PREFACE

This study was begun in 1937, with a thesis on 'Studies in Early Arabic Dialects' which I presented in 1939 for the degree of Pb.D. in the University of London. At that time, under the influence of Vollers, I concentrated upon the 'Eastern Dialects', and only later came to realize the special position of the Western Dialects and the existence of the West-Arabian language, and decided to present first this part of my researches. I hope to publish at a later date my material on the Eastern Dialects and my lexicographical collections.

When I began work upon my thesis, it was with the mental reservation that I would abandon the subject if after three months I had not found enough material to justify going on. I soon discovered that there was more than could be digested in a lifetime. The matter presented here is therefore no more than a selection of available data, and I could hope for no better fate for this book than that it should rapidly become out of date. The great potential importance of the pre-classical Arabic dialects for the study of Arabic and of comparative grammar has in recent years been stressed by such connoisseurs of the material as Kampffmeyer and Reckendorf. A welcome revival of interest is proved by the appearance of the excellent studies of the lamented Dr. H. Kofler and my fellow student of pre-war years, Dr. Ibrahim Anis. The present volume proceeds on entirely different lines of investigation and in some ways complements these two works.

It is an agreeable duty for me to thank all those who have given me help in preparing this book. First and foremost I must mention Professor H. A. R. Gibb, whose advice and encouragement accompanied my labours through all stages. In the many hours he has so generously given to reading my successive drafts and discussing my doubts and difficulties, many ideas were born without my being able to say whether they were his or mine. His share in the book is thus very large and real, though impossible to acknowledge in detail.

Hardly less great is my debt of gratitude to Professor A. S. Tritton. As my supervisor he guided me in my first halting steps, freely gave me valuable hints from his wide reading, and restrained me from many a pitfall. For valuable advice on points of detail I am much indebted to Professor W. R. Firth, to Dr. A. F. L. Beeston, Dr. J. Schacht, Professor Marcel Cohen, and Dr. F. Krenkow. I am very grateful to Professor G. R. Driver, Dr. R. Serjeant, P. Edmund Beck, Professor J. Cantineau, and Dr. S. Glazer for communicating to me, often at considerable cost of time and labour, and allowing me to use, results of unpublished work of theirs.

I also thank the staffs of the Griffith Institute and the Bodleian Library in Oxford, and the British Museum and School of Oriental and African Studies

X PREFACE

Library in London for their patience and kindness in facilitating my work, and in particular the Library of the India Office for lending me twice for lengthy periods the precious MS. of Ibn Malik's Tashīl.

I have used the transliteration recommended by the Royal Asiatie Society, but have inserted hamza also in the initial position and noted 'alif maqsūra, when written with $y\bar{a}$ ', by the symbol \ddot{a} , which is not meant to indicate anything about the phonetic character of that sound (cf. § 10 bb). The common Classical 'imāla' is indicated by \bar{w} , the 'Hijazi 'imāla' (cf. § 10 x) by \bar{e} . As for tanwīn and $t\bar{a}$ ' marbūta, these have been omitted wherever this would not have given rise to ambiguity. Hypothetical 'proto-Arahian' forms have been provided with the ending -u. To diminish as far as possible the appearance of diacritical marks, I have omitted them in names of the more common tribes. Colloquial words are spelled as I found them in the sources.

With regard to Koran quotations I have followed recent usage in giving first the verse numbers of Flügel and then, if they differ, those of the Egyptian Royal Koran. In dates the first number is, of course, the year of the Hijra, the second the year A.D.

BIBLIOGRAPHY

Modern works dealing with the dialects.

- P. Anastase Marie: Al-lughāt wal-lathaghāt, Mashriq, vi, 529-36, 589-93. Mainly a list of the descriptive terms applied to the dialects. Based on late sources.
- 'Anīs, Ibrāhīm: Al-lahajāt al-'arabiyya, Cairo, c. 1946. A critical study, based on wide reading. The author is mainly interested in phonetical differences, and minimizes the value of grammatical and syntactical data.
- Barth, J.: Das arabische s-Suffix der zweiten Person siog. fem., WZKM, xxiv (1910), 281-6.
- Blau, O.: Altarabische Sprachstudien, ZDMG, xxv (1871), 525-92. Mainly concerned with dialect differences in the first four centuries A.D.
- Bravmann, M.: Materialien und Uotersuchungen zu den phonetischen Lehren der Araber, Göttingen, 1934.
- id.: Some aspects of the development of Semitic Diphthongs, Orientalia, viii (1939), 244-53, ix (1940), 45-60.
- Freytag, W.: Einführung in das Studium der arabischen Sprache, Bonn, 1861. Pages 65-125 are devoted to the dialects. Material is arranged by dialects, but uncritically gathered mainly from Muzhir and Turkish Qāmūs.
- Kampffmeyer, G.: Beiträge zur Dialektologie des Arabischen I, WZKM, xiii (1899), 1-34, 227-50.
- id.: Die arabische Verbalpartikel b (m), MSOS, iii (1900), 48-101 and Marburg 1900.
- Kazem Beg: Observations sur le chapitre inconnu du Coran, JA, 1843, pp. 373-429. Discusses various, rather fanciful, forms of the definite article.
- Kosler, H.: Reste altarabischer Dialekte, WZKM, lxvii-xlix (1940-1942).
 Fullest collection of data to date, assembles not only forms attributed to specific dialects, but also unspecified material from the whole field of grammar. Arranged under grammar headings; no attempt at geographical treatment.
- Landberg, Comte de: La langue arabe et ses dialectes, Leiden 1905.
- id.: Dathina, Leiden 1905-1913.
- id.: Glossaire Dathinois, Leiden 1920-47. Draws on the older dialects to illustrate a modern Yemenite colloquial.
- Nöldeke, Th.: Das klassische Arabisch und die arabischen Dialekte, in Beiträge zur semitischen Sprachwissenschaft, Strassburg 1904, pp. 1-14.

- Rabin, C.: La chute du hamza en arabe hijazien et en hébreu moderne, Comptes Rendus du GLECS III, 77-9.
- id.: The ancient Arabic dialects and their relation to Hebrew (Hebrew), Melilah, ii (Manchester 1946), 243-55.
- id.: Archaic vocalization in some Biblical Hebrew names, Journal of Jewish Studies, I (1948), 22-6. Deals with the 'taltala'.
- Rāfi'i M.S.; Tārikh 'ādāb al-'arab, I, Cairo, 1912. On the dialects, pp. 103-58. Rarely mentions his sources, but where he can be checked he is reliable. Contains some material I have not found elsewhere.
- Sarauw, C.: Die altarabische Dialektspaltung, ZAss, xxi (1908), 31-49. First reasoned geographical discussion of dialects.
- Schwarz, P.: Der Diwan des Umar ibn Abi Rebi'a, Heft iv: Umars Leben, Dichtung, Sprache, und Metrik, Leipzig, 1909. The only existing description of any particular Arabic dialect, in this case the Hijazi.
- id.: Der sprachgeschichtliche Wert einiger älterer Wortschreibungen im Koran, ZAss, xxx (1915-6), 46-59. Uses Koranic spelling to reconstruct the Hijazi dialect.
- Vollers, K.: Volkssprache und Schriftsprache im alten Arabien. (Strassbg. 1906). Reconstructs an assumed 'popular language' from non-canonical Koran readings. The material in the ancient dialects is collected from Muzhir and similar late works, and the conclusions drawn from it are often too daring. The book contains, however, many valuable ideas, and is important for any student of early Arabic.
- Weil, G.: Die Behandlung des Hamza-Alif im Arabischen, ZAss, xix (1906), 1-63. Without intending to deal specifically with Hijazi, this careful article, based on the best Arab grammarians, throws much light on that dialect. Its statements have for our purposes to be checked with the spelling of old Korans (described in Nöldeke, Geschichte des Korans, 2nd ed.), which often differs from the grammarians' rules.
- Yāzijī, Nāṣīf: Kitāb mumayyazāt lughāt al-'arab, Acts of Seventh Or. Congress (1886), ii, 69-104. Rich collection of data, but sources are not named, and the author lays himself open to the charge of hasty generalization. He also freely invents 'examples'.

List of abbreviations, editions used, etc.

Chapter 1

INTRODUCTION

This book is an attempt to evaluate from a comparative and geographical point of view the data preserved by Arab philologists about the phonetics, grammar, and syntax of a group of pre-literary Arabic dialects.

There is no need to justify the study of the ancient Arabic dialects. They are likely to throw light not only upon Classical Arabic and the modern colloquials, but also upon Semitic in general. Classical Arabic is remarkable for its archaic character. How much more so should be the dialects that preceded it in time and, if Classical Arabic were to any extent a mixed idiom, represented a more direct line of development from proto-Semitic? If anything has so far caused these dialects to receive little attention, it was not lack of importance, but the impression one gained from the available material, scattered, uncorrelated, and often contradictory as it was, that it did not form a suitable basis for study. Freytag's list (in his Einführung, pp. 65-125) must have convinced many that the field was sterile. The excellent studies on points of detail which were undertaken subsequently (cf. Bibliography 1) did not do much to change this attitude, and the rich collection of material which we owe to the late Dr. H. Kofler's astounding industry and wide reading, is through its complete neglect of the geographical factor likely to discourage even further anyone who might have hoped to utilize the data on the dialects. It is hoped that this investigation will convince its readers, even if some of its conclusions should prove wrong in the light of increased knowledge, that an analysis upon strictly geographical lines produces results which make the study of the dialects worth while.

We owe to K. Vollers and C. Sarauw the discovery that the schematization of all dialect differences into Hijaz and Tamim which we find in Arab works corresponds to a real cleavage of the ancient dialects into an Eastern and a Western group. They were not the only ones, but we know too little of the others to take them into our consideration. The Eastern dialect group, comprising Tamim, Rabī'a, 'Asad, 'Uqail, Ghani and some other Qais tribes, has a considerable number of distinctive features. Upon closer consideration it appears that these are mostly comparatively recent linguistic developments, and that basically the Eastern dialects are the same as the Classical Arabic of the poets. Not so the dialects that were spoken along the great watershed of the peninsula and on its western slope. The common features of these dialects are less obvious—most of them became clear to me only after I had studied the material for over five years—but affect much more deeply the structure of the language. If we give due weight to the fact that all we know about any Arabic dialect is only a dim reflection of some

vague outlines, we shall admit that these dialects must have sounded to the Arab from Najd like a foreign language. In some respects they exhibit differences from Classical Arabie which go back to the proto-Semitic stage. They are more archaic, i.e., they have not shared in developments through which the latter idiom (or rather the dialects on which it is based) has passed. In other matters they have developed in a different direction. These developments are in several significant cases paralleled by developments in Canaanite on the one hand and in South-Arabian on the other. These dialects are what Arabie so conspicuously is not: a link between North-West Semitie and South-West Semitic (in Leslau's definition). Their character corresponds thus to their geographical situation.

What seems to emerge from these data is a language which, while closely related to Classical Arabic, has from very early times developed along different lines and against a different background—in fact a different language. I can as yet suggest no answer to the question whether this language and Arabic have a common origin separating them from Canaanite and South-Arabian—a kind of *Ur-Arabisch*—or whether they were separated right from the proto-Semitic stage. Since Semitic dialects are so close to each other, and there no doubt were many cross-influences, the question will perhaps never be answered. Treating the new idiom provisionally as an entirely separate entity, we may take a clue from the name South-Arabian, and call it West-Arabian.

Even more difficult than the problem of the relation of West-Arabian to Classical Arabic is that of its relation to the various idioms found in the North-Arabian inscriptions: Lihyanic, Thamudic, Safatene, the language of the en-Namāra inscription, and the Arabic which influenced Nabataean Aramaie. These dialects are taken together under the name of 'proto-Arabic'. This is a chronological term, and should not be taken to suggest genetic connection between them. I have a feeling that one or another of these idioms will turn out to belong to the West-Arabian group, with which all of them are certainly related as well as with Arabic proper. For the moment we bave not the means, on either side, for making any comparison.

Apart from these possible appearances in writing, West-Arabian was a non-literary language. Its speakers have left us no written monuments from which we might attempt to reconstruct their history or culture. Linguistic evidence in Yemen suggests that speakers of West-Arabian penetrated from the north in waves. The spread of the name Tayyi' (cf. § 14 a) is an admittedly very slight indication that at one time West-Arabians played a more important role in the north. Arab tradition, which groups all West-Arabians together, but jointly with other tribes, as 'Yemenites', claims on the contrary that these tribes emigrated northwards from the Yemen. A northern origin would certainly supply the easiest explanation for the surprising

similarities and parallelisms of West-Arabian with Canaanite. Further we cannot go.

When West-Arabians began to produce a literature, they did so not in their own language but in Classical Arabic. We give this name to the language of pre-Islamic poetry, while we call its standardized form, which was used as the international language in the Abbasid empire, Literary Arabic. In chapter 3 the opinions of European and Moslem writers about the origins of that language are summarized. It cannot be claimed that the investigations in this book enable us to give a definite opinion. I can, however, offer a working hypothesis which has stood me in good stead in the course of this research: Classical Arabic is based on one or several of the dialects of Naid, perhaps in an archaic form. Naid was an area where East-Arabians and West-Arabians met and mingled. In the west of the region the Ghatafan and Hawazin dialects were strongly West-Arabian, in the east those of Ghani and 'Uqail clearly Eastern. Between them were dialects which were possibly really mixed, with an Eastern basis, but of an archaic character as compared with the Eastern group. Above all they lacked the tendency to the reduction of short unstressed vowels so noticeable in the Eastern dialects of Tamim and Rabi'a. This area was thus neither purely Eastern Arabic nor purely West-Arabian. It was the scene of various attempts to transcend the tribal organization: the empire of the Kinda and the Qais confederation. Here, apparently, Arabic poetry came into being. Just as in Spain lyrical poetry carried everywhere the idiom of its Galician cradle, so the new Arabic poetry spread together with the language in which the first poems had been composed. In view of the mixed character of the area it is likely to have been a compromise between Eastern Arabic and West-Arabian right from the outset. In its phonetic character (fullness of vocalization, absence of violent assimilation, etc.) it resembled more the West-Arabian type; in its grammar more the Eastern Arabic. The needs of poetical diction and of metre may have done something to shape it still further.

Already before Islam this language was widely employed by poets whose spoken language differed strongly from that of Najd. Some local varieties developed, which admitted to a very limited degree features, especially vocabulary, of non-Najdi dialects. The unity of the poetical language was assured by the close cultural links which developed at the same time, and the meeting of poets from many tribes at the courts of Hira and Ghassan and at commercial and religious centres.

Such a local type of Classical Arabic was employed in the Hijaz for poetry and perhaps also for writing in general. This is the idiom in which the Koran was spoken and recorded. The pronunciation of the literary language in the mouth of Hijazis was of course largely accommodated to their native

dialect, to which Koran spelling is therefore a fairly reliable guide. In morphology, on the other hand, an almost complete conformity with the 'Arabiyya' could be achieved; the few Hijazi forms, such as the triliteral jussive and imperative of verbs med. gem., only appear sporadically. In syntax the situation is more complicated. While the simpler rules of literary Arabic are observed, the conflict between native and acquired speech habits sometimes caused dislocation in more involved constructions, from which we can discover the nature of the original Hijazi phrase. To a smaller extent such features of West-Arabian can also be discerned in the style of the Hijazi and Ta'i poets.

It would, however, he rash to conclude that every deviation from grammarians' standards in Koran or Western poets is a pointer to West-Arabian forms. At the present stage it is only with the help of express statements of the ancient grammarians that we can recognize such survivals as West-Arabian.

It is bardly necessary to stress that our approach is essentially different from that of K. Vollers in his 'Volkssprache und Schriftsprache im alten Arabien'. He rejected the official text of the Koran as a grammarians' fabrication and sought its original form in the non-canonical variant readings. This reconstructed text he believed to be representative of a 'popular language', opposed to Classical Arabic above all by its lack of cases and moods. I accept the Othmanie text as a true presentation of the language Mohammed used, but believe that his literary diction contained some elements of the spoken idiom of his milieu, which happens to be a specimen of an otherwise lost language. As for the variant readings I hold that some of them (not always those used by Hijazi readers) also preserve Hijazi dialect features, in some cases even features which the Prophet would have excluded from his own style as too dialectal. Which readings are of value to us in this connection, is again a matter which can be decided only with the help of the ancient philologists. As there are readings coloured with Hijazi dialect, so there are others coloured with Eastern or with colloquial features.

Thus we see our West-Arabian dialects only through the veil of the literary Arabic used by their speakers. But what of the dialects themselves? Many features discussed in this book suggest that the Hijazi dialect was not pure West-Arabian, but had undergone a profound influence of Arabic dialects such as those on which Classical Arabic was founded. This influence is more strongly discernible in the Hudhail dialect, but even in the Yemenite dialects it is not completely absent. What we have is, therefore, West-Arabian in course of dissolution, with forms rapidly succeeding each other in ever closer approximation to Arabic. In fact the literary Arabic employed by Muhammad and the vernacular of Mecca and Medina seem to bave been

merely different stages in the transition from West-Arabian to Arabic. It is not unlikely that there were also individual variations in the degree to which Arabic forms were accepted. For all these reasons we are well entitled to believe that full-fledged West-Arabian was much more distinct from Arabic, since even its broken-down remnants, visible only through mistakes made in the use of Arabic, still betray such deep-going differences. We are approximately in the position of a linguist who would attempt to reconstruct the character of German from the mistakes made in the use of English by semi-educated speakers of hybrid Pennsylvania 'Dutch'.

Chapter 2

THE ARAB PHILOLOGISTS AND THE DIALECTS

a Since our investigation is in the first line based upon information collected from the works of Arab philologists, we should try to gain some insight into their methods and attitudes with regard to the non-literary dialects. This will, among other things, show us how far we can trust their data.

b Above all we must fully realize that to the Arah philologist the recording of dialect data was a sideline, something that did not form part of his proper business of codifying the laws of the Classical language. At best he would exhibit them to impress readers with his learning, at worst he would use them to prove some point utterly unconnected with them. Neither approach made for exactitude. There were many further reasons for falsification of dialect data, which will be discussed in the following paragraphs.

c Several early philologists wrote works under the name kitāb al-lughāt, or the like. None of those mentioned in the bihliographies has so far come to light, so that we cannot say whether they were works on dialects or collections of rare words. The following are the titles known to me, in rough chronological order:

1. Kitāb al-lughāt by Yūnus b. Ḥabīb (d. 152/769 or 182/798), cf. Fihrist

ed. Flügel, p. 42.

2. Id. by Farra' (d. 207/822), cf. Fihrist, p. 67.

3. Id. by Abū 'Ubaida Ma'mar b. Muthannā (d. 210/825), cf. ibid. p. 54.

Id. by 'Ahū Zaid al-'Ansārī (d. 214/829), cf. ibid. p. 55.

- 5. Kitāb lughāt al-Qur'ān, by the same, cf. Flügel, Die grammatischen Schulen, p. 72.
 - 6. Kitāb al-lughāt, by 'Aṣma'ī (d. 216/831), cf. Ḥajji Khalīfa, v, 143.
 - 7. Id., by Ibn Duraid (223/837-321/933), cf. Flügel, op. cit., p. 103.
- 8. Id., by 'Abdallāh or 'Umar az-Za'farāni or ad-Dūmī, cf. Fihrist, p. 84; Yāqūt, 'Irshād, vi, 47. The author, whose name shows bim to have been a native of Arabia, lived in the first half of the fourth/tenth century. Ibn an-Nadim calls him 'of recent date'.
- 9 Id., by Ibn Barrī (d. 582/1187), quoted Lisān, xx, 194. The quotation does not refer to dialect matter.
- 10. Kitāb as-sabab fī ḥaṣr lughāt al-'arab 'Reasons for the restriction of the Arabic dialects (or vocabulary?)', by Husain b. Muhadhdhab al-Miṣrī (before 650/1252), ef. Suyūṭī, Bughyat al-wu'āt, p. 236, from the Mughrib of Ibn Sacid.
- 11 (?). A kitāb al-lughāt is mentioned by Ibn Khālawaih (d. 370/980) in his Kitāb Laisa, ed. Shinqīţī, p. 42.

d 12. We possess only one monograph on dialects. This is a treatise ascribed to 'Abū 'Ubaid Qāsim b. Sallām al-Herewī (d. 223/838), entitled Risāla fī mā warada fī l-qur'āni min lughāti l-qabā'ili 'Treatise on dialect words in the Koran'. The work was published on the margin of the litbographed edition of Dīrīnī's Taisīr fī 'ilm at-tafsīr (Cairo 1310), and reprinted on the margin of the Tafsīr al-Jalālain (Cairo 1356). Suyūṭī, in bis 'Itqān (p. 310), quotes extensively from a monograph (ta'līf mufrad¹) of 'Abū 'Ubaid on this subject. The quotations are largely identical with the material of our Risāla, but are arranged by dialects, while in the Risāla the items are in the order of the Koranic passages which they comment. Also, Suyūṭī quotes authorities, while the printed text never mentions any. Perhaps both the Risāla and Suyūṭī's quotations are drawn from a fuller work of our author.

e The data in the Risāla differ from those we find in the lexica. The latter never seem to quote it by name, and only in very few cases give dialect provenience to the same words. Where they do, they tend to confirm the Risāla. The Risāla ascribes words to dialects that are never mentioned in other works. The most surprising of these is the language of the Jurhum, a tribe of the 'Arab al-Bā'ida, on the coast near Mecca. Remnants of that tribe were known to Muḥammad al-Kalbī (d. 146/763; quoted by 'Azraqī, 'Akhbār Makka, cd. Wūstenfeld, p. 54; cf. Nöldeke, Fünf Mu'allaqāt, iii, 27, n. 2). It is thus possible that 'Abū 'Ubaid, or his informant, still heard their language spoken. The dialect meanings recorded in the Risāla hardly ever fit the passage they are supposed to elucidate, a circumstance which lends some verisimilitude to the information. It is probable that further material is to be found in 'Abū 'Ubaid's unpublished Gharīb al-muṣannaf.

f The authors of the monographs listed above were lexicographers; Farra' a representative of the Kufan school. The grammarians of the Basrian school evinced little real interest in the dialects. Sibawaih mentions mainly such usages as were permissible in Arabic as he conceived it. He subjects these to the same qiyas method as any other material. Since the dialects as such meant nothing to him, he had no hesitation in reducing differences largely to a schematic opposition of Hijaz and Tamim (which shows that be clearly realized the distinction between West-Arabian and Arabic). Most of the later grammarians had even less interest in the dialects, and omitted even some details which Sibawaihi noted. It was only the later eclectic and encyclopædist grammarians, such as 'Astarābādī (d. 683/1287) and Suyūṭī (d. 911/1505), who collected all dialect data they could find in order to achieve completeness. Ibn Mālik (d. 686/1287) appears to bave had some interest in dialects for their own sake. He mentions them frequently in the Tashil, and even in the 'Alfiyya. Perhaps it had already become fashion to be expert in such linguistic curiosities. The commentators of Ibn Mālik—Ibn 'Aqīl, 'Ushmūnī, and Suyūṭī—arc valuable secondary sources who have preserved for us many data from lost works. One of these commentaries, the mammoth work of 'Abū Ḥayyān, is recommended by Qalqashandī (d. 821/1418) as the best source of information about the dialects (Ṣubḥ al-'a'shā, ii, 233). We may note in passing the curious fact that a knowledge of such things was considered of value for a civil servant.²

g The lexicographers were of course more interested in dialect words, and not only in those that occurred in poetry. On what principle they included such words, is impossible to make out. There certainly was no attempt at being systematic. Ibn Duraid and Nashwān had a particular delight inwords of dialect origin, and included in their dictionaries especially many Yemenite words. Yet Ibn Duraid rarely gives any material for his own 'Azdī dialect³. The commentators of Dīwān Iludhail did not consult living members of that tribe, which dwelt within easy reach of Mecca. The only more or less systematic presentation of a dialect which ever existed, the seventh volume of Hamdānī's Iklīl, devoted to the Himyaritic language, has unfortunately been lost. Later lexicographers were not specifically interested in dialect matter. Even the Lisān often omits such data from its quotations of earlier works.

h Most of the dialect features treated in the grammars were those found in literary sources and considered fasih, correct and elegant Arabic. These were submitted to the same casuistic treatment as any other phenomena of the literary language and were hedged in by rules of an entirely artificial character. In some cases, as with the Ta'i $dh\bar{u}$ 'which' (§ 14 v) this grammatical discussion led to the adoption of forms and constructions alien to the dialect from which the words came. Other features were included because they occurred in recognized poetry or in the Koran, and had somehow to be accounted for. In these cases the grammarians are often satisfied with the mere statement that 'this is the author's dialect', or 'this is according to the dialect of . . .'. A third reason for quoting dialect usage was that it sometimes supported some theory about the character of a literary Arabic construction.

i Once it was recognized that a form which did not conform to the rules of literary Arabic might be dialect, the temptation was at hand to seek here an easy explanation for anything for which one could not account by the rules one had made oneself. To give one example out of many: 'Andalusi (quoted by 'Astarābādī, Kāfiya comm., ii, 117) believes to find in a verse kai meaning kaifa 'how'. He adds: 'cither this is the dialect of the poet, or the -fa is dropped as a poetic license'. Any faint similarity to a known dialect peculiarity is exploited, without considering the probability of the author's using that dialect. Thus phrases in the Diwān Hudhail are explained from the Tamīm dialect, etc. Even worse, 'dialect words' are freely

invented to justify some theological idea or simply to find a meaning to a Koranic phrase. Thus the letters we at the opening of Sura xxxvi are said to represent yā sīn, said to mean 'o man' in the dialect of Tayyi', the letters whi in Sura xx, to mean 'o man' or 'o thou' in the dialect of 'Akk (Baiḍāwī, ii, 156; i, 591). The Greek loanword 'iqlīd 'key' is made into Yemenite dialect because it occurs in a line of poctry ascribed to 'Tubba' (Lisān, iv, 368).

k Borrowing from different dialects was proffered as an explanation for the 'addad, the words with two (real or imaginary) opposite meanings. When a sound-complex (harf) has two incompatible meanings it is absurd to believe that the Arabs should have used both simultaneously. These words were employed by one tribe with one meaning and by another with the second. Later on the tribes became acquainted with each other's usage, and mutual borrowing ensued' (Ibn al-'Anbārī, 'Addād, p. 7). It was only a step from this to the naive attitude expressed by 'Abū 'Amr b. al-'Alā' (d. 154/771), one of the founders of the Basrian school. Asked by the father of the traditionist Ibn Naufal whether he accepted every usage of the Bedouins as good Arabic, he replied in the negative, and declared: 'I follow the majority and call everything that contradicts my own view (mā khālafanī) dialect' (Suyūţī, Muzhir, i, 111, from Zubaidī, Tabaqāt an-nahwiyyīn). We need not take the 'majority' criterion too seriously, as several usages current among the majority of desert Arabs, such as the taltala (§ 6 i) were rejected by the grammarians.

I Apart from pure inventions of this kind, the tendency to account for existing alternative constructions of Classical Arabic by means of dialects led often to an unwarranted sharpening of differentiations. If a construction, which was for any reason in discord with grammatical theory, could be found in a dialect, or in texts by members of a tribe, it was often simply declared a dialect usage. An instance of this is the use of a predicate with generic $l\bar{a}$, which because of its occurrence in the Koran was declared a Hijaz dialect construction. From this the further conclusion was drawn that it was used nowhere else, and when it was found in a poem by Hātim Tā'ī, that poet had 'abandoned his own dialect' (§ 13 q). The basic cause of such confusions is the lack of a clear conception of the relation between Classical Arabic and the dialects, cf. the next chapter.

m A fertile source of confusion is the homonymy of the word lugha. This can mean 1. speech in general, 2. ordinary usage, as opposed to technical language (istilāh), 3. the Classical Arabic language, 4. lexicography, as opposed to grammar and syntax, 5. a word, 6. a permissible alternative expression, 7. a dialect, 8. a provincialism or dialect expression. Often an earlier writer might say that a form was lugha fī 'an alternative form for . . .'; a laterauthor, quoting him, would substitute fī ba'di l-lughāt 'in some dialect',

or vice versa. The restrictions placed by some writers on the use of lugha do not make matters any clearer. E.g., 'Astarābādī (Kāfiya comm., ii, 31) in discussing $h\bar{u}l\bar{a}$ 'i for $h\bar{a}$ ' $\bar{u}l\bar{a}$ 'i, says: 'it is not a lugha, but a shortened form of $h\bar{a}$ ' $\bar{u}l\bar{a}$ 'i'. Apparently lugha does not mean a dialect form in this context, but a form which cannot be derived from the normal one by simple phonetic substitution. This is certainly not the usage generally followed.

n It is no wonder that some philologists lost sight of the fact that a dialect is connected with an ethnie group. In Suyūṭi's Jaın' al-jawāmi' (i, 37) we find the following passage: 'Some say that the treatment of diptote nouns in prose as triptotes is the usage of the dialect of some Arahs. This view originated with 'Akhfash, who said that it was the dialect of the poets, because by employing this as a poetic liecnse they became so used to it that it became current in their everyday speech.' One came even to talk of dialects of Basra and Kufa, meaning the forms approved by Basrian and Kufan grammarians (Kofler, WZKM, xlviii, 264). But those who realized more clearly the implication of the term dialect were not always right in applying it. Discussing Farrā's view that mundhu is composed of min and the relative dhū, Ibn Ya'īsh objects: all Arabs use mundhu, but only the Tayyi' have dhū. How can a word which all use have an element restricted to one tribal dialect? (p. 1103). In spite of his logic, he was wrong, cf. § 13 pp.

o A certain amount of our data on the dialects consists of the type of linguistic oddities people like to attribute to their neighbours. While they contain a core of truth, they are no doubt often exaggerated and misinterpreted, like the popular versions of Welsh Il or the French belief that Germans say p for b and vice versa. Many dialects were known popularly by nicknames taken from some striking feature, such as ghamghama, 'aj'aja, 'ajrafiyya, rutta, etc. (cf. § 3 l and the index). Most of these, when analysed, mean no more than 'shouting', 'bellowing', 'moaning', 'talking gibberish', or similar kindly epithets (just as in Germany every region is accused by others of 'singing'). This was not good enough for the philologists, who sought to narrow these vague terms down to some tangible grammatical detail. Either they identified the name with some well-known dialect feature or, where no suitable feature was known, they more or less invented one. The 'an'ana of Tamim was made to refer to the fact that that tribe said 'an for 'an; therefore the 'aj'aja of Quda'a and Tayyi' must mean that they said 'ij for 'i (§ 14 m). These terms became the stock-in-trade of the popular grammarian, and the whole approach to the dialects was centred around them. A good account of the traditional values attributed to these names is to be found in the article Al-lughāt wal-lathaghāt by Père Anastase in Mashriq, vi, 529-536, 589-93.

p There were thus at the very source of the material with which we have to deal many causes that tended to falsify and distort the data. Subsequent

tradition, consisting in the copying of statements by each writer from his predecessors, is also responsible for a good deal of uncertainty in our knowledge of the dialects. On some occasions we find authors flatly contradicting each other, both in the description of the phenomena and in their attribution to specific tribes. Names of tribes that were similar in spelling or sound often gave rise to confusion, especially as they seem to have meant very little to even the early philologists. Freytag (Einführung, p. 76) lists features of the 'Azd and 'Asad dialects under one heading. Other confusions that I bave found occasionally are Hudhail and Ḥanzala (section of Tamīm), Tamīm and Yaman. Such mistakes are not too frequent and can mostly be easily discovered.

q Much more disturbing than this is for our purposes the tendency to substitute a larger tribal grouping for a smaller one. Thus we often find the names of sections of Tamīm, whose dialects seem to have differed rather strongly, replaced by Tamīm; or Kināna, Khuzā'a, Medina, the 'Āliya, etc. by Hijaz. This is particularly annoying when such larger groupings cut across important dialect boundaries, as in the case of Qais, which confederation included speakers of Western and Eastern dialects. An absurd case is the use of 'Yemenite dialect' for tribes in various parts of Arabia who claimed a 'Yemenite' genealogy. The most frequent method is to group Western usages under Hijaz and Eastern ones under Tamim. This was already largely done by Sībawaihi. Suyūţī names the chapter of his Muzhir which deals with the dialects (ü, 175-8): 'Differences between the dialects of Hijaz and Tamim', although in his other works he is not prone to this schematization. When one of the two type-dialects differed from Classical Arabic, the Classical form was often simply attributed to the other. Because mā with the predicate in the accusative is Hijazī, mā with the nominative is called mā Tamīmiyya (Ibn Mālik, Tashīl, f. 22 a). Because the Tamīm inflected halumma (§ 12 z), the uninflected halumma is made Hijazi dialect ('Astarābādī, Kāfiya comm., ii, 72).

r While realizing all these sources of error, and applying due criticism to the information supplied by Arab sources, we must also beware of falling into the opposite error of believing that the data are worthless. I hope to have shown in this book that on the whole they fit into a coherent system of geographical distribution. One must above all beware of rejecting a form because it is unique. Often the seemingly absurd turns out to be wellfounded. D. H. Müller in 1877 (Südarabische Studien, p. 21) rejected the 'Himyaritic' $d\bar{u}$ 'not' as 'im Semitischen undenkbar', while in fact it is one of the best-authenticated features of southern Yemenite (cf. § 4 bb). There is no doubt that we are in possession of a solid body of data derived from observation. It remains to review the nature and provenience of these data.

s Many of our statements are framed in such a way as to imply personal contact with dialect speakers. Phrases such as 'I heard a man of the . . . tribe say', 'I was told by a man of the . . . tribe that such-and-such was their usage', recur constantly. Often precise details are given about the informant's age, etc., or about the circumstances of meeting. An instructive example is the following: "Abū 'Ubaid (d. 223/838) reports from al-Hasan; we did not know what al-'ara'ik meant until we met a man from Yemen who told us that his countrymen used the word 'arīka to denote the canony under which the bridal bed is creeted' (Suyūţī, 'Itgān, p. 310). Another interesting story is that of 'Abū 'Amr (d. 154/771) settling a point of dispute by sending out two emissaries to test the reactions (laggana) of a Hijazi and a Tamini to a certain construction. Each insists on his own dialect usage and cannot be brought by any means to admit that of the other (Ibn Hisham, Mughni, i. 227). This story actually is suspect, not only because it presupposes that bedouins in the second century still spoke pure dialect, but also because it savours too much of the idea that 'a bedouin cannot make his tnngue utter a faulty expression' (Khizāna, ii, 130). We must confess the same hesitation with regard to the dietum of Jarmi (d. 225/840): 'I started out from the most of Kufa and travelled all the way to Meeca, but I never heard anyone use other than the accusative in the construction idrib 'ayyahum 'afdalu 'strike whichever of them is the most excellent' ('Astarābādī, Kāfiya comm., ii, 57).4 This presupposes the general use of the case endings in the late second century. There is little reason to believe that these sayings do not derive from the persons to whom they are attributed, or that they were not uttered with full sincerity. They illustrate a point which is very important to our subject: that the tendency to self-deception on linguistic matters was no less strong among ninthcentury Arabs than it is among present-day literary men and schoolmasters in Europe and elsewhere.

t Much of the information on dialects was probably not collected in the desert, but in the cities of Iraq from bedouins who lived there, and were attached to the grammatical schools. Flügel (Grammatische Schulen, p. 45 seq.) gives a list of such 'native assistants', most of them hailing from Eastern tribes. The eagerness with which new arrivals from the desert were met suggests that most of them soon lost their contact with living bedouin speech (cf. Goldziher, JRAS, 1897, p. 326, note 1). These bedouins had a reputation of providing, against suitable payment, any 'information' their interlocutors desired (cf. Ibn Hishām, Mughnī, i, 81; Taha Ḥusain, Al-'adab al-jāhilī, p. 180). They would of course be particularly unreliable on matters pertaining to dialects other than their own. It must be pointed out that names of such bedouin informants hardly, if ever, appear in our data; but they also are almost never mentioned in connection with Classical Arabic

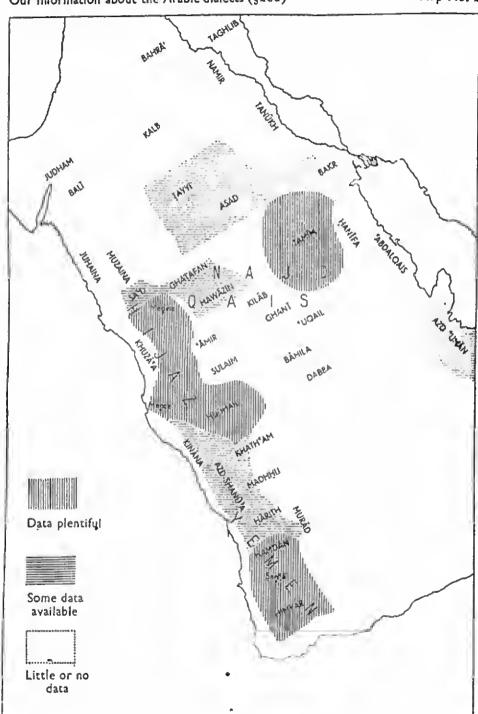

matters. It was ohviously not required of the philologist to specify his 'native' source (cf. also § 3 s).

u Another source never mentioned, but probably of considerable importance, were the traditions current in Arab families about their ancestral speech, the linguistic peculiarities of aged relatives, and expressions current in noble families proud of their tribal ancestry. Obviously this was not a very reliable source of information, as the individuals concerned were under the influence of the koinē spoken around them. It may, however, have contributed towards throwing into relief the more salient features of the dialects.

v It would be difficult, if oot impossible, to discover why the philologists recorded just those dialect features they did. There is certainly no system in it. They never considered dialects as forms of speech in their own right, hut as collections of curious deviations from the literary language. All their data are measured on Classical Arahic, and we can often see quite clearly that they failed to see anything that did not fall within the categories of that idiom. But even if we grant this limitation, there is still a large amount of dialect forms and usages of which we learn in an indirect way, which must bave struck the ear of any Arabic speaker and yet were not recorded. An instructive example is the casual and misleading way in which an important difference like the Himyaritic -ku for the first person sing, of the perfect is mentioned—in a lexicon; the grammars never say a word about it (§ 5 r). Perhaps one reason is that Arab philologists were not really interested in what we should call accidence, a discipline which was covered adequately neither hy sarf nor hy nahw. The net result is that we have a great deal of information on minor points of dialect usage, but get only occasional glimpses of the hasic forms. We cannot reconstruct the complete paradigm of any tense in any dialect; we can hardly say with certainty what a complete word may have sounded like. The few glimpses we obtain prove that there were profound differences, the full nature of which will probably never he revealed to us.

w It cannot he strongly enough stressed that we do not possess a single sentence in genuine dialect, apart from the Himyaritic material. The examples we find in our sources are no doubt in many cases constructed by the grammarians, not taken from the mouth of dialect speakers. Where the sentences were quoted from actual speech, only the essential word or words were given in their original form and the rest remade according to the rules of literary Arabic. We must remember that it was often impossible for the Arabic script to express dialect sounds, just as it is inadequate to-day for writing the colloquials. This process of 'normalizing' was continued by the copyists.

x Apart from the examples of the philologists, we shall often have to deal with verses from poets and with the Koran. Both of these are indirect

sources that can only be used with great eaution. They are literary Arabic texts in which dialect features only enter as unintentional deviations from the norm the authors set themselves. What we get is not pure dialect but a compromise between dialect and Classical Arabic. Copyists and systematic correction by philologists have in both types of text served to obscure still further the character of the provincialisms in them. The dialect in these texts plays a very similar role to that of the Canaanite language in the Tell Amarna letters. The successful recovery of so many features of old Canaanite from those letters should give us courage in dealing with the Arabic material.

v In the case of poetry there is the special problem of authenticity. It is not much good basing linguistic conclusions on a verse which was not written by a member of the tribe which the alleged poet represents. Perhaps one day our knowledge of the dialects and of the provincial variations of Classical Arabic will be sufficiently advanced to provide us with linguistic eriteria for judging the authenticity of a line or a poem. At present we can accept material from poetry only as cumulative evidence,5 and for that the necessary preliminary studies are still lacking. One wishes that every editor of early poetry would provide us with a careful study of his poet's language as Schwarz has done in his edition of 'Omar b. 'Abī Rabī'a. Such a study is not only of value to the advancement of Arabic linguistics as a whole, but would place the edition itself on a much sounder basis. The verses quoted in this volume, mostly the shawāhid used by the philologists themselves, are meant to serve as examples, not as evidence for the existence of the phenomenon they illustrate. For that reason in most cases it does not matter much whether they are genuine or not.

z The philologists speak invariably of fixed dialect units. These are rarely localities (Mecca, Medina, Tā'if) or small tribal sections (these especially in the case of Tamîm and 'Asad), but mostly either large tribes or tribal confederations (Tamīm, Qais) or large and ill-defined regions (Yemen, Hijaz, Nejd, Tihāma). Clearly we cannot satisfy the basic demand of linguistic geography, which is to start with the locality as basis. Nor can we draw isoglosses for different features. The investigations of linguistic geography have shown that dialects as such hardly ever exist. Local speech varies from village to village, and only occasionally one finds bundles of isoglosses large enough to give the feeling of a linguistic boundary. The real linguistic unit of the bedouin Arab was the hayy, the group of families living together, often in closer contact with similar groups belonging to other tribes than with the rest of its own tribe. There is no definite proof that the tribe did constitute a linguistic unit. With regard to the larger geographical units, it is often certain that linguistic boundaries ran across them. Yet we cannot hut accept the localization of our material as it is. Geographical linguisties in Arabia has the additional peculiarity that the linguistic unit was not stationary, but moved often over quite large areas. The locations given on our maps are therefore merely schematic indications. Some of them are likely to be wrong even within the vague sense attached to them, as we have no real geography of tribal Arabia.

aa We have fairly plentiful information only for three areas within Arabia: Hijaz (probably only the holy eities), Yemen, and Tamim. For other areas we have some information which permits us to recognize the general character of the dialects spoken there. For the rest of the dialects of the peninsula we have so little information that we must consider their language totally unknown (ef. map no. 2). Fortunately, the West-Arabian dialects fall entirely within the first and second categories. The gaps are, however, painful enough. They include the Quda'a tribes, who were in closest contact with North-Semitic and cover the territory in which all proto-Arabic inscriptions were found, so that we obtain no help for the better understanding of these early documents. Worse than that, they include nearly the whole of those Central-Arabian dialects which perhaps were the basis of Classical Arabic. The lack of interest displayed in these is all the more astonishing as most of the important early poets hailed from this area. Two explanations offer themselves, one that in the second to fourth centuries it was not easy for townsmen to establish contact with bedouins in this most nomadic part of Arabia, the other that just because these dialects had produced Classical Arabic, their differences from it were not sufficiently striking to attract notice.

NOTES

¹ I correct in the text of the 'Itqān 'akhrajahu for 'akhraja. Without this emendation the text seems to make little sense.

² Owing to the troubled times, I have not been able to see this work.

^a Ibn Duraid, who lived in Basra, perhaps did not know the 'Azd dialect at all, but drew his information from the Yemenites with whom he associated.

We naturally hesitate to accept statements such as 'ni'ma and bi'sa take the feminine t in all dialects' (Suyūṭī, Bahjaṣp. 81), and the like.

⁶ I.e. the more frequently a usage recurs in the work of a poet, the less likely its appearance is to be due to accident or forgery.

Chapter 3

VIEWS ON THE ORIGINS OF CLASSICAL ARABIC

Owing mainly to our scanty knowledge of the ancient dialects, all views on the relations between them and Classical Arabic are guesses or working hypotheses. Nöldeke (Beiträge, p. 1-14 and Semit. Sprachen, 2nd ed., pp. 54-5) thought that differences between dialects spoken in the main part of Arabia (Hijaz, Najd, and the Euphrates region) were small, and the literary language hased upon all of them equally. Guidi (Misc. ling. G. Ascoli, Torino 1901, p. 323) believed Classical Arabic to be a mixture of dialects spoken in Najd and adjoining regions, but not identical with any one of them. Nallino (Scritti, vi, 188 - Hilāl, xxvi (1917) 47), who connected the rise of Classical Arabic with the kingdom of Kinda, thought it was the colloquial of the Ma'add tribes united in that state. Fischer (ZDMG, lix, 662, note 4) held similarly that Classical Arabic was identical with one particular dialect, but does not specify which.1 Essentially the same is the view of Hartmann (OLZ, xii, 23). Vollers (Volkssprache, p. 184) evolved the hypothesis that Classical Arabic was based on the speech of bedouins in Naid and Yamama, but much changed by the poets, while in the rest of Arabia quite a different language, the ancestor of the modern Hadari colloquials, was spoken; that the Koran was composed in that popular Arabic and subsequently rewritten in Classical style. Brockelmann (GVG, i, 23), as Wetzstein and others before him, claims that Classical Arabic was never spoken in the form in which we know it; he does not discuss its relation to the dialects. Landberg (Prov. et Dictons, i, xxvii) says it was spoken 'on ne sait quand', but its grammatical form was largely due to the work of the poets. 'Anis (Lahajāt, p. 28) also denies that Classical Arabic was identical with any of the dialects. Marçais (quoted by Fleisch, Introduction p. 99) compares it with the artificial idiom of Homer.

b A question sometimes confused with, but really quite distinct from that of the origins of the Classical language is the role it played in the linguistic set-up of pre-Islamic Arabia. Here there is substantial agreement among European scholars that to most or all of those who employed it for writing poetry, Classical Arabic was to some extent a foreign idiom which had to be acquired. The situation among the ancient bedouins was in this respect just the same as among the Arabs of our own days, who compose their poetry in archaic and often extraneous dialects (cf. Socin, Diwan aus Zentralarabien, iii, 71; Doughty, Travels, ii, 27; etc.). In settled areas this language is often of a bedouin type (cf. Cantineau, Parlers, p. 4 note), exactly as it was in Hijaz at the time of Muhammad.

c There was just as substantial agreement among Moslem scholars, only that they held the opposite view. For them literary Arabie was identical with the spoken language of the bedouins. The nomad Arab was the final arbiter of correct Arabie. He could not speak wroog Arabic even if he had wanted to (cf. § 2 s). The less opportunity he had of acquiring a veneer of civilization the better. 'The best speakers of Arahic are those deepest in the desert' ('afşahu l-'arabi 'abarruhum) says a proverh (Lisan, v, 119).2 The philologist Farra' (d. 207/822) was rebuked by a hednuin for studying the language with the famous Yunus h. Habib when he enuld have done so much better in learning it from the 'Asad hedouins who dwelt near his home town (Nöldeke, Beiträge, p. 5). 'Abu Qilaba al-Jarını avers that the most elegant speakers of Arabic he ever saw were some Harith bedouins he met at Meeca (Mubarrad, Kāmil, p. 434). The idea of bedomin faṣāha is made the subject of a literary genre in the 'Amāli of 'Isma'īl b. al-Qāsim al-Qālī (d. 356/967). It seems that this view of the linguistic superiority of the bedouin was the corollary of the theory which attributed everything that was eonsidered incorrect to the influence of foreign languages on the speech of the settled population. This was part of the general idealization of early Islamic society and corresponds to the romantic hankering after the primitive in other urban societies. To some extent it was justified by the rich speech of the bedouin and his natural rhetorical ability, and by the fact that a tradition of Classical Arabic poetry still continued among the tribes for some centuries, as is proved by the Diwan of Hudhail. But there can he little doubt that the spoken language of the bednuin was different from the Classical idiom. It is hard to understand that the scholars never seem to have realized this. Perhaps they were able to abstract their minds from those bedouios with whom they eame in contact and to enneentrate on some ideal bedouin,3 Even to-day the traveller in Arahia is told about tribes, somewhere in the centre of the peninsula, who still speak the purest Classical Arabic. Whatever the reasons of this self-deception may have been, there is no doubt that the basic identity of Classical Arabic with the everyday speech of some Arabs was the guiding principle in the Arab scholar's approach to this question.

d With regard to the origin of Classical Arabic, the views of Arab scholars were as divided as those of the Europeans. If we present these views here in the form of a development, this must not be taken to imply that the various stages followed each other chronologically and that one opinion was abandoned as the other gained ground. I believe, though I have not enough material to prove it, that the three schools of thought described in the following paragraphs did in fact succeed each other within the space of one or two generations during the third century of Islam. We learn about them from much later works, where the three points of view are given side by

side, without any attempt at decision, so that later authors seem to hold several opinions simultaneously. Each point of view was further developed and we find it expressed in a form which may not be identical with that which it had originally.

e At first it seems to have been a commonplace that the literary idiom as used in the Koran contained elements of different dialects. 'Abū 'Ubaid (d. 223/838), who in his Risāla (cf. § 2 d) made a collection of such dialect words, puts his view in the introduction to that work as follows: 'parts of the Koran were revealed in the dialect of Quraish, others in that of Hudhail. others again in that of Hawazin, in that of Yemen, etc. Same dislects have a greater share in the Koran than others' (quoted Suyūtī, 'Itgān, p. 110).4 Ahū Bakr al-Wāsitī gives in his 'Irshād fī l-qira'āt al-'ashr a list of fifty dialects and eight foreign languages which contributed to the vocabulary of the Koran (qunted Suyūţī, 'Itqān, p. 313).8 Ihn 'Ahdalbarr (d. 463/1071) points out that some common features of the Koranic text, such as the preservation of hamza, contradict what we know of the Hijaz dialect (Suyūtī, ibid.). Ibn an-Naqīh considered this a proof for the uniqueness of the holy book ('i'jaz al-qur'an): 'Other hooks were revealed only in the language of the nation to whom they were addressed, while the Koran contains words from all Arabic dialects, and from Greek, Persian, and Ethiopic besides' (Suyūtī, p. 316).

f A slight twist is given to this idea in a statement ascribed to Ibn 'Abbās, in which he explains the seven 'aḥruf in which the Koran is said to have been revealed as seven dialect versions, five of them in the dialects of the 'a'jāz Hawāzin, one in that of Khuzā'a, and one in the Quraish dialect (Ṭabarī, Tafsīr, i, 22). Presumahly the versions in the other dialects were lost and only that in the Quraish dialect preserved. In this way the statement really represents the third school of thought, that equating literary Arabic with the Quraish dialect. It may also be noted that all the dialects mentioned in Ibn 'Abbās's statement are Hijazī.

g While these views were mostly expressed with reference to the Koran, they were no doubt held with regard to literary Arabic in general. Ibn Jinni insists on the mixed character of Classical Arabic as the only rational explanation of alternative forms and irregularities in the correspondence of perfect and imperfect vocalizations (Khaṣā'iṣ, i, 379). A similar view was expressed by 'Anbārī with reference to the 'aḍdād (§ 2 k). In another passage (i, 253), however, Ibn Jinnī claims that the differences between dialects did not go very far. They differed only in details (furū'), not in essentials ('uṣūl), and all dialect forms fit into the general grammatical system of the language (lahu mina l-qiyāsi wajhun).

h The popular idea of the origin of Classical Arabie among townsmen, however, seems to have been that it was identical with the dialect of one

tribe or a group of tribes. How little this was based on reality can be seen from the wide divergence of opinion as to the identity of that tribe. Nearly every tribe of the peninsula is said by some scholar to have been 'afsah al-'arab, 'the best speakers of Arabic'. Perhaps, when we find an early seholar like 'Abū 'Amr b. al-'Alā' (d. 154/771) asserting this of the Upper Hawazin and Lower Tamim (Suyūţi, 'Itqan, p. 109), he did not mean that they spoke the best Arabic, but that they were most expert in handling the language of poetry, using fasih in its original sense of 'cloquent'. The same may be the meaning of the story (Tabari, Tafsir, i, 14) that the Prophet arranged an inter-tribal contest in recitation and found that the Tamîm were most correct in the use of the case-endings ('a'rabu l-qaumi'). As pocts of that tribe played a prominent role in the literary movements of the first century, such a judgment would have been fairly correct about the year 100. The Thaqif of Ta'if, who were reekoned among the Upper Hawazin, appear to have enjoyed a fairly general reputation for fasāha. This can only refer to their literary skill, as their spoken language must have been of a purely West-Arabian type. They were more urbanized than any of their neighbours (cf. Lammens, Ta'if, p. 181). The Caliph 'Othman is said to have considered the ideal team for achieving a correct text a man of Hudhail dictating to a man of Thaqif (GQ, iii, 2, other version Ibn Fāris, Sāhibī, p. 28). That means that for the inventors of this story the Hudhail counted as models of correct literary usage and pronunciation, while the Thaqif were only recognized for their skill in handling the pen. Even this reputation of the Thaqif may have been artificially fostered for political reasons, so as to give wider currency to Hajjāj's revision of the Koran (ef. Blaehère, Introduction, p. 75).

i In the case of the Hudhail, we can see how this reputation for literary correctness was later misunderstood as applying to the dialect. Muqaddasî ('Ahsan at-taqāsīm, p. 97) says that 'the dialect of Hudhail is the most correct among all Arabs. After this comes the language of the two (?) Nejd, then that of the remainder (sic) of Hijaz, except that of the 'Ahgaf, for their speech is savage'. This can hardly refer to Muqaddasi's own time (c. 375/985). In view of the West-Arabian character of both the Hudhail and Hijaz dialects, it would at no time have been correct. Kofler (WZKM, xlvii, 64-5) gives a list of other tribes which were mentioned as 'most eloquent of the Arabs'. Among these we may call attention to the passage in Lisan (xvii, 225) where the palm, on the authority of 'one of the learned' is given to the Nasr Qu'ain or Qu'ain Nașr. There were sections called Qu'ain both in 'Asad and Qais; neither of these seems to have been in any way remarkable. One suspects the name stands for the tribe Whatsitsname, and the statement is meant as a parotly on those who searched Arabia for the source of linguistic infallibility.

k One of the strangest choices for the home of pure Arabie is the tribe of Jarm, on the coast north of Hijaz, which belonged to the Quda'a confederacy. In all probability these people spoke a dialect of a totally aberrant type, perhaps closer to 'proto-Arabic' than to the Arabic we know. They produced no poets of any fame and played no role in early Islamie history, thought they 'produced' some later grammarians. Perhaps they spoke a good Arabic because they had to learn it as a foreign language and therefore had no provincialisms. The linguistic superiority of the Jarm is the subject of an anecdote which is of some importance to our subject because it illustrates the rise of the dogma which equated the literary language with the Quraish dialect.

1 This anecdote occurs in Mubarrad (Kāmil, p. 364), Ḥarīrī (Durra, p. 114, ed. Thorbecke, p. 183), Zamakhsharî (Mufaşşal, p. 156), and Ibn 'Abdi Rabbihi ('Iqd, i, 294). The following is the oldest version, that of the Kāmil: 'One whom I do not count among our colleagues tells in the name of 'Aşma'î, who had it from Shu'ba, who had it from Qatada, that Mu'awiya asked one day "who are those that speak the most correct Arabic?" One of his courtiers rose and said: "The tribe which keeps away from the furātiyya of Iraq, keeps to the right of the kashkasha of Tamim and to the left of the kaskasa of Bakr, which does not have the ghamghama of Quda'a, nor the tumtumāniyya of Himyar". Mu'āwiya then asked "and who are they?", to which the courtier replied: "my own tribe, O Commander of the Faithful". Asked "of which tribe are you then?", he replied "I am of Jarm". 'Aşma'ī adds: Jarm are among those who speak the most correct Arabic.' So far the version in the Kāmil. The other versions add other faults: the 'an' ana of Tamim, the taltala of Bahra', the rutta and lakhlakhāniyya of Iraq, the fashfasha of Taghlib, the tadajjus of Qais, and the sajrafiyya of Dabba. Some of the peculiarities are assigned to different tribes in different versions.

m The version of the Kāmil contains at least one deviation from what must have been the original form of the story: the attribution of the ghamghama to Quḍā'a. In the Tāj (ix, 6) it is attributed to Quraish (cf. also § 10 o). The versions of our story as given in Durra and 'Iqd go farther. They let the courtier reply 'your tribe, O Commander of the Faithful, speaks the best Arabic'. It is thus made to conform with the dogma which in its most pointed form is reported by Père Anastase (Mashriq, vi, 529): lam yakun li-quraishin 'aibun fī l-kalāmi, 'Quraish bad no flaw in their speech'.

n The steps which led to this reasoning are fairly clear. The Prophet was 'ummi, 'illiterate', a which to the Arab of later centuries was identical with ignorance of literary Arabic. It was, therefore, out of the question that he should have learnt it. Moreover, it would have been unworthy of the Prophet to have spoken any but the best Arabie, or to have taken over the language of anyone else, least of all the poets whom he despised. The theory

fitted in well with the tendency to ascribe to Mecca a leading position in the religious and literary life of Arabia before Islam.

- o Khālid h. Salama states it as a commonplace that the Koran is in the dialect of the Quraish (Ṭabarī, Tafsīr, i, 23). The same 'Abū Bakr al-Wāsiṭī whom we have seen above (§ e) argue the mixed character of the Koranic vocabulary, is quoted as saying that there are only three words in the Koran that do not belong to the Quraish dialect, otherwise the holy hook is composed entirely in that dialect 'because it is smooth and clear, while the speech of the Arabs (bedouins) is uncouth and full of unusual words' (Suyūṭī, 'Itqān, p. 314). 'Ahū l-Laith as-Samarqandī applies the dialect criterion to textual criticism: 'When two different readings mean the same, Mohammed can have uttered only one of them, hut he permitted every tribe to read according to their own usage. If someone should ask "since you say he used only one variant, which one was it?"—we shall reply "the one that agrees with the dialect of Quraish" ('Itqān, p. 193).
- p Qalqashandi (Şubḥ al-'a'shā, ii, 233) states this view in such a way as to bring out its ideological significance: 'The Prophet spoke hoth in public and in private the language of Quraish and of the settled population of Hijaz'. The first caliphs are shown to us watching with jealous eyes lest the sacred text should lose its dialect character. Muḥammad al-'Amīr (on Mughnī, i, 111) tells us that one day Ibn Mascud was reciting the Koran in the presence of the caliph 'Omar, and pronounced 'atta for hatta (cf. § 8 o), according to his own Hudhail dialect. The caliph rebuked him sharply: 'the Koran was not revealed in the Hudhail dialect, therefore teach the people according to the dialect of Quraish'. Such anecdotes are numerous. According to Ibn at-Tin (quoted by Suyūțī, 'Itqăn, p. 140), 'Othman's reason for instituting bis well-known revision of the sacred text was none other than that everyone recited it according to his own dialect; 'he therefore had one copy made, arranged by Suras, in which the Quraish variants were selected as against the other dialects. To justify this step he pointed out that the Book had been revealed in that dialect.' According to Abulfeda (Annales, i, 264) 'Othman gave the following instructions: 'If ye differ concerning any words in the Koran, write down the version which agrees with the dialect of Quraish, for in it the Koran was revealed'.
- q The reason why the dialect of Quraisb became the literary language of all Arabs is most clearly expressed in a statement that seems to emanate from Ibn Fāris (d. 395/1005; Ṣāḥibī, p. 23) and is often quoted (here in the form it has in Nīsābūrī, Gbarā'ib al-Qur'ān, i, 20): 'The Quraish had of all Arabs the best judgment in matters of accuracy in the choice of words; their speech flowed most easily, they had the finest feeling for the language and the greatest facility in expressing their thoughts. From their mouths the classical language was recorded and their usage is the one to be followed.

Their idiom was adopted among the Arabs by the Qais, Tamiin, and 'Asad. These, therefore, are the principal sources of information. Their usage is to be relied upon in questions of lexicography, syntax, and accidence. Besides these, but to a lesser degree, the Hudhail, part of Kinana, and part of Tayyi' may be considered. No persons belonging to any other tribe must be used as sources of information. Under no circumstances is a settled Arab ever accepted as an authority on matters of correct speech.' There is no need here to discuss the inner contradictions of this view. Other writers describe how this linguistic superiority of the Meccans arose from their frequent contacts with speakers of other dialects during the pilgrimages and the fairs of 'Ukāz (summarized in Sulaimān Bustānī, 'Iliyādhat Homeros mu'arraba, p. 109). This was the view generally held in the later middle ages and by modern Arabs. Its consistent application drove Taha Husain in his 'Adab al-iāhilī to deny the existence of any pre-Islamic poetry by other than Hijazi poets. When Vollers developed at the Oriental Congress in 1905 a theory which contradicted this dogma, he was attacked by Moslem scholars as if he had decried the basic tenets of Islam (cf. Volkssprache, p. 3). Yet, as we have seen, quite different opinions were held by important Moslem authorities.

r There seems to have been some opposition to this glorification of the Quraish dialect. As usual, it was clothed in the form of a hadith in which the Prophet says: 'anā 'afṣaḥu l- 'arabi baida 'annī min Quraishin wa-nasha' tu fī Banī Sa'din (Ibn Hishām, Mughnī, i, 105; Lisān, iv, 68). This, to my mind, bears only one translation: 'I would have been the most eloquent of all Arabs, but for the fact that I was born in Quraish and grew up among the Banū Sa'd' or perhaps: 'I am the most eloquent of the Arabs, though I was...'. Ibn Hishām ascribes to baida here the otherwise non-existing meaning 'because'. 10

s All these views were, however, held purely theoretically, and did not exert any influence on the day-to-day approach of scholars to linguistic questions. We never hear of any scholar who went to study Arabic in any of its supposed homes or tried to emend poetry according to Koranic usage. Even the respect for bedouin usage must be taken with a grain of salt. The 'native assistants' of the schools were most probably professional ruwāt. It was the rāwī who transmitted literary Arabic usage from generation to generation. 11 Early philologists, such as Yūnus and Kbalīl, clearly drew their information from the ruwāt, if they did not, as is quite likely, start their own career as ruwāt. The great achievement of the first generations of philologists was to combine and systematize the different local or tribal rāwī traditions and to harmonize them with the rather different type of literary Arabic used in the Koran and in the Imperial chancelleries.

t Many of the statements discussed in the chapters dealing with the Hijazi dialect betray that the philologists, in spite of their theoretical

identification of Quraish dialect and literary Arabie, were quite aware of the distinction between the two. They had no hesitation in ascribing exceptional usages in the Koran to the Prophet's dialect. If anything, they had a tendency to go too far with this convenient method.

u Ibn 'Abī Dāwūd (Jeffery, Materials, Arabie text, p. 32 seq.) transmits traditions according to which 'Othman admitted that the Koran still contained some dialect traits 'but the Arabs would soon put them right'. May we perhaps see in the 'Arabs' the Najdi bedouins, the guardians of the poetical idiom, and in the dialect traits remnants of Hijazi provincialisms? In fact 'the Arabs' did put the Koran right, at least to some extent, through the influence of grammarians on the selection of reading variants.

NOTES

- ² In the same note Fischer announced the impending publication of a lecture held some years earlier on the subject of dialects and Classical Arabic. He seems not to have carried out his intention. No article of this nature is listed in Plessner's bibliography of Fischer's writings (Islamica, ii, 618-44).
- ⁶ 'Anīs (Lahajāt, p. 33) lists the tribes whose language was not admitted as evidence because of their contacts with the outside world: Quḍā'a, Taghlib, Namīr, Bakr. Anīs does not give his source. These tribes are indeed rarely mentioned in connection with dislect material, but the same applies to several large tribes in inner Arabia.
- Bow even the best-trained scholars can err in this respect, is illustrated by the amusing case of Comte de Landberg, who heard (or 'remembered' some years later he had heard) a girl of the Fshm tribe address him in the purest literary Arabic 'mit allen Vokalfinessen' (Critics Arabica, p. 56; cf. Snouck Hurgronje, Verapreide Geschriften, v, 129).
- 4 It is of some significance that the dialects enumerated are all West-Arabian. In the material of the Risāls, West-Arabian dialecta predominate.
 - The same author held also the opposite view (cf. § o below).
- ° The reference to the Härith dialect is to be deleted (it refers to the story of 'Abū Qilāba mentioned in $\S c$ above).
- ⁷ Ibn Ya'ish (p. 1246) implies that the Jarm mentioned here are not the Quda'a tribe, but a section of Tsyyi'. The existence of s Jarm within Tayyi', by the way, opens some vistas to the origins of that tribe.
- * This is how the word was understood from early times. On its true meaning in the Koran, cf. Blachere, Introduction, p. 8.
- * The words are: yunghidūna (xvii, 53/51), muqit (iv, 87/85), and sharrid (viii, 59/58).
- 10 One can also take wa-nasha'tu in the sense of fa-qad nasha'tu: 'I speak the best Arsbic, for though I was born in Quraish, yet I grew up among the Sa'd'. The view that Muhammad was sent to the Ss'd in order to improve his Arabic is expressed by Ibn Hishām. Perhaps our story is drawn from the hadith preserved in the Nihāya of Ibn Athir (ed. Cairo, i, 3) where Muhammad ascribes his ability to converse with 'the Arabs' to his stay with the Banû Sa'd. It is worth while noting that this hadith implies that auch speech was almost unintelligible to the townsmen of Mecca.
- ¹¹ Substantially the same view, that the poets preserved the knowledge of an older form of the language, is put forward by Landberg (Proverbea et Dictons, i, xxvii).

Chapter 4

YEMEN

a The Yemen is the most clearly defined of all regions of Arabia. Its inhabitants differ from those of the rest of the peninsula in their physical type as well as in their social structure. In Early Islamic times two further factors contributed to make them feel different. The memory of the great South-Arabian culture was still vivid, its monuments were still standing: and some part of the population still spoke a language markedly different from Arabic, called Himyaritic, which was popularly believed to be identical with the language of the inscriptions of the ancient kings. A great national pride inspired the Yemenite antiquarians and philologists of the third and fourth centuries to record the peculiar words and expressions current among their compatriots. We are thus, at least from the lexicographical aspect, better informed about the Yemenite than about any other dialect. Morcover, the population of the country appears to have changed little since the seventh century, so that we can often use features of present-day Yemenite colloquials to clucidate the scanty data of the grammarians. Though far from complete, the information contained in the works of the Comte de Landberg, of Goitein, Mittwoch, and Rossi, gives us a clearer picture of the speech of the Yemen than we possess of any other peninsular colloquial.

b The continuity of linguistic development and the attention the dialect received from the philologists have also certain disadvantages for us. On the whole it is not possible for us to decide whether any particular piece of information refers to the time of the writer who gives it or to an earlier time. Our sources tend to treat the language of the province as a unit, and often quote as lughat 'ahl al-Yaman features that are elsewhere specified as peculiar to Northern Yemenite dialects or to Himyaritic. It is hardly more helpful if some word or form is referred to 'some Yemenites' (ba'd 'ahl al-Yaman). We can for the moment do nothing but treat all data for which we possess no more detailed localization as referring to the Yemenite dialect as a whole. In fact there is nothing to prove that there ever were any features which marked all dialects in the province as against those outside, or in other words, that there ever existed a Yemenite dialect. The little we know of the Northern Yemenite dialects rather tends to suggest that there was a continuous chain of dialects from south to north, without any clear dividing line between Yemen and Hijaz. It is, therefore, quite likely that some of the material treated in this chapter belongs really into the three next chapters, Himyar, 'Azd, and Northern Yemen.

c With the exception of features expressly described as Himyaritic, our data for the Yemen betray little survival of South-Arabian forms. This seems

to indicate that the pre-Arab substrate was very slight in the Arabic-speaking districts. However, there is generally a paucity of grammatical, as compared with lexicographical data. The Yemenite words we find in the dictionaries are mostly of a very specialized and local character and hardly touch the sphere of the basic vocabulary. All this points to the conclusion that the philologists record for us the 'literary' Arabic as used by Yemenites, not their local dialects. It is not impossible that these latter ones contained more South-Arabian features.

d Though vocabulary does not fall within the purview of this volume, we may mention here a small number of words common to the Yemenite or 'Himyaritic' dialect and to North-West-Semitic, because they may throw light on the position of the dialect within the Semitic family. Some of these words may be loans from South-Arabian, especially those referring to activities of settled life. Others, however, may be common West-Arabian words which fell out of use in the speech of the Hijaz. Perhaps, if we knew more of the Tayyi' dialect, we might find some of these words there. The Hebrew aspect of these equations has been treated more fully in the Hebrew Melilah, ii, 252-55 (Manchester, 1946).

1. 'aim 'devil' (shaiṭān) (cf. Tabarī, Tārīkh, i, 1040), Hebrew 'ēmīm 'prehistoric giants' (Deut., ii, 10), 'āyōm 'gigantic', 'ēmāh 'terror', Babylonian ūmu 'dragon' (for the last cf. Hommel, Ethnologie, p. 665, note 4). In

South-Arabian as n. pr., CIH 434, line 10.

2. ba'l 'lord' (Baidāwī, ii, 177; 'Abū 'Ubaid, Risāla, p. 155), cf. Hebrew ba'al and cognates, also common in S.-Ar. and in Mehri (cf. Mordtmann, Himyar., Inschr., p. 61), as well as in Ethiopic. In this sense the word may have been borrowed by Muhammad from South-Arabian (Koran, xxxvii, 125, Meccan, second period), but in the more frequent meaning of 'husband' (e.g., xi, 72) it occurs also in poetry (e.g., the 'Uqailī Majnūn Lailā, Nöldeke, Delectus, p. 6), and is perhaps a direct loan from North-Semitic.

3. tilm 'furrow' (Nashwan, Extr., p. 14), Hebrew telem, Eth. telm, as against Arabic talam (Targumic Aramaic tlāmā).

4. jafn 'vine' ('Azharī, quoted Tāj, ix, 162), Hebrew gephen and cognates,

also S.-Ar.

5. jaihal, mijhal 'stick for raking coals' (Ibn Duraid, Jamhara, iii, 357; Lisān, xiü, 138), perhaps connected with Hebrew gaheleth 'live coal', a word without satisfactory etymology.

6. haşab 'firewood' (Farra' in Lisan, i, 310, to explain Koran, xxi, 98),

Hebrew hāṣabh 'coop wood' (Is., x, 15).

7. khabālīhi 'woc for him', said when mentioning a fault of one who died recently (Jamhara, i, 239), Aramaic (especially Western) hébhal 'woe' on tombstones, etc.

8. khashaf 'thick clay' (Jambara, ii, 223), Biblical Aramaic hāsaph; in other languages with sād. Particularly interesting, because the South-Som. forms, Eth. sāheb 'clay', and perhaps also S.-Ar. shf 'throw up carthworks', Arabic sahfa 'dish', show transposition in addition to the s, and h for kh.

9. khaşîn 'a small axe' (Jamhara, ii, 227), Syriac hĕşînā, Ass. khaşinnu.² 10. khalāq 'luck' (six times in Koran, only in Medincan suras) is said by 'Abū 'Ubaid (Risāla, p. 143) to mean 'portion' in the Kināna dialect; cf. Bibl. Aram. hālaq, Hebrew hēleq. As the phrase in Koran iii, 71/7 is identical with the Mishnaic Hebrew expression 'ĕn lāhem hēleq bā-'olām hab-bā', the

word, as used in the Koran, may be a loan from Jewish Aramaic.

11. rakhima 'have tender feelings towards' (Jamhara, ii, 214), Hebrew rahēm (Pi'el) often used of parental love; S.-Ar. rkhm in the epithet of a god (CIH 40, line 5) also in Thamudic n. pr. mrkhmt. Perhaps the S.-Ar. rhmn and other forms of the root, which occur only in late inscriptions, are borrowed there from North-Semitic.

12. raqada 'to romp' (Jamhara, ii, 253), Hebrew raqadh and cognates.

- 13. rakana 'to incline' (Koran, xvii, 76/74) is said by 'Abū 'Ubaid (Risāla, p. 148) to be Kināna dialect; Mishnaic Hebrew harkēn 'incline one's head'.
- 14. shaḥaba 'to hoe the ground' (Jamhara, i, 223; Lisān, i, 467) may be connected with Hebrew sĕḥābhōth 'rags' (Jer., xxxviii, 11) and sāḥabh 'tear to pieces' (ibid., xv, 3). We would thus have a root śḥb 'to tear', different from shb 'to drag' (Arabic, Hebrew, Ethiopic). Then the two Hebrew words just quoted are written with Sāmekh by error (on similar cases in the Bible, cf. Gesenius, Grammar, § 6 k).

15. tashabbaşa 'to be intertwined' (Jamhara, i, 291), Hebrew mishbēşōth 'intertwined gold-thread'.

- 16. 'ashaṭṭa (Koran, xxxviii, 22) and its verbal noun shaṭaṭ, normally translated as 'to transgress', is derived by 'Abū 'Ubaid (Risāla, p. 151) from shaṭṭa 'to lie' in the Khatb'am dialect. Cf. perhaps Hebrew śāṭē khāzābh (Ps., xl, 5) and śēṭām (Hos., v, 2), usually translated as 'turning aside', which would thus mean 'liars'.
- 17. sauqam 'sycamore' (Jamhara, iii, 42), Chr. Pal. Aram. shōqmā, Hebrew plur. shiqmīm.
- 18. şu'iya 'to be soiled', of clothes (Jamhara, i, 182), Hebrew beghadhim sō'im 'filtby garments' (Zech., iii, 3). In Arabic, with transposition, waṣi'a.
 - 19. taffāl 'dry mud' (Jamhara, iii, 110), Jew. Aram. těphel 'to smear'.
- 20. zi'r 'pillar' (Jamhara, ii, 379), Mishn. Hebrew zīr 'door-hinge', S.-Ar. tzwr (RES. 2965, line 1, ctc.).
- 21. ya'zubu 'is hidden (?)' (Koran, x, 62/61) is said by 'Abū 'Ubaid (Ris., p. 147) to mean 'to leave' in the Kināna dialect. Cf. Hebrew 'āzabh 'to leave', and cognates. (For Arabic cf. also Yahuda, ZAss., xvi, 250-8).

22. 'azīqa 'plain' (Jamhara, iii, 6) is perhaps connected with the name of the town 'dzēqāh on the edge of the Judæan plain. Perhaps also 'azzēq (Is., v, 2) means 'to level'.

23. gafakha 'to strike in the neck' (Jamhara, ii, 236), Mishn. Hebrew

qāphah 'to strike on the head'.

24. kurkūr 'deep river gorge' (Jamhara, i, 147), cf. perhaps Hebrew kikkar ha-yardēn, usually explained as '(round) plain of the Jordan'.

25. māriyyun 'lord' in Himyaritic (Nashwān, Extr., p. 100), Bibl. Aram. mārē', S.-Ar. mr'. Arabic (i)mru' 'man', etc., differs both in form and meaning.³

26. tanassama 'to breathe' (Jamhara, iii, 52), Hebrew nāsham and eog-

nates. In Arabic 'to blow'.

27. wathaba 'to sit' in Himyaritic (Nashwān, Extr., p. 113; Jamhara, i, 205, etc., and in many other places), Hebrew yāshabh and cognates. In Arabic 'to jump'.

28. wahar 'blaze of the sun' (Jamhara, ii, 422), Mandaie yehar 'to shine',

Hebrew yāhīr 'proud' (cf. Nöldeke, Neue Beiträge, p. 189).

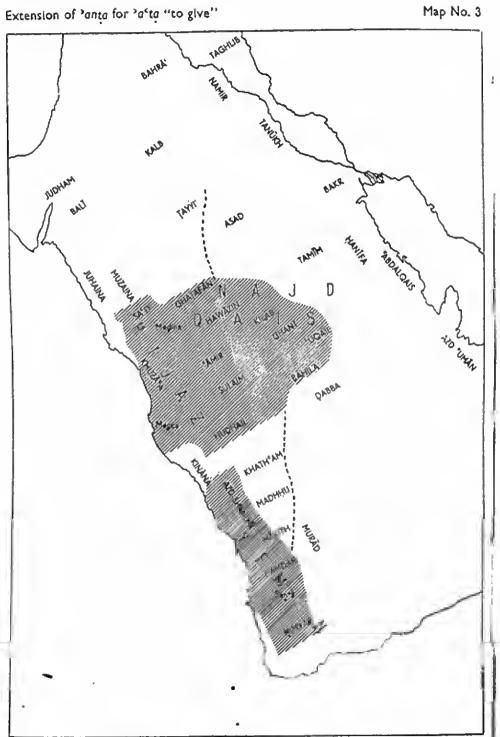

Although some agreements with North-Semitic against Classical Arabic can be produced for nearly every dialect, this list is too long to be taken as mere coincidence. As is well known, Ethiopic, too, agrees in some points of vocabulary with Hebrew against all other Semitic languages. As in so many other points, Western South-Semitic proves in its vocabulary closer to North-West Semitic than does the eastern branch of South-Semitic.

e For the vowel sounds of the Yemenite dialects we possess only some scanty and ambiguous indirect evidence. Imala of long a seems to be rare in present-day Yemenite colloquials; according to Rossi, (RSO, xvii, 469) it does not occur south of San'a'. Rossi (ibid., 234) makes no mention of ā becoming o anywhere in the Yemen. Such a change is bowever said to occur sporadically in the Hadramaut (Mordtmann, Südar. Alt., p. 22, note 1; Landberg, Arabica, v, 189, 206), in 'Azzān (Landberg, Dathina, p. 295), Shahha (Jayakar, BRASB, 1902, p. 263), Oman (Reinhardt, p. 95, 115), and Zafār (Rhodokanakis, Dhofar, ii. 91). In the last-named region Rhodokanakis ascribes it, with good reason, to Shahari influence. We have no trace of ā being pronounced as ō in either Greek or Arabic transcriptions of ancient S.-Ar. names, nor (in spite of Dillmann, Grammar, p. 147) does such a change occur in the Ethiopic family of languages. The modern South-Arabian languages, however, have this change quite regularly (Brockelmann, GVG, i, 142). As ā regularly became ō in Canaanite, Western Aramaie, and the Hijaz dialect (see § 10 s and map No. 12), we might feel tempted to assume that it penetrated into South-Arabian from West-Arabian. The link would have to be the old Yemenite dialect, and it is therefore of some interest to know how ā was sounded there.

f A great many names of the first Islamic centuries, and later still in the West, were formed with a suffix $-\bar{u}n$. Kampffmeyer (ZDMG, liv, 634-40) adduces arguments to show that it was a peculiarly Yemenite mode of name-formation. Landberg (Dathina, p. 293 ff) suggests that $-\bar{u}n$ was none hut the South-Arabian definite article $-\bar{a}n$, which was pronounced $-\bar{o}n$ hy the Yemenite bearers of these names. In fact the form $-\bar{a}n$ for the South-Arabian article -n is purely hypothetical. Kampffmeyer (loc. cit., p. 649) thinks it was $-\bar{u}n$ in the nominative, $-\bar{i}n$ in the genitive, and $-\bar{a}n$ in the accusative, and to prove this he points to the existence of names with the endings $-\bar{i}n$ and $-\bar{a}n$ besides those with $-\bar{u}n$. As Himyaritic had no trace of the old suffixed article it is rather improbable that these suffixes have anything to do with it, and they should rather he compared with the many Hebrew names ending in $-\bar{o}n$, some of which may be caritative (diminutive), with the Syriae diminutive suffixes $-\bar{o}n$ and $-\bar{i}n$, and the hypocoristic $-\bar{o}$ used with names in modern Syrian colloquial ("Abdō for "Abdallāh, etc.).

g The absence of any express statement to the effect that long a had an o-like sound in Yemen is not a strong argument against assuming that it was so. The Arab philologists were euriously ineffective in phonetic matters. We shall see, when we come to deal with the same problem in the Hijaz, that apart from one isolated general statement our main indication consists in a special case where the pronunciation had affected the spelling, namely the words of the type hayātun, zakātun, which were spelled in Koran MSS. hywt and zhwt. Ibn Jinnī (Sirr aş-şinā'a, quoted Bravmann, Materialien, p. 35) says that hayātun and zakātun were pronounced ji in Yemen. We know definitely that in old tajwid these words, thus spelled, were pronounced hay otun, zakotun, a fact which cannot have been unknown to Ibn Jinni, and we therefore suspect that he means the same sound in his statement about Yemen. Braymann, however, reads hayawatun, zakawatun. Not having access to the Sirr, I cannot judge whether the vowels are found in MSS. If they are, this complicates the situation even more, as zakātun is a foreign word, Aramaie zak(k)otha, and hayatun is strongly suspect of being one (ef. § 10 q). On the other hand, hayawatu and zakawatu are thought to be the proto-Semitie forms of nouns of this type, and thus the question hoils down to two separate prohlems: (a) was proto-Semitie -awa- preserved in Yemen or reduced to either \bar{a} (as in Classical Arabie) or \bar{o} ; (h) were those foreign words pronounced as in their original language, or were they (if we accept the first alternative in question (a)) adapted to an existing native pattern?

h Hamdānī (Jazīra, p. 135) states that the Banū Ḥarh, one of the bedouin tribes of southern Yemen, 'had 'imāla in all their speech'. Does Hamdānī mean to say that they, contrary to other inhabitants of the province, pronounced long a as æ or the like? This would be interesting in that it would

imply that otherwise 'imāla was unknown in Yemen, and would thus lend some indirect support to the theory that \bar{a} might have tended towards \bar{o} . But Hamdānī may have meant something else by 'imāla.

i The sound corresponding to Classical Arabic jim in the Yemenite dialect is described as 'between k and j' (Jamhara, i, 5; Ibn Ya'isb, p. 1463). Ibn Fāris (Şāḥibī, p. 25) says it was between q, k, and j. Muqaddasī ('Aḥsan ar-taqāsīm, p. 96, for Aden) describes the sound as kāf. Qārī (Al-manāh al-fikriyya, p. 25) describes a aound mixed of k and j, in which the tongue 'raises itself at the place where k is articulated', which arises mostly in the neighbourhood of a harf mahmus. Bravmann, (Materialien, p. 49) argues from this that the description of the Yemenite sound cannot apply to a g, because a harf mahmus is not voiced, and therefore the sound described by Qari must be a voiceless one. It is improbable, however, that the sound described by Qarī is in any way connected with the Yemenite one. The Yemenite sound must have been voiced, in any case. The description of it as 'between' j (as in English) and k probably means that it was articulated at a place between those two, that is that it was a pure palatal, J. Such a sound is still used in southern Yemen (Rossi, San'a, p. 2; RSO, xvii, 236). Rossi describes it as a squeezed (schiacciato) g, almost gy; Maltzan (ZDMG, xxvii, 244) as 'softer than g'. Cantineau (Parlers, p. 25 f) reports the same sound from the north-Arabian hedouin colloquials of the Ruwala, 'Aneze, and Shammar. In all those colloquials J (which is a rather unstable sound) alternates freely with g (as in English go). Some Yemenite dialects have only g (Landberg, Dathina, p. xiii), so has the colloquial of Oman (Reinhardt, p. 4) and that of the uniquitous Sleb (Cantineau, Parlers, p. 26). This is, of course, the sound corresponding to jim in Modern South-Arabian and Ethiopic languages. Perhaps the statement of Muqaddasī (in which we should possibly read 4, not 4) refers to dialects of that type. The absence of any express comparison with Persian gaf is rather strange.

k No mention is made in our sources of the weakening of 'ain into 'alif, so common in present-day Yemenite colloquials, and in ancient times in the Tayyi' dialect (cf. § 14 q). The same change occurs also in South-Arabian inscriptions from the Hadramaut (cf. Philby, JRAS, 1945, p. 128). As we shall see, the evidence for the Hijaz is also of a rather unobtrusive character, so that the silence of the philologists on the Yemen does not allow any conclusions to be drawn.

I We might draw some conclusions on the sound of 'ain in the west and south from the statement that Yemen, 'Azd, Hudhail, Medina, Sa'd ibn Bakr, and Qais said 'antā for 'a'tā 'to give' (Nashwān, Extr., p. 104; Zamakhsharī, Fā'iq, p. 6; Lisān, xx, 206, etc.; map No. 3). At first sight it appears as if 'ain had somebow turned into n (or rather emphatic n) under the influence of t. This presupposes that 'ain normally had a nasal element

in its articulation, which in certain contexts (e.g., immediately before some consonants) might remain the only mark of this phoneme. Such a nasal twang is quite audible with some Palestinian Arabs. In the Wadai colloquial in Central Africa nasalization of vowels is the only remnant of etymological 'ain (Kampffmeyer, MSOS, ii, 2, p. 200). In Zafar (southern Yemen) a vowel is nasalized if it comes between 'ain and n or m, though Rhodokanakis (Dhofar, ii, 89) did not hear any nasal timbre in the 'ain itself. Oriental Jews use a strongly nasalized 'ain in Hebrew. In Western European Sephardic, the pharyngal element has been dropped, and the consonant is sounded like ng in king (Luzzatto, Gramm. ebraica, Padova 1853, p. 99; but cf. also Artom, Leshonenu, xv, 56). Bravmann (Materialien, p. 42), who thinks that the origin of 'anta is purely phonetical, maintains that the nasal timbre was an inherent feature of the consonant from proto-Semitic times. However, further consideration suggests non-phonetic explanation of 'anță. To-day the form is used in Baghdad, Southern Iraq, the colloquial of Nablus in Palestine (Bauer, Palest. Arabisch, p. 7), and among the 'Aneze in the Syrian desert (Wetzstein, ZDMG, xxii, 74, line 2, and 80, line 4, cf. ibid., p. 114-but not reported by Cantineau). In Yemen itself only forms with 'ain are recorded: Central Yemen 'o'ti 'give' (Goitein, Jemenica, No. 711), in the south 'ata (Rhodokanakis, Dhofar, ii, 40), in Oman 'ata 'to bestow' (Reinhardt, p. 244; 'to give' is ta). We must remember that only in Arabic the root 'ty is commonly used with the meaning 'to give'. Brockelmann (GVG, ii, 309, Note 1) observes that the peculiar construction of 'a'ta' with double accusative is due to its being a causative of 'ata 'to reach for'. The latter verb occasionally is constructed with 'ila (Suyūţī, Sharh shawāhid al-Mughnī, p. 41). It then corresponds to Hebrew nätāh yādhō 'el 'stretch one's hand to'='to take', which was contracted into Bibl. Heb. nätal 'to lift', Aramaic nětel. The whole situation in Arabic suggests that here 'antă, the causative of nata, was the older word, which was in the East replaced by a new formation from 'ata, the synonym of nata, perhaps after the meaning of nata had become too specialized. The connection of 'a'ta and Hebrew natah was first suggested by K. Vollers (ZDMG, xlix, 505). The new form took some time to advance into the Western area. The old 'anta still occurs in some hadith (cf. § 11 c) and in an utterance by a man of Ghani, a dialect which in other respects belongs to the Eastern group (Bakrī, Mu'jam, p. 540). Fell (ZDMG, liv, 235) argues that the root nty meant 'to give rain', which may be a further reflection of the old usage. No doubt the similarity in sound made it easier to replace 'anta by 'a'ta. A similar reason may be found for the substitution of the root mtw 'to come' for nty both in Aramaic and in Ethiopic. In Daniel, vii. 22 the Septuagint translates měṭā by ἐδόθη; in the Elephantine papyrus Cowley No. 28, line 3, měta ak means 'was given to thee'. In Ethiopic mat(t)awa means 'to offer', in Amharic amatta 'to give'.

Possibly mtw means 'to give presents' in CIH, 397, line 6-7. We might see an occurrence of the same meaning in the Arabic 'amtä z-zahra 'give someone an animal to ride', from which the otherwise inexplicable matiyya 'mount' is derived, originally 'mount given (by a lord to his follower)'. Thus, a satisfactory etymological explanation for the relationship between 'antä and 'a'tä can be given, and we can draw no inference as to the sound of 'ain.

m In two roots we find alternation between dād and shin: 'illaud 'jackal' (Jamhara, iii, 93) appears also as 'illaush (ibid., iii, 61). Nashwān (Extr., p. 107) gives both nāda and nāsha as 'to carry'. All these forms are given as Yemenite. In early Arabic both dād and shin were lateral sounds (Bravmann, Materialien, p. 53); dād is still articulated laterally by some Koran readers' (Gairdner, Phonetics, p. 20, Note 4). Both are lateral sounds in modern South-Arabian languages (Jahn, Mehrisprache, p. 4-5; Leslau, Lexique Soqotri, p. 31), and dād in parts of Yemen (Landberg, Hadr., p. 637). The alternation would thus have been quite easy. Of course we must not conclude from this that the contemporaries of Nashwān and Ibn Duraid still sounded the two consonants as laterals: the alternations might have been old-inherited or heen due to dialect-mixture.8

n The Yemen is not included among the dialects in which hamza had disappeared (cf. § 11 m). Yet the lexicographers record for the Yemen instances of the aecond and third form of verbs primæ hamzatæ with w instead of hamza, which can only be explained as wrong rederivations from the imperfect: ywātī>yuwātī, thence wātaitu 'I obeyed' for 'ātaitu (Tāj, x, 10) similarly wākhadha 'to reproach' for 'ākhadha (Miṣbaḥ, p. 14), wākhā 'to fraternize' for 'ākhā (Nashwān, Extr., p. 114), wāsā 'to be generous' for 'āsā. The aituation is analogous in present-day Yemen. On the one hand hamza is clearly pronounced (Goitein, Jemenica, p. xii; Rossi, RSO, xvii, 235), on the other hand its omission and replacement by glide-sounds like w and y is very common (Goitein, ibid.). Rossi even cites forms like twakhkhar = ta'akhkhara, itfawwal=tafa''ala, in which the original hamza never came to stand between a and u, so that the w can be due only to the analogy of other forms where it arose through phonetic causes.

o Ibn Duraid cites two cases in which Yemenite had $fu'\bar{a}l$ or $fu''\bar{a}l$ for the adjective pattern $fa'\bar{a}l$: $kubb\bar{a}r$ 'old' for $kab\bar{i}r$ (Jamhara, i, 274; in Ishtiqāq, p. 254: $kub\bar{a}r$) and $kuth\bar{a}r$ 'much' for $kath\bar{i}r$ (Isbitqāq, p. 40). Růžička (ZS, x, 29) gives a list of cases where $fu'\bar{a}l$ alternates with $fa'\bar{i}l$ in Classical Arabic. I have checked these with the lexica, but found no reference to the Yemenite dialect. On the other hand nearly all the place names in that list which can be located will be found to belong to the West-Arabian area: Sulaim, Hijaz, Tayyi', Oman, only a few in the Yemen. The form $kub\bar{a}r'\bar{i}s$ still alive in the Meccan colloquial $kub\bar{a}riyye$ 'upper class' (Snouck Hurgronje, Mekkanische Sprichwörter, p. 5). The use of $fu'\bar{a}l$ and $fu'\bar{a}l$ in

West-Arabian is closely connected with that of the feminine $fa^*\bar{a}li$ (on which cf. § 12 k), to which it forms a masculine. E.g., in the Mu'allaqa of the Westerner ('Āmirite) Labīd, line 52, the masculine dog-name sukhām appears by the side of the fem. kasābi (skhym and skhmn are South-Arabian names, too). In Bukhārī, Shurūt, § 15, one Meccan addresses another 'ai ghudaru 'you traitor', i.e., fu^*al is typical for vocative use, like $fa^*\bar{a}li$. It may have kept some of its vocative force in (?Western) names like 'Umaru, which to the Arab's mind were $ma^*d\bar{u}l$, not in their normal pattern (cf. Wright, i, 245 C).

p In the well-known anecdote about the Arab who misunderstood the Himyaritic wathaba (Ibn Fāris, Ṣāhibī, p. 22; Lisān, ii, 291, etc.) the king of Himyar is made to say laisa 'indanā 'arabiyyat' there is no Arabic among us'. It is further explained that in his language the feminine ending was not dropped in pause. This is not necessarily a reminiscence of South-Arabian, but an old feature of West-Arabian, also preserved in the Tayyi' dialect in the far north. It is not possible to say whether it existed only in Himyaritic

or also in other Yemenite dialects.

q Muqaddasī (c. 375/985) heard in Aden rijlainuh 'his two feet', yadainuh 'his two hands' for the common colloquial rijlaih, etc. ('Aḥsan at-taqāsīm, p. 96). It may be nothing but analogical transfer of the -n- from the absolute form, as is done in several colloquials in the sound masc. plural (Brockelmann, GVG, i, 452). The Aden dialect is described by Muqaddasī as muwallad 'new-fangled', by which he perhaps means that the inhabitants had but recently passed from South-Arabian to Arabic. Similar forms are used occasionally 'by semi-educated people' in Oman, Egypt, and Tlemsen (Brock., GVG, i, 456), and regularly at Baghdad and Mosul (Barth, Pronominalbildung, p. 55), Zanzibar (Practorius, ZDMG, xxxiv, 222), and by the Slūt in southern Syria (Cantincau, Parlers, p. 73). All these are colloquials which betray Yemenite influence in other respects. This should make us beware of lightly dismissing the form as a solecism. But for the remark of the non-philologist Muqaddasī we should know nothing of the connection of the colloquial forms with the Yemen.

r The definite article of the Yemenite dialect was prefixed $(a)m^{-.9}$ The evidence for the existence of this article in old times has been marshalled by Landberg (Dathina, p 281–90) and Kampffmeyer (MSOS, iii, 2 p. 82) and need not be repeated bere. It may be mentioned as a curiosum that in 1866 Kremer (Südarabische Sage, p. 34) could dismiss it as a mere figment of the philologists, based on a dim recollection of the South-Arabian mimation (sic; the mimation was, of course, the indefinite article). This form of the article was in the third century used right up to the northern boundary of Yemen (cf. Hamdānī's list, § 5 c). Nowadays it is still current in many local forms of the Yemenite colloquial, cf. the list of places in Rossi (RSO, xvii,

237), but often side by side with al- (Maltzan, ZDMG, xxvii, 245). In the Central Yemen it seems to have disappeared; no trace of it is found in the material of Goitein (Jemenica) and Mittwoch (Aus dem Jemen). Landberg (Dathina, p. 283) says that it is almost constantly employed in zawāmil poetry, from which one might conclude that it belongs to the archaie language of poetry rather than to that of everyday life. In Zafar the article al- is used, but it is assimilated before b, f, and m (Rhodokanakis, Dhofar, ii, 110), which can only mean that the article was there formerly am- and the old assimilated forms were preserved in spite of the change (for a similar ease cf. the remarks on 'an mukhaffafa, § 13 g). Outside the Yemen proper, am- is still used in Tihāma (Glascr, Geschichte und Geographie Arabiens, ii. 29), by bedouins at Mokha (Landherg, Dathina, p. 286), by the Murra, north-west of the Empty Quarter (Philby, Geogr. Journal, Ixxxi, 10), and by some Central-African bedouins (Kampffmeyer). As we are told that the Tayyi' also used the am- as article, we have here another old West-Arabian feature which had been ousted from the Central West in the eighth century and is now in course of vanishing from the Yemen. We can expect little evidence for the early use of am- from non-Arab sources. Landberg (Dathina, p. 284) sees the article am- in classical transcriptions, such as Ambisama (Ptolemy, § 396) and Mariaba Baramalacum. He analyses the latter as Barr am-Malik, but Blau (ZDMG, xxv, 587), Sprenger (Alte Geographie Arabiens, p. 156), and Nöldeke (ZDMG, xxiii, 289) offer other explanations of the name.

s Since the am- article is common West-Arabian, there is no point in connecting it specifically with the forms of the article used in South-Arabian. It seems, however, to be related to the Lihyanic article, which is normally h- hut before 'alif and 'ain regularly appears as hn- (cf. Winnett, A study of Lihyanic, p. 16-18). There are also some instances of hn- before other initial consonants (Blake, JAOS, Ixii, 117).10 Nashwan (quoted Müller, Südar. Stud., p. 18; Landberg, Dathina, p. 282) says that some Yemenites used an- instead of am-. Examples of this occur in Hamdani's 'Himvaritie inscriptions', where they are all before velar, guttural, or emphatic consonants:11 an-hulm 'the dream' (cf. § 5 h), an-qushm 'fresh vegetables'. an-hind 'India' (Müller, op. cit., p. 22), an-sarīf 'silver', an-tamīm (ibid., p. 17). The sentence which Philby quotes from the Murra has rib' an-khāli. Admittedly the material is not sufficient to state any definite rule; neither can we see any evidence to the contrary in the cases where am-, not an-, appears before those types of consonant, since obviously the copyists knew nothing of the correct usage and 'normalized' spellings, as they no doubt did in the innumerable quotations from the Yemenite dialect with the alarticle. Possibly the n before certain consonants was used only in part of the dialect area, as Nashwan asserts, while others used m throughout. This in

itself, together with the fact that we can hardly explain the appearance of n before gutturals as assimilation, suggests that an- was the older form of the article, which for some reasons unknown to us was replaced by am- (as it was later on by al-), hut for a while at least an- was preserved before consonants in contact with which it had taken on a certain velar or emphatic quality. This an- stands in the same relation to the Lihyanic han- as 'inna to Tayyi' hinna (cf. § 14 s) and Hebrew hinnéh, or Arabic 'in, Hebrew 'im to S.-Ar. hm, Aramaic hēn. It is obviously related to the South-Arabian suffixed article -n, which appears on some inscriptions from the Hadramaut as -hn.

t Ibn Mālik (quoted hy Suyūṭī, Jam', i, 79) states that this am- was not assimilated to dentals and sibilants in the way that Arabie al- is. This is borne out by some independent quotations: a saying, attributed to the Prophet,12 laisa mini m-birri m-siyamu fi m-safar 'it is not part of piety to fast during a journey' (Musnad of Ibn Hanbal, v, 434, from Namir b. Taulab); and a verse, said by Jauhari (Şahāh, ii, 298) to he Himyaritie, but Lisan, xx, 347 and elsewhere ascribed to Bujair b. Ghanama ('Athama) of Tayyi', dhāka khalīlī wa-dhū yu'ātibunī/yarmī warā'ī bim-sahmi wam-salama 'this is my friend and he who reproves me, who shoots in my defence with arrow and slingstone'; further the sentence, probably a parody on the dialect, am-shaikhu m-kubāru daraba ra'sahu bil-'aşwi (sic, read perhaps bin-'aşwi) 'the ancient old man hit his head with a stick' (Jamhara, i, 275). Ibn Hisham (Mughni, i, 47) says that ba'du talabati l- Yaman ('a student from Yemen' or 'a student of things Yemenite'?) quoted to him a sentence, khudhi r-rumha wa-rkubi m-faras 'take the lance and mount the horse', with assimilation of the article before r. He remarks that to his knowledge this was rare in the Yemen. Perhaps it is a sign of the influence of Arabic usage with regard to al-.

u Bustānī (Muḥīţ al-muḥīţ, i, 37) makes the astonishing statement that this am-was used in conjunction with the nunation. The instances he quotes: mani m-qā'imun 'who is the one who stands?' and man fī m-bānin 'who is in the . . . ?', make the impression of having been taken from an ancient source. As Kampffmeyer (ZDMG, liv, 632) remarks, Bustānī was hardly the man to invent such things. It is peculiar that both instances are questions, and in both the word with the nunation comes in pause. Perhaps the original statement was that in the Yemenite dialect words in pause (? in interrogative clauses) received a nunation even if they had the definite article. Such a nunation (nasalization of pausal vowel) is of course a phenomenon of sentence-phonetics, not of morphology. A parallel phenomenon existed in the Eastern dialect of Tamīm (? and Qais, cf. De Goeje in Wright, ii, 369 C), where it was called tanwīn at-tarannum. As we see clearly from the explanations of Ibn Mālik (Tashīl, f. 77 b) and 'Astarābādī (Sharḥ al-Kāfiya, i, 14) this is a nasalization, attached to verbs and nouns, which takes

place in a vowel-ending verse (rawī muṭlaq) when the poetry is recited without tarannum, i.e., without a cantillating protraction of the final vowel. The nasalisation thus affected vowels standing in the pausal position, where one was not accustomed to pronounce any vowels, and is on the same plane as the hā' as-saqṭ. 13 A very similar nasal addition in pause is heard in the 'Ömur colloquial near Palmyra, e.g., byūtakam = buyūtaka 'your bouses', drbbom = darabū 'they struck' (Cantineau, Parlers, p. 18). In that colloquial it seems to be connected with a weakening of etymological -n in pause (ibid., p. 21). It is not impossible that Bustānī's statement refers to a similar state of affairs. I have heard gramophone records of Yemenite Koran recitation in which the nasal timhre in pause is noticeable.

v The form 'aşwu 'stick', for 'aṣā which occurs in the third quotation in § t, is said by Ibn Duraid (Jamhara, i, 275; Ishtiqāq, p. 34) to be customary with 'some Yemenites'. This no doubt goes back to the same original "aṣawu as the Classical form, and resolves the triphthong by contraction, as the Hudhail dialect does in 'inyu for 'inä (originally 'inayu) 'hour of the night' (cf. § 8 u). In the Hudhail dialect 'aṣā was treated differently (§ 8 t). Our 'aṣwu was then a local development of a common Arabic form. We do not know whether other words of the same type were affected.

w Farra' in his Koran commentary (quoted by Beck, Orientalia, xv, 184) says that kidhdhāb for takdhīb, verbal noun of the second form (Koran, lxxviii, 28) is 'a correct Yemenite form', i.e., a form of Yemenite origin considered correct in Classical Arabic. Baidāwi, ad loc., indeed says it is 'generally permissible and widely used by correct speakers'. Nashwān (Extr., p. 90) and Lisan (ii, 201, quoting Kisa'i), however, confirm the Yemenite character of the form. Since it occurs Koran 78, 28 (Meccan, first period), the same form must have been current in Mecca, and perhaps was generally West-Arabian. A special Hijazi variety may be indicated by the statement (in Lisan, loc cit.) that 'Ali pronounced kidhab, while 'Asim and the Medineans said kidhdhāb. It is, in fact, the original Semitic pattern of the infinitive of the second stem (Nöldeke, Neue Beitr., p. 8) which was ousted in Classical Arabic by the verbal noun of the lost stem taf'ala (cf. Hommel, Südar. Chrest., p. 29). The fical infinitive is still current in Central Yemen (Goitein, Jemenica, p. xxiii) and in Dathina (Landberg, Dathina, p. 536).

* A statement by Nashwān's son Muḥammad (quoted by Rossi, RSO, xvii, 249), gives this infinitive as well as two others, all still current in the colloquial: fi'āl for the third stem (without the shortening seen in Classical fi'āl) and tif'āl (? read tifi'āl) for the fifth stem (modern tifi'āl).

y A particle am (or 'am) could be used with the imperfect (Harīrī, Durra, p. 114; Tāj, viü, 194). The instances quoted are: am naḥnu nadribu l-hām 'we chop off heads', and am naḥnu naṭ'amu ṭ-ṭa'ām 'we eat food'. It is

difficult to see what influence, if any, the particle exerted on the meaning of the tense. According to Landberg (Dathina, p. 283, note 3) the particle is still employed in Yemen, though he does not say with what function. In Central Yemen a prefixed a-, with doubling of the following consonant. marks the future tense, the conditional, and imminent action (Goitein, Jemenica, p. xix; Mittwoch, Aus dem Jemen, p. 54). This probably is our am- with assimilation to the initial of the verb. Kampfimeyer (Verbalpartikel, p. 36) sees in this am- the origin of the b- which in so many colloquials imparts to the imperfect the meaning of a present tense. This takes the form m- before the first person plural. It may be of some significance that Hariri has chosen the first plural for both examples. As for the origin of am-, I find it difficult to agree with Hommel (Südar. Chrest., p. 50), who connects it with the Minaean conjunction b- 'while' (for instances see Müller, Epigr. Denkm., p. 46). Our particle seems to be related in the last resort with Arabic 'in. Hebrew 'im 'if'. The conditional particles of Semitic appear to have been at first of a generally emphasizing nature; cf. Hebrew hen 'behold' and Aramaic hen 'if', or the obvious connection between Arabic'in 'if' and 'inna 'behold' with its 'alleviated' form 'in (cf. § 13 g). An instructive parallel is Egyptian ir, which introduces both a casus pendens (= Arabic 'amma') and a conditional clause (Gardiner, Eg. Gram., § 150). It is in no way unusual that such a generally emphasizing particle (and that seems to be the force of am in Hariri's sentences) should have developed various temporal and modal functions. Another possibility is that am is connected with the 'immālā or 'ummālē which the common people used before an imperative ('Abū Hātim as-Sijistānī-d. 250 H.-in Lisān, xx, 358). In a hadith quoted there (not found in the canonical works) the Prophet says 'immālā fa-hsinū 'ilaihi 'well then (?), treat him well' (the comment of the Lisan does not fit the sense, to my mind). In Syria a particle 'ammāl or 'am is used with the imperfect to mark it as a present tense (Driver, Gram., p. 114). There is no satisfactory explanation of it. Could it be an etymologization of *'ammālā? At any rate, 'am seems to be to 'ammālā as 'am to 'ammāl.

z The following account of a spurious Yemenite feature is of interest as an instance of the way in which material was falsified by preconceived notions. Nashwān (Extr., p. 115) cites a verse: ma zāla shaibānu shadīdan habaşuh/ḥattā 'atāhu qirnuhu fa-waqaşuh 'Shaibān ceased not creating violent commotion until his match came and broke his neck'. Nashwān adds that waqaşuh for waqaşahu is 'an incorrect form used by some Yemenites'. It would be quite normal in a modern colloquial where fa'ala has lost its final vowel. The nominative habaşuh for habaşuhu, though permitted in ancient poetry, is also common colloquial. We might thus see here an instance of early Yemenite colloquial verse, were it not for Shinqīṭī (ii, 208) who

ascribes it to a woman of 'Abdalqais, an Eastern tribe, and 'Azhari (Taṣrīḥ, quoted hy Howell, iv, 805) who says it was by a man of Lakhm. The Lakhm, who were resident on the Euphrates since early times, most prohably spoke an Eastern dialect, but they claimed a 'Yemenite' genealogy. Their language was therefore considered hy Nashwān or his source as Yemenite. This feature is most probably one of the Eastern dialects, whence it was inberited by many colloquials. Properly speaking we have here a manifestation of the pausal tendency called naql, which was typical of the Eastern dialects (cf. the material in Birkeland, Pausalformen, p. 55 and 60). The 'Azd dialect in Yemen had a different method of dealing with these forms, cf. § 6 h.

aa The relative particle was dhi, without distinction of number and gender (Nashwan, Extr., p. 39). A quotation slightly earlier than Nashwan (d. 573/1178) is found in Bahā' al-Janadī ('Akhhār al-Qarāmita fī l-Yaman in Tärikh al-Yaman, ed. H. C. Kay, London 1892, p. 147 relating to events at the end of the 3rd/9th cent.), where a woman says dū bud min dhī hakam al-'amir 'there is no help (lā budda) against what the governor decided'. This dhi is still used in the region between Dbamar and Yarim (Rossi, San'a, p. 23; RSO, xviii, 303), and in the western Hadramaut (Barth, Pronominalbildung, p. 159). It is also used in the colloquials of the Maghrib, where Yemenite influence is strong. In other parts of the Yemen it has been displaced by the Classical alladhi, which in old times had penetrated as far as Hudhail (cf. § 8 y). However, the native form influenced alladhi so far that it became invariable for gender and number (Mittwoch, Aus dem Jemen, p. 59; Landherg, Dathina, p. 408). Invariable alladhī occurs also in Hijazi texts, e.g. (Bukhārī, Diyāt, 22) gālū lilladhī wujida fīhim 'they said to them among whom he was found' (cf. also Tahari Glossary, s.v.). The Moslem commentators (e.g., Baidawi) recognize this usage in khudtum kalladhī khādū 'ye hold discourses as those who held discourses' (Koran, ix, 70/69). That passage seems to read better if we take alladhi = ma14 '... like their discourses' (as does Zamakhsbari), but we see that the commentaries found nothing strange in alladhi for the plural. We may be justified in taking this as evidence for the use of dhi as a relative particle also in the Hijaz at a time not too far back. The West-Arabian Tayyi' in the north used dhū, corresponding to the archaic Hebrew common relative zū, and there is some evidence that dhū was once current in Oman (cf. Brockelmann, GVG, i, 325). It therefore appears that the central and southern West-Arabian dhi was secondary. It may he due to contamination with the masculine demonstrative dhī (cf. § 7 tu), or to South-Arabian influence. We_ do not know the vowels of South-Arabian dh. Ethiopic has za, but Mehri has di, de (cf. Maltzan, ZDMG, xxvii, 266), and a form with i is preserved in Ethiopic zi'a 'that of', Amh. ya 'which, wbo'. (Cf. map No 20),

bb The quotation from Bahā' al-Janadī contains also the word $d\bar{u}$ 'not', which Hamdānī (quoted Müller, Südar. Studien, pp. 19 and 21) asserts to be Himyaritic. Near Ta'izz, in the southernmost part of Yemen, the negation 'no' is dou, da', etc. (Rossi, RSO, xvii, 471). In South-Arabian inscriptions a particle written d' occurs in CIH, 540, line 66 and in CIH, 541, of the year A.D. 543., line 50. The word is taken by Rhodokanakis and Conti Rossini (Chrest., p. 124) as 'already', but Praetorius (ZDMG, liii, 16) took it as a negation. That the word only appears in the last stages of South-Arabian writing may indicate that it penetrated from the spoken language, Himyaritic. It is not impossible that some other features of late Sabaean may find their explanation from that side. The word, the very existence of which was rejected as impossible by D. H. Müller (cf. § 2 r) may belong to the beritage from the Hamito-Semitic stage; witness the negation di used in Sidamo, a Cushitic language of southern Ethiopia (Cerulli, Studi Etiopici, ii, Roma 1938, p. 77).

cc The particle hatta 'until' was in the Yemen pronounced with 'imāla, i.e., hattē (Suyūṭī, Jam', ii, 23). Apart from having only such a late source for this, it is difficult to draw any conclusions from this statement. As we shall see (§ 8 o), the development of hattā in West-Arabian was remarkable in other respects. The Hijazi form, to judge from the spelling, must have been hattai (cf. § 10 ee). The Hudhail 'attā (?'attai) betrays contamination with 'ad(ai), which therefore must have existed in the West-Arabian area. In Sabaean we find at first the form 'd, and in later texts 'dy='adai. This may have arisen under the influence of Arabic hattai. Could Yemenite hattē in turn be due to the influence of the older Sabaean form, which was

perhaps 'adē, cf. Assyrian adi?

NOTES

¹ On Himyaritic, see next chapter.

² The Talmudic lexicon 'Arukh (ca. 1100), declares hazind 'stick with metal knob', (Mishnah Kelim xiv, 2) to be a 'Ta'ite' word.

² The Hudhail form for 'man' is said to have been mir'u (Sukkarī in Lisān, i, 150, with shāhid by 'Abū Khirāsh). Other Araba are supposed to have used nom. mur'u, gen. mir'i, acc. mar'a. Cf. also mr'lgyf in Namāra, and marqaisī in the Kinda dial.

^{4 &#}x27;Anīs (Lahajāt, p. 77, without source) says that according to some the Yemenite sound of *jīm* was current in the Tayyi' dialect. This fits in well with the present-day Shammar usage.

⁶ Professor G. R. Driver drew my attention to the rendering δώσει for ya'dteh io Ps. lxxxiv, 7. This would show that at least in one tradition of Hebrew, the root had the same meaning as in Arabic.

^e Cf. G. R. Driver, JBL, xv, 102.

⁷ Cantineau (Horan, p. 101) describes it as 'emphatic interdental fricative followed by lateral offglide'.

- ⁶ For an alleged alternance of the two consonants in the Rabi'a dialect, cf. Kofler, WZKM, xlvii, 92.
- * For the sake of simplicity I write am-throughout. Probably the vowel was subject to similar laws as that of al-. According to Maltzan (ZDMG, xxvii, 245) the article has to-day no vowel even when the word stands by itself.
- ¹⁶ Blake objects on the ground that 'one of the phonological peculiarities of South-Semitic languages is the non-assimilation of n to the following consonant'. But n was assimilated in South-Arabian (Höfner, Altsüdar, Gr., p. 25) and in the Hijaz dialect and perhaps others as well (§ 11 qq).
- ¹¹ The modern Yemenite bedouins call a young camel inferid = Classical farid (Binder, WZKM, xlviii, 96). We may be tempted to take this as in-ferid < am-farid. The m would be labio-dental as in German $f \ell l n f$.
- 18 The Prophet was fond of using Yemenite expressions (cf. § 5 v) but one does not see why he should have used the Yemenite article. Perhaps the whole saying, with its somewhat odd syntax, was originally Yemenite.
- 18 Vollers (Volkssprache, p. 168) concluded from this irregular 'nunstion' that the system of i'rāb had no meaning as applied to the TamIm dialect. This is as improbable as the view of Birkeland (Pausalformen, p. 15) who drew from the same data the conclusion that the TamIm preserved nunstion in pause longer than others.
- ¹⁴ I.e. of course mā majdariyya='an. This use of the relative pronoun (=Hebrew 'āsher, Aramaic dī) is common in early colloquial literature (cf. Goldziher, ZDMG, xxxv, 523-4).

Chapter 5

HIMYAR

a The rise of the Himyar to the hegemony of the South-Arabian world is still shrouded in mystery. Even their ancient name is not certain: the Homēritae of Greek and Latin authors points to Humair, while the Arabs know only the rare formation Himyar (which looks as if it were moulded after Midyan). Mentioned first by Pliny (vi, 161) as a people whom Aelius Gallus during his campaign (25 B.c.) found to be the largest of the South-Arahian peoples,1 they are placed by Claudius Ptolemaeus (2nd cent. A.D.) into what is now the Aden protectorate and southern Yemen. The authors of the inscription of Hisn al-Ghurab (A.D. 525) describe their country as 'land of the Himyar', and their king as 'king of the Himyar', themselves as Himyarites and 'Arhabites. Abraha (A.D. 543) claims the titles of the Sabaean dynasty, without any mention of Himyar (CIH, 541, line 6-7), but his army consists only of 'Abyssinians and Himyarites' (line 75). To the Arab writers all things South-Arabian were 'Himyaritic', no doubt because at the time of the spread of Islam this was the term current among the population of Yemen. It is therefore only natural to take all the Arabs say in connection with the Himyar as referring to South-Arabians.

b When, therefore, we find Hamdani (d. 334/946) quoting 'Himyaritic' inscriptions which bear little resemblance to South-Arabian, we cannot but reject them as forgeries. So they no doubt are. Hamdani could read the South-Arabian script to some extent, but he seems not to have known even the simplest facts about grammar or common introductory formulæ. It is for this reason not likely that he got the South-Arabian words he uses out of inscriptions-how can we imagine him to find there words such as tib 'gold' (Shahari tīb), hg 'like'2, and so on, with their correct meanings? He must, then, have got them from oral sources, from a language that was spoken in his own time and in his own milieu. How else can we explain his use of grammatical forms, such as the first sing. (§ t below), which agree with Ethiopic and modern South-Arabian, but are never found in the inscriptions? It was the colloquial language of his own time, which was called Himyaritie by those who spoke it, and was unintelligible to the Arabs, that Hamdani took to be the language in which the ancient 'Musnads' were composed. We are therefore entitled to take his texts as documents of that language.3 Examination of Hamdani's texts shows that it was basically an Arabic dialect of the Yemenite type, but with some archaic features, and with a great deal of South-Arabian loanwords. All this points to a population which had been living in the country for a long time, probably the 'rb

mentioned already in Old-Sabaean inscriptions intermingled with the remnants of South-Arabian peasantry.

c That for Hamdānī Himyaritic was a living and familiar speech is shown beyond doubt by his description of the linguistic state of affairs in the country (Jazīra, p. 134-6):

'Dialects of the inbabitants of the Arabian peninsula. Shihr and al-'As'a' do not speak correct Arabic. The Mahra speak a barbarous tongue like foreigners. The people of Hadramaut do not speak correct Arabic, but occasionally one finds among them some who can speak correct Arabic. The best Arabic among them is spoken by the Kinda and Hamdan and some of the Sadaf. Sarw Madhij, Ma'rib, Baihan, and Harib speak correct Arabic. There is little in their speech that deviates from it. Sarw Himyar and Ja'da do not speak correct Arabic: there is some trace of Himyaritic in their speech. They drawl and are prone to elision. They say yā bnu m-'amm 'o cousin' for yā bnu l-'amm, and sima' 'listen' for isma'. Lahj, Ibyan, and Dathina speak a better (or: very good) Arabic. The best Arabic among them is spoken by the Amiri of Kinda and the 'Audi. The language of Aden is new-fangled (cf. § 4 q) and bad. Some of its inhabitants are uncouth and boorish, except the educated among them. There is not much wrong with the language of the Banu Majīd, the Banu Wāqid, and the 'Ash'ar. The lower Ma'āfir talk a barbarous language, the upper Ma'āfir are better than they. The Sakāsik are middling. The upland of the region of al-Kala' speaks an excellent language, though there is in their speech some of the heaviness of the Himyaritic language. The speech of the hill country is halting. The dialects of Sahlan, Jaisban, Warakh, Khadir, Suhaib, and Badr are closely allied to that of the Sarw Himyar. Yahdib and Ru'ain speak a better Arabic than Jublan. The language of Jublan is halting. From Haql Qatab to Dhamar pure halting Himyaritic is spoken. The inhabitants of the Sarāt Madhij, such as those of Radman and Qaran, and those of its upland region, such as Radā', 'Isbīl, Kaumān, al-Hadā, Qā'ifa and Digrar speak correct Arabic. The inhabitants of upper Khaulan speak almost correct Arabic. The inhabitants of Sahmar, Qard, al-Jibla, Mulh, of upper Lahi, of Hamd, 'Utuma, Watyah, Simh, 'Anis, and 'Alhan speak a middling, rather corrupt, Arabic. Haraz, al-'Akhruj, Shumm, Mādih, al-'Ahbūb, al-Jahādib, Sharaf 'Aqyān, at-Tarf, Wādi', and al-Ma'lal are all of mixed speech, partly correct and partly corrupt. Some of them, particularly the settled parts of those tribes, speak a language close to halting Himyaritic. There is not much wrong with the speech of the district of al-'Ash'ar, the district of 'Akk, the Hakam b. Sa'd in the valley of the Tihama and their district, except for those among them that dwell in villages. The Hashid part of Hamdan living in the Sarat Hamdan are mixed, some speaking correct Arabic, such as the 'Udhar, Hinwam, and Hajūr, others a barbarous language, like some of the people of Qudam and al-Jabar. The upland district of the Hamdan country is al-Baun, including al-Mashriq and al-Khashab. Its language is Arabic mixed with Himyaritic. Of the higher upland region of Hamdan, some parts speak rather less than correct Arabic. The people of Khaiwan speak correct Arabic, but much Himyaritic is spoken among them up to Şa'da. The

district of Sufvan b. 'Arhab speaks correct Arabic, except for such things as am-rajul 'the man', qayyid ba'irāka 'tie up thy two camels' for ba'iraika (cf. § 7 f), and ra'aitu 'akhawāka 'I saw thy sisters' or 'two brothers' (cf. § 7 k). The article with m instead of l such as am-rajul, am-ba ir, is also used by the 'Ash'ar, the 'Akk some of the Hakam in the Tihama, and the 'Udhar. Matira, Nihm, Murhiba, Dhaihan, and those of the Balharith that live in the Rahba, speak correct Arabic. Sanaf in the Upper Jauf does not use correct Arabic. There is nothing wrong with the language of Kharfan and 'Athafit. The inhahitants of the Jauf speak correct Arabic, except for some of their clients from the Tihāma who live among them. The northern Nihm, Na'man Murhiba, the outer Banu 'Aliyyan, the outer Sufyan, and the Shakir speak correct Arabic. In the district of Wada'a the Banu Harh have 'imāla in all their speech (cf. § 4 h). The Banu Sa'd speak a hetter Arabic. From Dhamar to San'a' the Arabic is middling. This is the district of Dhū Jura. Among the people of Şan'a' there are remnants (sic) of pure Arabic and elements (nubadh) of Himyaritic speech. The town of San'a' itself has a variety of dialects and idioms. Every quarter has its own dialect, but those that live on the side of Sha'ūb speak different from all the others. Shihām 'Aqyan, the Maṣani', and Tukhlä speak pure Himyaritic. The people of the upland of Khaulan Şa'da speak correct Arabic. The people of its qadd and its ghaur speak a harbarous language. Good Arahic is spoken in the districts extending from al-Ird in Wada'a to Janh Fiyam, then onwards to Zubaid, to the Banu Harith and the regions adjoining the district of Shakir in Nejran, on to the country of Yam, the country of Sanhan, and the country of Nahd, then the Banu 'Usama, 'Anz, Khath'am, Hilal, 'Amir b. Rabi'a, the Sarāt of al-Hajr, Daus, Ghāmid, Yashkur, Fabm, Thaqīf, Bajīla, and the Banu 'Ali, except that the lower parts of the Sarat of those tribes lying between the Sarat of Khaulan and Ta'if speak an Arabic that is less correct than that spoken in the upper parts. In al-'Arud everyone speaks correct Arabic, except the villagers. The same applies to Hijaz and lower Nejd as far as Syria and Diyar Mudar and Diyar Rahī'a (= Mesopotamia): in all of these the inhabitants speak correct Arabic, except the villagers.

It is not quite clear on what criteria Hamdanī based his good and bad marks. Most of the dialects be mentions are not known in their present form. The colloquial of Dathīna, as described by Comte de Landherg, is certainly very far removed from literary Arabic, yet it was considered correct Arabic by Hamdanī. The dialect of Hadramaut, which he puts into a much lower category, is to-day no more different from literary Arabic than is that of Dathīna. This need not have been so in Hamdanī's time, since it is likely that arabicization has been making some progress since then, owing to new arrivals from the desert and to the effects of thirteen hundred years of Moslem education.

d The general position at the beginning of the 4th/10th century can be summed up thus: 'Correct' Arabic, i.e., a language approaching that of Central-Arabian bedouins, was spoken in the upland regions east of the Sarāt and in a few other areas, particularly the extreme south. In the

HIMYAR 45

districts adjoining the uplands, i.e., the top and western slope of the Sarāt, dialects were current which Hamdani describes as middling (mutawassit) or mixed (khulaitā). From the whole context this must mean dialects with some admixture of Himyaritic. Some districts spoke idioms described as harharous ('aghtam). What that meant we may conclude from the inclusion of Mehri among them; these were South-Arahian dialects. It is interesting that Hamdani noticed no similarity hetween them and Himyaritic. Finally, there are those districts in which the language either showed strong traces of Himyaritic (tahmīr), or was 'halting' (ta'aggud, mu'aggad), i.e., had the Himvaritic rhythm and intonation, and those where pure (mahd) 'halting' Himvaritic was spoken. The last-named were concentrated in two welldefined areas: the central mountain area around San'a' and the southern Sarāt, Map No. 4 illustrates this distribution. The factors governing it can · he easily discerned: the mountain farmers spoke Himyaritic, the hedouins 'correct' Arabic. To the west of the Himyaritie-speaking area a hroad helt showed admixture of Arabic and Himyaritic, with a preponderance of the latter in the villages. This was the part of the country which had formerly spoken Himvaritic. At some time hefore the fourth century the Arabic element had so much increased as to arabicize the Himyaritic speakers.

e We have thus in Yemen two distinct groups of Arabic speakers, quite apart from the hedouins in the east. One, ohviously the older, is represented by the Himyar and the 'substrate' population of the districts with mixed language-whether these latter had originally heen identical with the Himyar or different from them-, the other consisted of Arahs speaking dialects of the West-Arahian type, who lived as nomads or semi-nomads in the hill-districts, where they seem to have been in close contact with the older population. All signs point to the second group heing a recent hedouin wave from the north. The most likely time at which they could have arrived is the early Islamie period, during which large numbers of Yemenite Arabs emigrated into the conquered territories, thus making room for newcomers. Some of the inhabitants of the mixed helt hear names of tribes helonging to northern Yemen, such as the Hamdan, but it is significant that Hamdani speaks of districts rather than trihes in most cases, as if the people of those regions had no trihal organization of any strength. This impression is confirmed hy other data which show the country filled with small splinters of trihes. It is impossible with our present data to say whether these Arab immigrants merely moved from the poor lands of northern Yemen to the rich south, or whether they came from farther north, from Hijaz or Central. Arabia. It is, however, important to note that the direction of this migration is contrary to that which Arab tradition assumes, the migration of Yemenite trihes to all parts of Arabia after the hreak of the Mārih dam. Of course the

o Lahj

Pure Arabic

HIMYAR 47

two movements do not exclude each other. One might even say that the immigration of the latter stratum was made possible by the depopulation of the country after the first emigration. The argument against accepting Arab tradition on that point is rather to be sought in the absence of any distinguishing features of dialects of tribes considered Yemenites by the genealogists as empared with Mudarite tribes in the same areas.

f The older, 'Himyaritic', stratum was no less mixed than the later, 'Yemenite' one. It has already heen said that they may be identical with the 'Arabs' mentioned in Sahacan inscriptions, which gradually became intermingled with the pure South-Arabian stock. We may note that the areas indicated in our map as regions of pure Himyaritic are by no means identical with the centres of South-Arabian culture (cf. the map of places where inscriptions were found, in Beiträge zur Arabistik, etc., ed. R. Hartmann, Leipzig 1944, p. 57). Whence those Arabs came, and in what relation they stood to the West-Arabian tribes, we cannot say. Their original Arabic speech bears some resemblance to West-Arabian rather than to the Eastern dialects, but this impression may be due either to the archaic character of both or to influence of West-Arabian on Himyaritic. If such features as the k in the suffixes of the perfect singular (§ r) were original in the speech of the Himyaritic Arabs, then their language was very different indeed from that of the West-Arabians. 4

g Most of the Himyaritic-speaking area is outside the territory which is assigned to the Homeritae by Greek and Latin authors. It is certain that with the establishment of Himyar hegemony many people came to be called Himvar who had before helonged to other groupings. But what about the original Homeritae? Were they 'Himyarites' or pure South-Arabians? We cannot conclude much from the fact that their kings used Sabaean in their inscriptions, since even Ge'ez kings in Ethiopia did so, and such a procedure was quite normal for the Orient (cf. also Brockelmann, GVG, i, 29). The southern part of the old Himyar territory is counted by Hamdani among the regions of pure Arabic, the rest, including the capital Zafar, in the area of mixed language. Perhaps we may derive some indication from 'Abraha's distinction of Abyssinians and Himyar on the one hand and 'Arabs in mountains and plain' on the other (CIH 541, line 8), but such phrases in the titles of kings often mean little and may be taken over from the titles of predecessors.⁵ In any event it is quite likely that some Arabs were not absorbed in the mixture which constituted the later Himyarite population. More important is that the Sabaean inscriptions betray no feeling that the Himyar were in any way foreign, but mention them in the same way as other. South-Arabian peoples, e.g., CIH 350 where they are called a sh'b just like the author's own people, the Hāshid. But the South-Arabian layer in the Himyarite state may have been very thin indeed, and the majority of the

people may have heen a mixture very similar to the Himyarites of Hamdani's

day.

h Apart from the spurious inscriptions in Hamdānī, we possess two short texts in Himyaritic. One is a sentence said to have heen spoken at Dhamār hy the mother of Wahh h. Munahhih hefore his hirth in 34/654-5 (from the history of San'ā' hy 'Abdallāh 'Ahhās ar-Rāzī, quoted hy Landherg, Arabica, v, 112): رابك سعلم كولدك ابنا من طيب (approximately: ra'aiku bi-n-hulm ka-waladku ibnan min tīb) 'I saw in a (lit. the) dream that I gave birth to a son of gold'. 6

i The second text is a ditty which the soldiers of Yazīd I sang when they hesieged Mecca in 72-3 H. It occurs in two apparently unconnected sources, Balādhurī (ed. Ahlwardt, p. 48) and 'Abū Zaid (Nawādir, p. 105) and is often quoted in later works. (Cf. also Nöldeke, Beitr. z. Poesie d. alten Araber, 1864, p. 21; id., ZDMG, xxxviii, 413; Kampffmeyer, ibid., liv, 622). 'Ahū Zaid asserts that the author of the lines was a Himyarite. In Syria the Yemenite element was particularly strong (cf. Kampffmeyer, MSOS, iii, 2, p. 80 f and Sprenger, Alte Geogr. Arahiens, p. 295). We need of course not take everything in these verses as pure Himyaritic: there is obviously some admixture of Classical Arahic. The lines are:

yā bna Zubairin ṭāla mā 'aṣaika
wa-ṭāla mā 'annaikanā (text: -tanā) 'ilaika
la-taḥzananna bi-lladhī 'ataika
la-nadriban bi-saifina qafaika.
'Son of Zubair, long hast thou been disloyal,
Long hast thou troubled us to come to thee.
Thou wilt he grieved for what thou hast committed
(or: what is coming to thee).
Yea, with our sword we shall cut off thy neck.'

These verses are a rich gallery of Himyaritic peculiarities, with some of which we shall deal in the following paragraphs. Even if they should be nothing hut a parody on 'Himyaritic' speech, they still retain their value to us in showing what other Arahs considered to be typical of it.

k 'The 'inscriptions' which Hamdani made up will be found in the tenth volume of the 'Iklil and in Müller's 'Burgen und Schlösser' and 'Studien', some of them in the volumes of the Répertoire d'épigraphie sémitique. Beside these, we have the statements of philologists on the grammar and lexicography of Himyaritic. They are not always easy to evaluate, because some recur in other places as referring to Yemenite rather than Himyaritic. While there is no doubt that the two had much in common, we suspect that patriotic philologists often called words Himyaritic to lend an aura of antiquity to them. Perhaps we shall one day recover the seventh volume of Hamdani's 'Iklīl, in which he dealt with the Himyaritic language.

1 Although to our feeling Himyaritic, as shown in the documents we possess, was similar enough to Arabic, the Arabs considered it totally unintelligible. Ibn Sallām (Ṭabaqāt ash-Shu'arā', p. 4) says: 'the language of Himyar is not the same as ours, nor is their vocabulary identical with that of the Arahs'. In 375/985, Muqaddasī ('Ahsan at-taqāsīm, p. 96) reported that 'there was in the region of Himyar a tribe of Arabs whose speech cannot be understood'. The Arabs had a proverb, man dakhala Zafāri tahammara 'be who goes to Zafar must speak Himyaritic', to which an anecdote was attached about the Arab envoy who understood thib 'sit down' as 'jump', and thus found his death (Hamdani, 'Iklil, p. 39, etc.). Ibn Jinni (Khaṣā'iṣ, i, 392) states it as an accepted fact that 'the language of Himyar and the like of it are utterly different from the dialects of both Rabi'a and Mudar. Some of it may have intruded into the Arabic spoken by some, but it sounds all wrong (yusa'u z-zannu bihi)'. Neither he nor al-Fārisī could make any sense out of a passage written in the dialect of Haurit (hardly the place in Mesopotamia, Bakrī, p. 79), which unfortunately he does not quote.

m The people mocked at Himyaritic by applying to it the designation tumtumāniyya. This is variously explained as 'a form of speech resembling that of non-Arabs' ('Ardabīlī, in de Sacy, Chrest. gram., p. 118; Ibn Ya'īsh, p. 1246; Ibn 'Abdi Rabbihi, 'Iqd, i, 294) or as 'speech full of unusual (munkara) words' (Qāmūs, s.v.). Ibn Sīda (Mukhaṣṣaṣ, ii, 122) explains timtim simply as 'non-Arab'. The word timtim is used by 'Antara of a Yemenite (ed. 'Inānī, p. 212), but also of a Persian (ibid., xxvii, 2); by 'Imrān b. Ḥiṭṭān of Abyssinians ('Aghānī, xvi, 156, xxi, 12). For its meaning we may compare Mishnaic Hebrew tamṭēm 'to close', tamṭēm 'eth hal-lēbh 'deprive of understanding'. Accordingly timtim may have meant at first 'feehle-minded' and then 'barbarous'. To the philologist this general term was too vague, and we therefore find Tha'ālibī (Fiqh al-lugha, p. 107) restricting the name to a single feature, the use of the am-article.

n We get a more instructive indication in the term mu'aqqad 'halting' with which Hamdānī describes both Himyaritic itself and the dialects influenced by it. It seems that he means the same when he says that the people of Sarw Himyar 'drawl' (yajurrūna fī kalāmihim). 'Drawling' in general is due to the absence of stress accent, and was probably a feature of West-Arabian altogether (cf. § 10 p). But Soutb-Arabian must bave had a drawling of a much more pronounced character, which produced the two-peak syllables of Minaean and other dialects (cf. Rhodokanakis, Studien, i, 12-56). It is this feature which was so noticeable about Himyaritic even to a Yemenite like Hamdānī.

o This is the place to mention two further general traits of this kind, neither of which is specifically attributed to Himyaritic, but both of which seem to have some bearing upon it. Suyūţī (Muzhir, i, 134) attributes to

Yemenite Arabic as a whole a quality called shinshinna, which consists in changing k into sh, as in labbaisha for labbaika. This is not, as in Eastern Arabic, a contact-change of k before i (for the latter, cf. Barth, WZKM, xxiv, 281 ff), but the non-conditional change of k into sh (not tsh) common in modern South-Arabian (cf. Leslau, WZKM, xliv, 211). Final k becomes sh in some cases in the colloquial of Hadramaut, e.g. 'alesh= 'alaika (Maltzan, ZDMG, xxvii, 250). Indeed this sound change probably never occurred in the Yemen. Mas'ūdī (Muruj adh-dhahab, ed. Barbier de Meynard, i, 333) ascribes it to the town of Shihr in Hadramaut, to-day surrounded by speakers of South-Arabian. They say hal lash fī mā qulta lī 'can you do what you told me?' (for laka) and quitu lash 'an taj'ala lladhī ma'ī fī lladhī ma'ash 'I told you to put my things with yours' (for laka, ma'aka). The sentences Mas'udi gives look like those taken from real life, but in their form are certainly not original (cf. § 2 w). Suyūtī (quoted by Anastase, Mashriq, vi, 532) knows of a trait called fashfashat Shihr, which he identifies with the use of sh for k. However, neither shinshinna nor fashfasha seem to be obvious names for such a sound-substitution. We cannot do much with shinshinna, for which we can only compare shanshana 'rustling' (of paper, of new cloth), but fashfasha means 'to scatter' (urine), and may perhaps have meant 'to splutter'. I suggest it is nothing but the next feature.

p The language of Shihr and of Oman is said to have been marked by a feature called lakhlakhāniyya (Tha'ālibī, Fiqh al-lugha, p. 107)?. It is explained that they said māshallāh instead of mā shā'a llāh. This contraction, which can be heard in any colloquial, would hardly have been worth noting. The term must refer to something of a more general nature. The Yemenite Ibn Duraid (quoted Mukhassas, ü, 123) applies it to the settled Arab who is showing off (mutajahwar) and pretends to speak like a bedouin. In the story in Mubarrad, Kāmil, p. 364, the trait is ascribed to the language of the Iraq, but no explanation is given. 'Abū 'Ubaida (d. 210/825) equates it with 'ujma 'talking a foreign language' (Lisan, iv, 20). The same is found in the Qamus s.v., where it is added that lakhlakhani means 'speaking incorrect Arabic' (ghair faṣīḥ). In a line by Bu'aith (Lisan, iv, 20) banū l-lakhlakhāniyyāt seems to mean 'sons of foreign women'. However, lakhkha fī l-kalām means 'to speak indistinctly'. In Mishnaic Hebrew lahlah means 'to moisten', and perbaps we have here nothing but a reference to the indistinct consonants and many 'liquid' hissing sounds of South-Arabian languages, which have earned them among Yemenite Arabs the name 'language of birds' (cf. Thomas, Four Strange Tongues, p. 7). It is not easy to see how this description could be applied to the language of Oman.

q In many of our sources the use of the am- article (cf. § 4r) is specifically attributed to the language of Himyar. It also occurs in Hamdānī's 'inscriptions' and in the saying of Wahb's mother (cf. § h). But the existence of the

HIMYAR 51

same article in the Tayyi' dialect prevents us from assuming that amoriginated in Himyaritic and thence spread to the Arabic dialects. We must wait for further clarification of the relation of the Arabic element in Himyaritic to West-Arabian. In any event, as han- was used in the proto-Arabian Liḥyanic (cf. § 4 s), its occurence in Himyaritic does not constitute sny proof for the West-Arabian character of the latter.

r The first and second persons of the singular perfect had endings with k instead of t, like Ethiopic and modern South-Arabian (cf. for the latter Leslau, JAOS, lxiii, 7). In the saying of the mother of Wahb b. Munabbib we find waladku 'I bore', ra'aiku 'I saw'. Similarly in 'inscriptions': hassanku 'I fortified', ('Iklil, p. 26), bahalku 'I spoke', cf. Eth. behla (ZDMG, xliv, 191). For the second person two instances in the ditty: 'aşaika 'thou wast disloysl', 'ataika (if this means 'thou hast come' rather than 'it has come to thee'). Such forms seem to be quite current to-day in the Yemenite countryside, where they were first heard by Von Maltzan (ZDMG, xxv, 197 and xxvii, 245). He found the 'old South-Arabian verbal suffixes' (sic) at Raima, smong the Yāfi'i, Haushabī, Subaihī, Qumaishī, and Dhiyābī. Instances he quotes are: kunk 'I was', qulkulek 'I told thee', kunk 'thou wast', kunkū 'they were' (should be 'ye were'), kūnan 'we were' (but cf. § t). From a Yāfi'i he even heard 'akhadhkes 'I took it'='akhadhtuhā (with -s, as in Mehri). Landberg (Dathina, p. 290) emphatically denied all this, saying that during a few hours' stay at Raima he heard no such forms. However, Rossi (RSO, xvii, 258) expressly notes such forms for the Raima district. He heard them all along the Western slope of the Sarāt (ibid., p. 261) i.e., practically in the area over which Himyaritic speech extended in the fourth century. Dr. Serjeant (as he kindly informed me by letter) noted k- suffixes in the perfect from the Subaihi country and also from the Yarim district. The survival of these forms, so alien to the forms of Arabic we know from else where, is the strongest evidence for the truth of our theory about the Himysritic language. An instructive example of the wsy in which later philologists treated the ancient dialects is the statement in the Lisan (xx, 330) about these forms, where it is simply said that 'some Arabs occasionally substitute k for t'.

s Were the Himyaritic suffixes borrowed from South-Arabian? It is rare for such basic formative elements to be borrowed. Actually, the -ku of the first person, being the oldest ascertainable Semitic form, must have existed in the parent-language of Arabic as well, and its preservation in Himyaritic may be due to the archaic character of that language, which thus would have become separated from the rest of the Arabic area hefore the -ku suffix became replaced by -tu. But -ka and the plur. -kun are certainly secondary developments peculiar to South-Arabians and Ethiopic. We do not know at which place precisely the analogical substitution originated, but like most

E

linguistic changes it must have spread from somewhere. The focus must have been in South-Arabia, where, as we have seen, South-Arabians and Arabs lived intermingled from ancient times. Linguistic innovations do not always keep to linguistic boundaries: languages spoken in close proximity tend often to pass through similar changes, as e.g., the Balkan languages (cf. K. Sandfeld, Linguistique Balkanique, Paris 1930). The -ka, -kun suffixes in South-Arabian and Himyaritic may thus be evidence of a Yemenite Sprachgemeinschaft, rather than of loan.

t For the first plur. perfect, one of Hamdānī's 'inscriptions' has the form hyw'n, 'we lived' (Müller, Südar. Studien, p. 17). However we are to read this, it is evident that Hamdānī wanted to indicate that the suffix did not have a long vowel like the Arabic $-n\bar{a}$. Von Maltzan heard kunan, which he translates 'we were' (ZDMG, xxvii, 245). This would fit Hamdānī's form well, which could then he read haywan (the 'alif serving perhaps only to indicate the a in an unfamiliar position). But Maltzan also mistranslated the form immediately preceding, $kunk\bar{u}$ (cf. $\S r$), and as Rossi (RSO, xvii, 259) gives $s\bar{a}ran$ as third plur. fem. (this is the normal form current all over Yemen), and $sirn\bar{a}$ for the first plur., we must treat Maltzan's statement with auspicion. Perhaps the form in Hamdānī had short -na, like Ethiopic, and the 'alif is to be explained in some other way, but it may have resembled Mehri $ghal\bar{a}qen$.

u There are thus considerable survivals of the ancient Himyaritic language. Further research on the spot, including an investigation of the language of the tribe who call themselves Himyar to-day, may bring to light a good deal more. Landherg asserts that the colloquial of 'Ibb and Jibla, south of the ancient Zafār, has preserved many South-Arahian elements (Arabica, v, 111).

v It is clear that it was from the Himyar that the northern Arabs learned about South-Arabian civilization. South-Arabian words found in the Koran and elsewbere passed first through Himyaritic, where they may have suffered considerable changes. The value of such words for determining the vowels of South-Arabian forms is therefore rather douhtful. On the other hand, many words in Arabic which are generally considered loanwords from Ethiopic may in fact come from Himyaritic. So may some of the originally Aramaic words of religious content, such as $t\bar{a}b\bar{u}t$ 'ark' (but cf. § 10 v), since hoth Judaism and Christianity were strong among the Himyar. The Himyaritic language, in spite of its name for unintelligibility, seems to have been known at Mecca, presumably owing to commercial contacts. The prophet 'aimait beaucoup à se servir de mots Yémanites' (Landberg, Dathina, p. 282). We have already mentioned the saying in Yemenite (Himyaritic?) dialect concerning fasting (§ 4 t). Zaid h. Thābit (Lisān, xx, 206) reports that 'I was with the Prophet, who dictated to me a letter, when a man entered.

The Prophet said to him untu, which means in Himyaritie "be silent".' Ibn al-'A'rābī (d. 231) is quoted (Lisān, ibid.) as remarking 'the Prophet did indeed honour the language of Himyar'. Of course, some of these stories may be the inventions of Yemenite patriots. But the Yemenite and South-Arabian words are facts, showing that the Meccans, if not Muhammad personally, had learnt much from Yemen. It seems as if Yemenite words are more frequent in the Suras of the Meccan period than in the Medinean ones. This would fit into this picture. At Medina the Prophet was out of living contact with Yemenites, and learnt his ideas about Biblical and other matters from the local Jews, whose spiritual centre was Tiberias rather than Zafār.

NOTES

- ¹ According to Philby (JRAS, 1945, p. 125) the esrliest inscription in which Himyar is mentioned is CIH. 314, under 'Ilushariha Yahdub, shortly before 115 B.C., when the Hamdanid dynasty of Saba and Dhū Raidān (cf. Hartmann, Arabische Frage, p. 148) came into power. It is very strange indeed that no inscriptions by Himyarites from times prior to that seem to have been found, though the old Himyar country is one of the most easily accessible parts of the Yemen.
 - ^a Nashwān (Extr., p. 29) gives hinj 'like' as a Himyaritic word.
- ³ The first hesitating suggestion in that direction was made by Müller (Südarabische Studien, p. 19). Landberg (Arabica, v, 111) proposed a view of the nature of Himyaritic which is aubstantially the same as that defended here, except that he stresses the element of mixture a great deal more.
- 'The Himyaritic Qarida and its commentary (cf. Hartmann, Arab. Frage, p. 319) count the following tribes into Kahlan, the close brother-tribe of Himyar: Judham, Lakhm, Tayyi'; 'Ash'ar, Madhhij, Hamdan, Bajila, Khath'am, 'Azd. Discounting some possible additions by genealogical fiction, this list may contain the names of some groups which were closely connected with the Arabic substrate of the Himyar. It would account for the special position of Tayyi'. Of course all the more northerly tribes would have been thoroughly arabicized by later immigration.
 - The title is in all details identical with that of Sharahbi'll Ya fur in CIH. 540.
- ⁶ The word occurs in a tradition (Muslim, iii, 297), where it was not understood by the commentators (cf. Goldziher, Muh. Studien, ii, 243).
- [†] Kofler (WZKM, xlvii, 105) reads this *lajlajāniyya*, referring to Lisān, iii, 179. There we find *lajlaja l-lisānu* 'the tongue was numb' and *lajlāj* 'indistinct of speech, heavy-tongued', but not *lajlajāniyya*. All sources I have seen (including Anastase, Mashriq, vi, 535) bave *lakhlakhāniyya*. For *lajlaja* cf. Mishnaic Hebrew and Syriac *laghlēgh* 'speak haltingly, stammer'.
- ⁶ It must be stressed that no forms of the first and second person have ever been found in South-Arabian inscriptions. We mercly assume that the k-forms were South-Arabian because they are found both in Ethiopic and in all modern South-Arabian dialects.

Chapter 6

'AZD

a 'The 'Azd dialect is but rarely mentioned where other Yemenite dialects are specified. Even the 'Azdi Ibn Duraid, with all his ancestral pride, rarely mentions data from his own dialect. Yet the few data we get definitely place the 'Azd dialect apart from other Yemenite local idioms. It is still impossible to say in which direction these peculiarities point.

b A special problem is the existence of two 'Azd tribes: 'Azd Sarāt ('Azd Shanu'a) and 'Azd 'Uman. The modern colloquial of Oman is similar to that of Yemen, and we have had, and still shall have, occasion to point out in it survivals of the ancient central Yemenite dialect. For the language of Oman in early Islamie times we have little information. Three words are given as common to the dialects of Oman and Yemen: 'inab 'wine' (for Yemen 'Abū Hanifa in Tāj, i, 400; for Oman cf. Jeffery, Materials, p. 49), khamr 'grapes' (for Yemen 'Abū Hanīfa in Tāj, iii, 187; for Oman ad-Dahhāk, quoted by Suyūtī, 'Itqān, p. 310='Abū 'Ubaid, Risāla, p. 149),1 and fataha 'to give judgment' (Nashwan, Extr., p. 82). The first two words are somewhat doubtful, hut the third is of great interest, as fataha has that meaning in South-Arabian and Ethiopic, and must have come to the Oman dialect from Yemen. The Omani words listed by Blau (ZDMG, xxvii, 319) are of no help here. There is, however, one rather striking similarity between the 'Azd Shanu'a dialect and the language of some inhabitants of Oman (cf. & f below). Some of the data for 'Azd may refer to Oman, but faute de mieux we list them here under 'Azd Shanu'a.

c The 'Azd (distinct from Yemen) are listed among the dialects that use

'antä instead of 'a'tä for 'to give' (ef. § 4 l).

d They are not mentioned in the list of 'Ahu Zaid (Lisan, i, 14) among the dialects that elide the hamza (cf. § 11 l). I do not think any importance can be attached to this omission: probably they were for 'Abū Zaid part of Yemen.

e The dialect said 'sig 'raceme of dates of poor quality' (Jamhara, iii, 31, MS. K only, from the 'Ain of Khalil). This may be compared with the common Arabic 'idhq 'raceme of dates'. The dh would be replaced here by a sibilant, z, as in Ethiopie, Hebrew, and Accadian, and further the z assimilated to q. However, Ibn Duraid quotes from the same dialect the word mi'dhār 'veil' (Jamhara, ii, 308; Ishtiqāq, p. 136), with a dh. This is not an absolute proof, as Nashwān (Extr., p. 70) and ad-Daḥḥāk (quoted by Suyūṭī, 'Itqan, p. 310), give the same word for Yemen, where the dh was preserved, and still is (Goitein, Jemenica, p. xv), as it is also in Oman (Reinhardt, p. 4). The spelling with dh for the 'Azd dialect might thus be etymological. We

3AZD 55

cannot decide the question on the one instance of 'isq hecause it might be a contact change. Finally, we must consider the possibility that 'isq is a different root and the similarity accidental. The Lisān (xii, 122) gives 'asaq 'palm bough ('urjūn) of poor quality' as a word of the 'Asad dialect. We must strongly suspect that 'asadiyya is wrong for 'azdiyya (cf. on this confusion Freytag, Einführung, p. 76). Immediately after this the Lisān quotes the Tahdhīb of 'Azharī: ''asaq is a palm-hough, and 'asaq is ''darkness'', like ghasaq.' However, ghasaq is also 'refuse of wheat', and one wonders whether this is not ='Azdī 'isq, and an instance of the change of gh to 'ain (cf. Rhodokanakis, Dhofar, ii, 76). One sees what complications arise in any attempt to evaluate lexicographical data for phonetics or grammar.

f Another difficulty in taking 'isq as a purely phonetic development of 'idhq lies in the assimilation, which would then be posited, of z to s before q. As we shall see (§ 11 a) there is good reason to helieve that in West-Arabian q was a voiced sound, as it is now in Yemen (cf. Goitein, Jemenica, p. xiv; Rhodokanakis, Dhofar, ii, 77; Rossi, RSO, xvii, 235). In the 'Azd dialect, however, this phoneme seems to have had quite a different fate. Tahrīzī (comm. on Hamasa, p. 244) informs us that the 'Azd Shanu'a pronounced the name $qu's\bar{u}s$ as $ju's\bar{u}s$. Palatalization of q into tsh or ts hefore front-vowels is common in Central-Arahian bedouin colloquials (cf. Socin, Diwan, iii, 195), but this cannot apply to our instance, where q is followed by u. Only one parallel to this non-conditioned change of q into j is known to me, namely among the coastal tribes of Oman (Jayakar, BRASB, 1902, p. 653). The j for q has survived in 'Azd territory. At Hodeida some inhabitants of the city and surrounding country pronounce so in some words, e.g. ja'āda for qa'āda 'hed', jādirī for the tribal name Qādirī (Rossi, RSO, xvii, 464). At Zahid there is a tendency to pronounce j for q, as in julailat 'a few' =qalilat. We may draw the inference that the old dialect usage has been given up under the pressure of surrounding forms of speech. An old witness for palatalized q is the word qat 'celastrus edulis', the drug plant of Yemen, which appears as a tat in the Ethiopic chronicle of 'Amda Seyon (14th cent.; ed. Perruchon, JA, 1889, p. 282, 1. 6). We may assume that the Arab immigrants to Ethiopia came largely from the coastal districts of Yemen. This detail is a surprising confirmation of the link hetween the two 'Azd trihes. It is important to note that the assimilatory palatalization of q is restricted to Central Arahian bedouins and their Syrian offshoots (cf. Cantineau, Parlers, p. 33 seq.). We shall have further occasion to refer to their linguistic connections with the West-Arabian group. It is highly probable that the nonconditioned change in the 'Azd dialect was preceded by a stage in which the change took place only hefore front yowels. Cantineau (Parlers, p. 39; Horan, p. 123) found with the recently settled bedouins of the Hauran a tendency to turn the assimilatory palatalization of k (and q?) into an absolute

one, i.e., to say not only $d\tilde{\iota}\tilde{e}$ 'cock', but also $dy\tilde{u}\tilde{e}$ in the plural, instead of the $dy\tilde{u}k$ of the bedouins. The social conditions of the 'Azd may have been similar, and produced a similar disturbance of phonetic balance.

g Al-'Akhfash (the Middle, d. 221/836) reported that the 'Azd Sarāt preserved in pause not only the $-\bar{a}$ of the accusative, but also the case-vowels of the nominative and genitive, saying hadha Zaidu 'this is Zaid' and hadha 'Amrū' this is 'Amr' (Sībawaihi, ii, 307; Ibn Ya'īsh, p. 1271). The -ā of the accusative, though not pronounced in any style of reading Arabic to-day, was according to the grammarians dropped in pause only in the Rabi'a dialect in Mesopotamia ('Azhari, Tamrin at-tullab, p. 27; Suyūtī, Bahja, p. 17. both no doubt based on Ibn Mālik's view as incorporated in 'Alfiyya, line 79), and perhaps in context, along with the other case-vowels, in the Tamīm dialect in Najd and Yamāma ('Abū 'Amr, handed down by Ibn Mālik, quoted by Suyūţī, Jam', i, 54, cf. additional evidence in Nöldeke, Zur Grammatik, p. 9). Koranic spelling, which no doubt reflects the Hijazi usage of its time, shows that the -an in the accusative of triptote indefinite nouns was in pause sounded as -ā. The 'Azd dialect, therefore, did the same in the case of -un and -in, sounding them in pause as $-\bar{u}$ and - \bar{i} . This is obviously connected with the custom of Nabataean inscriptions of spelling Arabic proper names, whether triptote or diptote, whatever their case, and whether provided with feminine t or not, with a final w (Cantineau, Nabatéen, ii, 165 ff.). An instance of this of a much earlier time is Nehemiah. vi, 6, where the name of the Arab chieftain, who elsewhere appears as geshem, is written gashmū (gshmw) in the context of an official document, at first written no doubt in Aramaic.2 The name is probably Arabic Jushamu (cf. the Septuagint transcr. yourse), and therefore diptote. The custom of writing Arabic names with w was thus established as early as the middle of the 5th century B.C. We must, therefore, envisage the possibility that in later times it was kept up as a tradition, not as a rendering of contemporary Arabic. In the almost entirely Arabic inscription of Al-Hijr of A.D. 267 (cf. ZAss., xxii, 194; Rev. Bibl., 1908, p. 242; Comptes Rendus Ac. d. Inscr., 1908, p. 270) we find k'bw, 'bdmnwtw (diptote genitive), 'l-hjrw, and perhaps (according to Chabot's reading) qbrw (nom.) and 'l-qbrw (acc.: Lidzbarski read in both places qbwr), but hrtt = Harithatu and lqs (both in the genitive). This inscription is particularly important because it has one line in Thamudic: 'n lqd bnt 'bdmnt (corresponding to lqs brt 'bdmnwtw in the Nabataean characters). One cannot help feeling that there is some inconsistency with regard to the -w.3 Sixty years later, in the inscription of _ An-Namāra of A.D. 328 (Lidzbarski, Ephemeris, ii, 34), the (in Classical Arabic) triptote names 'Amr, Nizār, Ma'add, Maḥāj are all written with final w, though they are in oblique cases, but the diptote Shammar and the determinate al-Qais have no w. We may thus assume that at some time

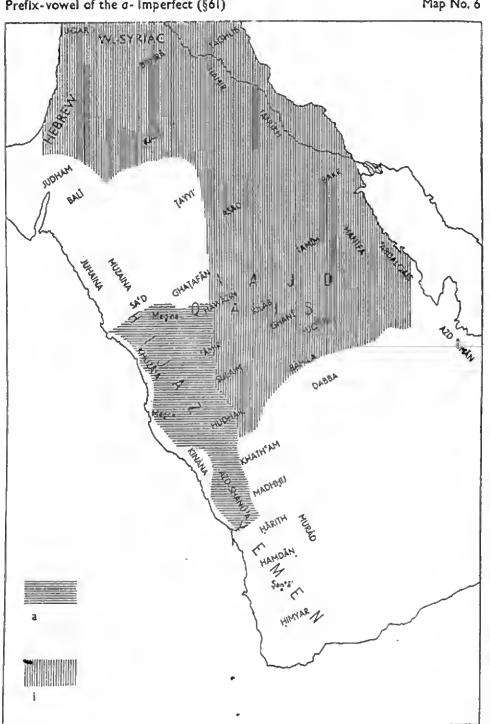

'AZD 57

between 400 B.C. and A.D. 300 a change occurred in the treatment of the i'rāb vowels. We can identify it with the rise of the diptote declension and the differentiation between determinate and indeterminate nouns. This was reflected in the difference of spelling as it still is in the difference made between 'mrw = 'Amrun and 'mr = 'Umaru. But just as the w in 'Amr does not represent a sound, but is a conventional mark for something not expressed by w in any other context, so the differentiation observable in the An-Namara inscription may express something quite different than the spelling suggests. That it does not represent a long u is obvious from the fact that it stands with words in the genitive and accusative. But at some time in history, when the spelling was first adopted, the w must have had a phonetic value, namely $-\bar{u}$, in the nominative, presumably in pause as well as in context. Brockelmann (GVG, i, 460) suggests that the 'i'rāb vowels were anceps, elsewhere (ibid., i, 83) he claims the a of the accusative was lengthened in pause. The whole conception of 'anceps' vowels is to-day being abandoned (cf. Cantineau, BSL, xxxviii, 148), and it is becoming increasingly clear that pausal forms mostly represent an older stage of the language than context forms. The long vowels would obviously have been shortened through the addition of -n, by which they came to stand in a closed syllable, and in the status constructus, where they were mostly followed by the definite article, i.e., again stood in a closed syllable. This shortening process preceded that in the case of words determined by the definite article. Last of all came the shortening, and finally the elision, of these vowels in pause. The 'Azd dialect thus represents an archaic state of things which in the Syrian desert had perhaps passed away before A.D. 328. As the Arabic substrate dialect of Nabataean and the language of king Imrulqais at an-Namara probably belonged to the 'proto-Arabian' dialects, like the Thamudic of the authors of the inscription of al-Hijr, this similarity may lead us to surmise that the special position of the 'Azd dialect within Yemen was due to its being 'proto-Arabian'. The 'Azd would thus possibly belong to the same group of early Arab settlers as the Himyar. The genealogy connecting the two (cf. note § 5 f) may thus contain a grain of truth. The present-day colloquial of the old 'Azd country, in Hodcida and part of the Tihāma, still pronounces nouns in the indeterminate state with a final -u: they say burru 'wheat', but al-burr 'the wheat' (Rossi, RSO, xvii, 465; ibid., p. 264; Landberg, Langue arabe, p. 14, 16).

h The suffix-pronoun -hu could in the 'Azd dialect be shortened in context to -h (Ibn Jinni in Lisăn, xx, 367). Earlier evidence is available in two verses quoted by Ibn Duraid as shawāhid for 'Azdi words. In connection with mitw 'companion' be quotes: fa-bittu (Lisăn: zaltu) ladā l-baiti l-harāmi 'ukhīluhu/wa-mitwāya mushtāqāni lah 'ariqāni 'I stayed all night near the sanctuary, looking out for it (a tbunderstorm), while my two

'AZD 59

eompanions were longing for it, lying awake' (Jamhara, iii, 118). To lah he remarks 'thus is his dialect'. The poet's name, given in the printed Jamhara as Ya'la b. al-'Ahwal al-Shukri, is 'Aghani, xix, 111 (where the dialect form is eliminated by writing min shauqin lahu) given as al-Yashkuri. The Yashkur b. 'Amr were closely connected with Kinana. Another, anonymous, verse is quoted in connection with fūma 'ear of eorn' (Jamhara, iii, 160, from the Kitab al-majaz of 'Abū 'Ubaida): wa-qāla rabī'uhum lammā 'atānā/ bi-kaffih fumatun 'au fumatani 'their seout said when he came to us with an ear of corn or two in his hand'. Ibn Duraid adds: 'the h of kaffih is without vowel (khuffifa), thus is his dialect'. In contrast to the preceding verse, where lahu would upset the metre, there is no necessity for the short form here; its preservation must, therefore, rest on tradition. This shortening and elision of the vowel of -hu after short vowel is contrary to the rules elaborated for Arabic by Fischer (Haupt Memorial Volume, p. 402). but appears to be in agreement with the rules for early Aramaie as stated by Cantineau (BSL, xxxviii, 152). The 'Azd were, however, not alone in this respect. Not only were forms like this read by reputable Koran-readers: the Kufans Hamza and 'Abū 'Amr, but also the Medinean 'Abū Ja'far (d. 130/748; Lisān, xx, 368), but we have it on the authority of al-Kisa'i (d. 189/805) that they were used by the 'Uqail and Kilāb tribes in Najd and Yamama, who spoke Eastern dialects (Lisan, xx, 367; cf. also 'Astarabadi, Kafiya comm., ii, 11). Sibawaihi (ii, 313) quotes a verse lampooning the 'Anaza, then living in Yamāma (Hamdānī, Jazīra, p. 162, 172), now in the Syrian desert, in which the same peculiarity is exhibited (cf. map No. 5). We can discount the Koran-readings, especially as they are principally by Kufan readers, as proof that the -h suffix was current anywhere else in West-Arabian. The forms of the Lakhm or 'Abdalqais dialect, falsely attributed to the Yemen (ef. § 4 z), show that in other Eastern dialects the suffix form was -uh, eorresponding to the -o(h) now found in most colloquials and to the -o (archaie -ōh) of Hebrew. No clear principle can be discerned in the distribution of the -h form. We do not know the vowel of the suffix in the proto-Arabian dialects, but scattered as they are over disconnected parts of Arabia, the places where the short form is used make the impression of being remnants of a formerly solid territory. Outside Arabia, the only certain parallel is Aramaic, with its -ēh, developed out of -ih (Bauer-Leander, Gramm. d. Bibl. Aram., p. 78). This arose by the addition of -h to the status absolutus, which, as we know from cuneiform transcriptions, ended in early times in -i(cf. Gordon, AfO, xii, 114, § 60). A form very similar to the Aramaic: -e, from -ih, is used in Syrian and Palestinian Fellaheen colloquials (Driver, -Grammar, p. 28). Elsewhere forms of the type -ah are used, mostly in areas where Yemenite influence is strong (Iraq, North-West Africa) and in some parts of Yemen (Barth, Pronominalbildung, p. 50). A feature which may

'AZD 61

have more historical significance than we can at present ascertain, is the distinction in certain colloquials between two forms for different styles. The Zafār colloquial in Southern Yemen has mostly -ah in prose, but -uh in its archaic quantitative poetry (Rhodokanakis, Dhofar, ii, 107). In Najd, on the contrary, -uh appears in prose, -ah in poetry (Socin, Diwan, iii, § 148 e).6

i The prefixes of the a-imperfects of all stems had the vowel a (as in Classical Arabic) in the dialects of the Hijaz, with some of the 'a'jāz Hawāzin, the 'Azd Sarāt, and part of Hudhail, while the dialects of Qais, Tamim, 'Asad, Rabi'a, and the ''ammat al-'arab' had i in those prefixes (the socalled Taltala), except for the third persons masculine ('Ahū 'Amr in Lisan, xx, 283, cf. map No. 6). Other sources restrict the area of the a-prefixes to the Hijaz alone (cf. § 12 p). Ahū Zaid (quoted Lisan, loc. cit.) even said that all proverbial sayings which originated from the Arabs should be pronounced with i-prefixes. The i-prefixes occur also in Hebrew, Western Aramaic, and Ugaritic. In the Quda'a dialects, which hordered on the Canaanite area, the third person also bad i, and there is reason to helieve that the whole differentiation between the prefixes of the two imperfect types arose secondarily within a circumscribed area and spread through the Quda'a territory into the Eastern and Central Arabic dialects (cf. the present writer's article in Journal of Jewish Studies, i, 26). The a-prefixes were thus old-inherited in Arabic, and their preservation in the 'Azd dialect marks its archaic state, not necessarily its West-Arabian origin. It may he noted here that the omission of Yemen from the list does not necessarily mean that there i-prefixes were used. We have no evidence either way, but it is probable that it went with the rest of West-Arahian. The omission of Tayyi', on the other hand, may mean that that dialect, bordering on the Quda'a area, bad also adopted the i-prefixes. These seem to have penetrated further during the Middle Ages, but the differentiation is in most colloquials obscured by phonetic factors. Further investigation on this point is necessary.

k We have a further confirmation of the use of a-prefixes in the 'Azd dialect. In connection with the reading nista'inu for nasta'inu 'we ask for help' (Koran, i, 4), Farrā' is quoted by Suyūṭī (Muzhir, i, 152, from the Fiqh al-lugha of Ibn Fāris) as saying that the na- form was used only in Quraish and 'Asad. The 'Asad dialect is expressly included among those which had i-prefixes, not only in 'Abū 'Amr's list, hut also by Farrā' himself (quoted Ibn Fāris, Ṣāḥihī, p. 19, 23; also Ihn Hisbām, Bānat Su'ād, p. 97; Mufaḍḍaliyyāt, p. 20). Obviously we must read bere 'Azd instead of 'Asad (cf. § e above).

1 One 'Taltala' form is current in Classical Arabic, namely 'ikhālu 'methinks'. This was used in the Western dialects of Hudbail and Tayyi', and probably was not a Taltala form at all, but had another origin (cf. § 8 bb). The 'Asad dialect alone is said to have used 'akhālu instead (Ibn Hishām,

Bānat Su'ād, p. 96; Marzūqī in Tāj, vii, 313; Miṣhāḥ, p. 277). Since the 'Asad, helonging to the Taltala area, would hardly have heen likely to use just this one non-Taltala form, it is to be suspected that through an old scrihal fault 'Asad has come to stand for 'Azd. This is all the more likely as traces of 'akhālu can also he found in connection with the Hijaz. Whether we consider 'akhālu an innovation on the analogy of the imperfect, or an archaic form, the collocation of 'Azd and Quraish makes geographical sense. With Hudhail and Tayyi' using the common Arahic 'ikhālu, however, the situation within West-Arahian in this respect is somewhat complicated (cf. map No. 7).

NOTES

¹ The word khamr 'wine' is probably of Aramaic origin, cf. Jeffery, Foreign Vocabulary, p. 125.

Bauer and Leander (Histor. Gramm., p. 525) cite two further instances, neither of which is acceptable. Bökhrü (1 Chr., viii, 38) seems to be nothing but bökhörö 'his firstborn' (cf. the LXX and the following verse). The pointing of MT is due to the desire to bring the number up to six—the sixth son (in LXX Aoc) having been lost. Mölikhü (Neh., xii, 14) should be read (with kethib and LXX) mallükh(i). In any case, both names are those of Jews.

^a Similar lack of consistency can be noticed already in the early Syriac inscriptions (cf. Pognon, Inscr. sém. I, Paris 1907). Normally we have final w: Ma'nū, Sharidū (A.D. 73), Muqīmū, Raḥbū (A.D. 201). The last named is feminine and therefore would be diptote. But in a connected group of texts (Nos. 3-5), Wa'il is written without w, though in Sinaitic inscriptions it has w. To illustrate the confusion, one name is w'l br mwtrw. In Palmyrene occasionally Ma'nū without w. Cf. Nöldeke, ZAss., xxi, 153.

6 By Ziyād al-'A'jamu, an Umayyad poet of 'Amir, a client of the 'Abdalqais.

A rather different view of the origin of the Aramaie form is proposed by Brockelmann (GVG, i, 312).

It might be considered whether, since -ih and -ah represent the genitive and accusative, one should not take colloquial Afabic -uh, -oh (often with audible h) and Hebrew $-\delta(h)$ as representing the nominative -u+h rather than as contractions of -a(h)u, as Brockelmann does (cf. also Bauer-Leander, Histor. Gramm., p. 226).

Chapter 7

NORTHERN YEMEN

a The dialects spoken in the northern half of Yemen and in what is now called Tihāma and Asir have so many features in common that they form a well-defined group, distinct both from central Yemenite to the south and from the Hudhail-Hijaz group to the north, though they have close contacts with both. Indeed, we shall see when dealing with the Hijaz that the philologists often attributed Hijazi (Mecean) dialect features to the Kinana dialect. We may, therefore, assume that the northern Yemenites were a West-Arabian group recently arrived in those regions (whose former inhabitants may well have been relations of the 'Azd). They may be connected with the Arab element that we identified (§ 5 e) as constituting the non-Himyaritic part of the population of the areas with tahmir, or semi-Himyaritie dialects. Hamdani in his Jazira mentions scattered groups of the northern Yemenite tribes as far south as Hadramaut. Indeed, the existence of some of the features described in this chapter in the modern colloquial of Hadramaut suggests that the Arab population of that country was recruited from the same wave as that which brought the north-Yemenite tribes. On the other hand, certain features common to northern Yemen and Tayyi' show that the north-Yemenite tribes immigrated there before the period during which the central West-Arabian dialects of Hudhail and Hijaz were subject to Eastern influence.

b The fullest list of tribes in this group (§ f below) mentions Kināna, Hārith, Khath'am, Hamdān, 'Anbar, Hujaim, Zubaid, Murād, and 'Udhra. Only the first four are mentioned with any frequency. This does not imply that where only one or two of the dialects are mentioned the point in question does not apply to all of them. It is also likely that some of the data given for the Yemen or 'some Yemenites' do in fact refer only to this group. Pre-Islamie references to these tribes are searce and uncertain. The 'sons of Hamdan' who play such an important role in Sabaean history certainly had no direct connection with the Arab tribe (cf. Hartmann, Arab. Frage, p. 264). Only the Dhu-Hamdan mentioned in the 'Abraha inscription of A.D. 543 (CIH, 541, line 85) may possibly be identified with the latter. It is likely, however, that the Arab Hamdan took their name from the South-Arabian sha'b, as the Arab Himyar did from the Homeritae. An interesting passage in 'Arḥabī'a 'Akhbār Mukhtāra (quoted by Müller, Sab. Denkmäler, p. 38, note 1) tells how the Hamdan, bedouins living in hair tents, occupied at first the high regions and fought the kings of Himyar (perhaps the South-Arabian Hamdan barons) until they succeeded in settling in the Jauf. In a letter of the Syrian bishop Simeon of Beth 'Arsham, referring to A.D. 524,

the name of the then king of Najran is given as 'Hārīth bar Ka'b' (ed. Guidi, Ac. dei Lincei, Rome 1881, p. 9 and p. 20, note 3), which is generally taken as an early reference to the Hārīth tribe. In Glaser 1000A, line 9, hrthw is enumerated among various parts of dtnt = Dathina. Grohmann (in Rhodokanakis, Altsab. Texte, p. 131) identifies this with a small group of Hārīth tribesmen in this region which Hamdānī mentions (Jazīra, p. 81, 3). This tribal splinter would thus have maintained itself for over 1000 years! But the hrthw of Gl. 1000A are settled people, possessing towns and cultivated valleys, and have probably no connection at all with the Balhārīth.

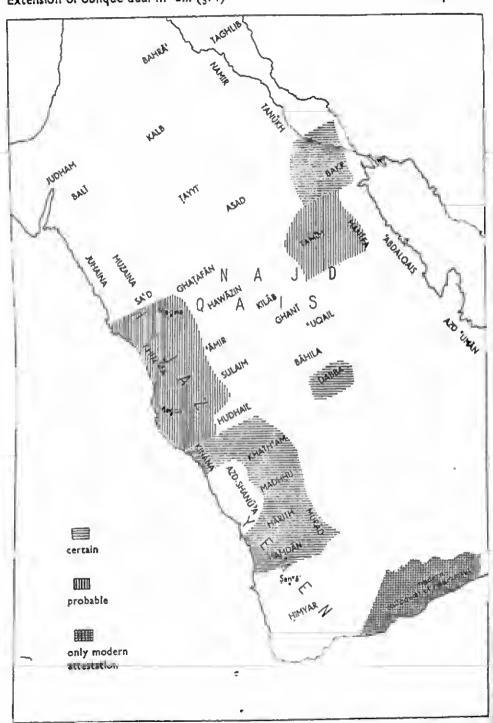

c The only information about consonant-phonemes in this region is a note by Jumahl (in Diwan Hudhail, i, 73) that the Kinana, like the Hudhail, said yāzi'ahum 'their protector' instead of wāzi'ahum. The word will be discussed later (§ 8 k) in its wider setting. We cannot say whether the Kinana dialect also participated in the other changes affecting the semi-

vowels in the Hudhail dialect.

d The Harith said $baq\bar{a}$ 'he remained' for baqiya (Lisān, xviii, 85), and $fan\bar{a}$ for faniya 'passed away' (Lisān, xx, 23; the text is corrupt). They thus bad the change $iya > \bar{a}$ like the Tayyi' (cf. § 14 i). This, although these verbs were treated differently in Hijaz (§ 12 w), was probably an old West-Arabian

development shared with Canaanite (ef. Melilah, ii, 247).

e According to 'Abū Zaid (Nawādir, p. 58) and Ibn Fāris (Ṣāhibī, p. 20), ai was in the Harith dialect contracted into a sound written a-which might have been phonetic \vec{a} or \vec{x} , but must have been felt to be quite distinct from the \bar{e} into which this diphthong is normally contracted in the colloquials. Instances given are 'alāhā 'upon her' for 'alaihā, and salām 'alākum 'peace upon you' for 'alaikum. Khalil (quoted 'Astarābādi, Kāfiya comm., ii, 124) eites as dialect forms, without specifying their provenance, 'ilāka 'to thee' for 'ilaika, ladāka 'with thee' for ladaika, and 'alāka 'upon thee' for 'alaika. The modern Hadramaut colloquial contracts ai into &, e.g. &da 'also' = 'aidan, 'æn 'eye' = 'ain (Landberg, Arabiea, iii, 38).1 It is significant in this connection that the Jewish colloquial of Central Yemen, which is one of the few Arabic colloquials to preserve ai as a diphthong, at the same time also occasionally contracts it into a or ā, e.g., wān 'wbere', 'ān 'the letter 'ain', mā 'ilak 'what has it to do with you?' = 'ilaik (Goitein, Jemeniea, p. xvii). Hebrew, too, reconstituted ai as against Canaanite &, e.g., Tell-Amarna giezi, Hebrew qayis, and at the same time some Hebrew forms show contraction of ai into a (Bauer-Leander, Histor. Gramm., p. 202). These may, as Bauer and Leander suggest, be dialect forms, but on the analogy of Jewish Yemenite we may also assume that the contraction to a took place facultatively under conditions not yet ascertained. In Jewish Palestinian Aramaie, which often preserves ai as against other Aramaie dialects, contraction into \bar{a} is not rare (cf. instances in Dalman, Gramm., p. 90). It is,

therefore, not necessary to consider that Targumie Aramaie 'alāhā 'upon her' is due to assimilation, as Cantineau does (BSL, xxxviii, 160, note 1). Indeed we have here a form corresponding precisely to those cited for the Harith dialect. In the Harith dialect, too, not every ai need bave been thus contracted. Thus the form kilai discussed below (§ i) may really have been pronounced with ai in the dialect. We get nowhere any direct information as to whether other north-Yemenite dialects had the same feature. Its existence in present-day Hadramaut speaks for a wider extension. So does its inclusion in the poem discussed in § h below, which does not seem to be specifically aimed at Harith.

f The dual had in northern Yemen only one form for the nominative and the oblique cases, namely $-\bar{a}ni$, in the construct state $-\bar{a}$. The earliest information about this comes from al-Farrā' (d. 207/822) in his Koran eommentary (on xx, 63, quoted by Beck, Orientalia, xv, 181) who heard about it from a man of 'al-'Asad' (should no doubt be al-'Azd, as 'Asad never has the article)² and quotes a line by an anonymous Harithi (the one beginning fa-'atraqa below, § h). Only the Harith are mentioned by 'Abū Zaid (Nawādir, p. 58), 'Akhfash (in Ibn Hishām, Mughnī, i, 37), Ibn Mālik (Tashil, f. 3 b), and 'Astarābādī (Kāfiya eomm., ii, 172). Lisān (xvi, 172) adds Kinana. Hamdānī (Jazīra, p. 135) and Suyūṭī (Jam', i, 21; 'Itqān, p. 192) have Harith, Kinana, and Khath'am. The fullest list is Jam', i, 40, where besides all the tribes enumerated in § b of this ehapter the form is ascribed to the Eastern dialects of Bakr ibn Wā'il and some clans of Rabl'a. A ease of this appears also in a poem by the Tamīmī Jarīr (Lisān, xii, 35 quoted § 14 r).

g The same single form for all cases of the dual was also used by some other tribes, who, bowever, coupled this with a different treatment of the final vowel, either having always -ana ('Ushmuni, i, 71; 'Astarābādi, Kāfiya comm., ii, 172) or infleeting the ending as a triptote rajulānu, rajulāni, rajulāna, or -ānun, etc., as some Arabs are aupposed to have done with the aound maseuline plural (Sabban, i, 71). According to Howell (iv, 26) Ibn 'Aqil ascribed this form to the Dabba, north-west of the Empty Quarter. The word Dabba is not found in the printed texts of Ibn 'Aqil. If the localization is correct, we would obtain an area for the extension of the single form in the dual which cuts across all dialect-group boundaries (cf. map No. 8). Moreover, it is not unlikely that the -ani for the oblique dual was also eurrent in Hijaz (cf. § 12 m), though the evidence there is not decisive. Among modern colloquials, only that of Hadramaut has -an for the dual (in all cases of eourse)—it is not quite clear whether the vowel is pure \bar{a} or the & which appears as a contraction of ai (cf. Landberg, Hadramaut, p. 352).2 The wide extension of the single form in the dual precludes any thought that this was mere phonetic substitution of -ani for -aini in the

oblique case. Rather, it bears out the opinion of Kaila (Z. Syntax d. in verbaler Abhängigkeit stehenden Nomens, etc., Helsingfors, 1906, p. 10, etc.) that the differentiation of cases in the Semitie dual and sound masculine plural is a late innovation (against this view ef. Kampffmeyer, ZDMG, liv, 657, and Cuny, La catégorie du duel, Bruxelles, 1931, p. 13). For South-Semitie this is eonfirmed by South-Arabian (ef. Broekelmann, GVG, i, 457). The use of -aini for the oblique cases of the dual is thus in Arabie a comparatively late innovation which penetrated from the general direction of the Syrian desert both into the West-Arabian and the Eastern areas, hut did not reach certain outlying dialects in both. The existence of such disconnected areas of older usage on the fringe of the territory of a language is a

well-known phenomenon of linguistie geography.

h For this, the best-attested peculiarity of northern Yemenite, we are also in possession of a number of shawāhid. Farra' quotes a sentence he heard: hādhā khattu yadā 'akhī 'a'rifuhu 'this is the seript of my brother's hands, I know it well' (ef. Orientalia, xv. 181). He further quotes an anonymous verse (also 'Ushmūnī, i, 71): fa-'aṭraqa 'iṭrāqa sh-shujā'i wa-lau ra'd/ masaghan li-nabahu sh-shuja'u la-sammama 'he lowered his head like a shujā'-snake, and had the sh. but seen a point of attack for its fangs, it would have snapped', with nābāhu for nābaihi. This line is by the Eastern Arab al-Mutalammis (I, 14, ed. Vollers, Beitr. z. Ass., v, p. 170). 'Azharî is quoted (Tāj, viii, 369) as saying that Farra' eited the line in this way, according to an 'ancient dialect of some Arabs'. This goes to support the elaim of Suyūţī that the usage was also Eastern. Another line was also first eited by Farra' (Sībawaihi, i, 27; Zajjājī, Jumal, p. 63, and in many other places): 'idhā mittu kāna n-nāsu sinfāni shāmitun/wa-'ākharu mūthnin billadhī kuntu 'aşna'u 'when I die, men will be of two elasses, he who rejoices at my misfortune and another who praises what I have accomplished's. In the ensuing discussions the possibility of sinfāni, for sinfaini, heing a dialect form is not mentioned anywhere, as far as I know. The third shahid is the line quoted by Ibn 'Aqil, supposedly for the Dabba dialect (cf. & e): 'uhibbu minki l-'anfa wal-'aināna/wa-mankharaini (sic) 'ashbahā z-zubyāna 'I love your⁵ nose and your eyes, and your nostrils resembling those of gazelles', with 'aināna for 'ainaini, and presumably originally mankharāna for mankharaini. Another anonymous line is quoted by Ibn Fāris (Ṣāḥibī, p. 20), with baina 'udhnāhu for baina 'udhnaihi 'between his ears'. Lastly, there exists a series of verses, a veritable gallery of north-Yemenite peculiarities, which was probably composed as a parody of those dialects. The first source for it seems to be Khalil (d. 175/791), who cites it merely as typical of the dialect of an unspecified group of 'some Arabs'. Later 'Abu Zaid (Nawadir, p. 58) ascribed it to a Yemenite; Jauharī (Sahāh, ii, 522) to the Hārith dialect, but in another place to Ru'ba, of the Dabba tribe. There

is nothing inherently impossible in connecting the lines with Dabba. When 'Abū Hātim asked 'Abū 'Ubaida (d. 210/825) about them, the latter answered: 'Put dots over it (unqut 'alaihi; to mark it as doubtful). This is a fabrication of al-Mufaddal' (Lisān, xix, 322). Even if Mufaddal invented them, the lines have some value as showing what he (who died 170/787) considered salient features of the dialect in question. As he was of Dabba himself, they may really refer to the language of that tribe. The doggerel occurs in many other places. I give here all the available lines; variants in brackets:

`ayya qalūṣi rāhibin tarāhā (qalūṣin rākiban)
shālū ʿalāhunna fa-shul ʿalāhā (ṭārū; fa-tir)
wa-shdud bi-mathnai ḥaqabin ḥiqwāhā (cf. §8 r)
nājiyatan wa-nājiyan ʾabāhā (nādiyatan; nādiyan)⁸
`inna ʾabāhā wa-ʾabā ʾabāhā
qad balaghā fī l-majdi ghāyatāhā

'What do you think of her as a young she-camel for a rider? They put their saddles upon them, put yours on her, And tie with a double saddle strap her flanks—Since she is swift and her sire was swift.

Verily her sire and her grandsire

Have reached the two pinnacles of noble breeding'.

i In literary Arabic kilā 'both' is unchangeable when it is followed by a noun, but has an oblique case kilai- when followed by a pronominal suffix. In the Kinana dialect, according to Farra' (in the Vienna MS. of Ibn Qutaiba, 'Adab al-kātib, p. 285) it had also before a noun the form kilai in the genitive, but remained kilā in the accusative. Ibn Mālik (Tashīl, f. 3 b; cf. 'Astarābādī, Kāfiya comm., i, 32; Suyūţī, Jam', i, 41) states that kilai was used both for genitive and accusative, but this seems to be one of the systematizing efforts of which Ibn Mālik was so fond when dealing with dialects. This appears to contradict all that has been said in the last paragraphs about the dual in those dialects, but only if one takes kilā (kilāni) as a true dual form (Brockelmann, GVG, i, 456; ii, 254). However, Sībawaihi already analysed it as a singular of the form fi'al. Ibn Hisham (Mughni, i, 172) calls it 'singular in form, dual in meaning'. In Ugaritic it is still a singular, kPat (Gordon, Grammar, p. 34), but in Moabite (kPy h'swh 'the two reservoirs', Mesha' 23) and Hebrew (kil'ayyim 'two kinds') it has a dual ending attached to it, as in Ethiopic kel'e'. The root is kl' 'to restrain', the first meaning of our word probably 'yoke'. The normal fi'āl form of this would of course be $kil\bar{a}'u(n)$, which in most dialects became $kil\bar{a}(n)$ through the usual confusion of 'alif mamdūda and 'alif maqsūra (cf. especially for West-Arabian § 10 ee). The genitive construct of this was kilā'i, the

accusative kila a. In a West Arabian dialect, where hamza was not pronounced, this became kilai and kila, i.e., the Kinana forms. The diphthone, of recent origin, was here preserved, even though older as may bave been contracted (& e above). These forms may have had a considerably wider extension than our quotation indicates: as often, Kinana may stand for the Meccan and Hijazi dialect. A pronunciation kilai for the word before nouns is attested by the spelling-occasionally found-s for kilā (Wright, ii, 214B). On the other hand, some Arabs are reported to have said kilā in the oblique case even before pronouns ('Astarābādī, Kāfiya comm., i, 32, from the Mughnī, but not in the ed. of the latter in my possession). These where the dialects where the form with 'alif magsūra was most firmly established. Since a kilā with 'alif maqsūra would normally have -ā, not -ai, before suffixes in Classical Arabic, it may be that the kilai- before suffixes goes back to kila'i in all Arabic dialects (perhaps by spread from the West-Arabian idioms) and was preserved there through being in the middle of the word, while the more independent form before nouns was changed in accordance with the usual noun-patterns of the non-West-Arabian dialects.

k In the dialect of the Sufyān b. 'Arḥab, a clan of Hamdan dwelling between Khaiwān and Ṣa'da, one could hear the phrase ra'aitu 'akhawāka (Hamdānī, Jazīra, p. 134, cf. § 4 c). This admits of two interpretations. If we take 'akhawāka as dual of 'akh 'brother', we have another instance of the oblique dual in -ā, of which another example is given in the same line (cf. § g). What reason Hamdānī saw to note this common north-Yemenite usage only in connection with an obscure group of bedouins, we cannot know. But it is also possible that 'akhawāka is plural of 'ukht 'sister', and stands for 'akhawātaka. We shall see (§ 14 z) that the Tayyi' dropped the t of the sound plural feminine in pause, and that similar forms are still current in the Najd and Syria. The elision would have gone a good deal further among the Banū Sufyān, since t fell not only in context but even before suffix. However, the whole statement is too ambiguous to be of any value to us.

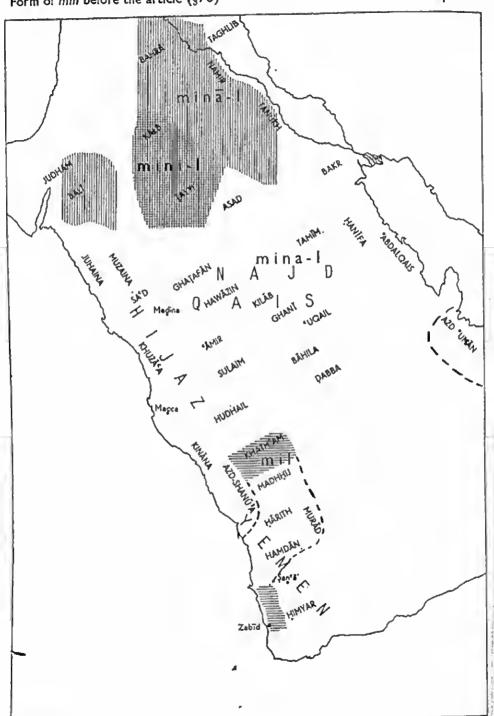

1 According to Ibn Ya'ish (p. 62) the Harith dialect used 'abā, with the indefinite article 'aban, instead of 'ab, 'abun, 'abū, etc., 'father'. Ibn Hisbām (Mughnī, i, 181) gives this as a form used by some Arabs, who also said 'akhā for 'akh 'brother'. The forms occur in the doggerel quoted above (§ h) and in a proverb mukrahun 'akhāka lā baṭalun 'thy brother is compelled, not a hero' (Maidānī, ed. Freytag, ii, 699; ed. Bulaq, ii, 2288). Nöldeke (ZDMG, xlix, 321) rejects 'abā as a grammarian's fancy, but similar forms do occur in various types of colloquial Arabic of Yemenite antecedents. In Hadramaut one says bā for 'abū (Landberg, Arabica, iii, 81); the same form is common in Persian, where it was no doubt imported by Arab immigrants in early times. In Tlemsen we find khāi 'my brother', besides būi 'my father'

(Brockelmann, GVG, i, 331). In Palestine, one hears yā bāyi 'o my father' as an interjection, similarly in central Yemen yabah (Goitein, Jemenica, p. 104). Ethiopic 'abā as clerical title may be a loan from Aramaic, but Amharic has abayye 'papa' and abat 'father'. The last-named form suggests that the Koranic yā 'abatī is also developed out of 'abā. Mishnaic Hehrew has 'abbā 'my father', 'immā 'my mother', used both as vocative and as ordinary noun (e.g., Sanhedrin, iii, 2: ne'emān 'alai 'abbā, ne'emān 'alai 'ābhīkhā 'I trust my own father, I trust thy father'). It is hard to believe that such a homely word should have been taken over from Aramaic (where 'abbā is the status emphaticus).9 What we have here are the frequent Arabic vocative forms in -ā (Wright, ii, 87D), representing most probably the proto-Semitic vocative. The -a, since it often occurs in cases where 'my' is implied, was understood to be equivalent to the suffix of the first singular, and sometimes used without vocative meaning. E.g. the anonymous line containing the words thumma 'āwī 'ilā 'ummā 'tben I take refuge to my mother' ('Ainī, iy, 247 and elsewhere). Bauer and Leander (Histor. Gramm., p. 450) even suggest that the long vowels in the inflection of 'ab, etc., were originally due to false analogy from 'aba, understood as an accusative.

m The enlargement of biliteral roots with -ā seems to have had wider extension, to judge from the forms yadā 'hand' (cf. perhaps Ethiopic 'edē-ka, etc.) and damā 'blood', said by Sībawaihi (quoted 'Astarābādī, Kāfiya comm., ii, 175) to belong to an unspecified dialect. In passing we may mention another dialect variant of 'ab and 'akh, unfortunately again without localization: 'abb (Ibn Mālik, Tashīl, quoted Lane, p. 4a) and 'akhkh (Ibn al-Kalhī in Jamhara, i, 15). These recall the Aramaic emphatic state 'abbā (cf. also the Mishnaic Hebrew forms cited above) and Hebrew 'aḥim < "aḥḥim (cf. Bauer-Leander, Histor. Gramm., p. 615).

n The Hamdan said instead of huwa, hiya 'be, she' hūwa, hīya (huwwa, hiyya), with long vowel (Ibn Mālik, Tashīl, f. 8 b; 'Astarābādī, Kāfiya comm., ii, 10, etc.; cf. Nöldcke, Zur Gramm., p. 13). From poetical quotations we learn that such forms were used over a rather wider area. Forms of the type hūwe, hīye are current in many modern colloquials (e.g., Syria, cf. Driver, Grammar, p. 25). It is not quite clear in what relation these stand to the hū and hī used in many colloquials, among them that of central Yemen (Mittwoch, Aus dem Jemen, p. 52, 58). On the other hand there seems to be a definite connection between hūwa, hīya and the hū'a, hī'a of certain colloquials (Iraq, Dathina, cf. Barth, Pronominalbildung, p. 16), of South-Arabian, proto-Ethiopic (cf. Brockelmann, GVG, i, 303), and Hehrew. One wonders whether the form, occurring as it does in a West-Arabian dialect, is not hū'a with elision of the hamza (cf. § N bb).

o The contraction mil- for mina l- (or mini l-, cf. § 14 gg) 'from the', occurs frequently in poetry from all parts of Arabia (cf. Brockelmann, GVG,

i. 263; Schwarz, Umar, iv, 111). The Lisan (xvii, 312) gives it as permitted form without any reference to dialect. However, Rafi'i (Tarikh, i, 139), without indicating his source, says that this contraction was peculiar to the dialects of Khath'am and Zubaid. Perhaps they were used in those regions in prose, too. The form is very rare in colloquials, but it does occur in Oman (Reinhardt, p. 101) and in Aleppo (Driver, Grammar, p. 214). Yemenite influence was strong in Syria (cf. § 5 i), and Oman has close linguistic ties with the Yemonite Tihāma; the modern survivals thus bear out Rāfi'i's statement. The common poetic use of mil-needs some elucidation. A form minā for min is ascribed to Quda'a (Lihyānī in Lisān, xvii, 311). The common Arabic form of min before the article is mina l-, but Tayyi' and Kalb are reported to have used mini l- instead (Lisan, loc. cit.). We seem here to be confronted with two regional forms, one which had an inherent final vowel and admitted of no contraction, and another, taking before 'alif al-waşl the same neutral vowel as other words ending in a consonant, and admitting of contraction, like the Hebrew min (Gesenius, Grammar, § 102 b)10. The extreme forms are localized at almost opposite corners of Arabia; in the intervening area the contracted form is used only in poetry-a classic instance of linguistic geography. We may not be far out, especially in view of the Hebrew connection, in considering the vowelless, contractable form as West-Arabian. We shall find further cases of assimilated n in Hijaz (§ 11 qq). 'Abū 'Ishāq (az-Zajjāj; in Lisān, xvii, 312) gives 'al for 'ani l-'from the' as another possible contraction. This is, however, extremely rare in texts. Cf. map No. 9.

p In the same context, and probably from the same source, Rāfi'ī informs us that the equally common poetic contraction 'al for 'alā l- 'upon the' had its home in the Harith dialect. In contrast to mil-, 'al- is the rule in colloquials everywhere (cf. Fischer, ZDMG, lviii, 797; Brockelmann, GVG, i, 263, 497), but in only two dialects it gave rise to a new preposition 'a for 'alā: Oman (Reinhardt, p. 94 seq.) and Syria (Driver, Grammar, p. 214)—the same that have preserved mil-. This again supports Rāfi'i's statement. Of course, the reason for the rise of 'al- and its wide popularity is quite different than that for the origin of mil-. It is the tendency to haplology (Brockelmann, GVG, i, § 97). 11

q The Kinana said na'im'yes' instead of na'am (Ibn Mālik, Tasbtl, f. 86 a; Zamakhsharī, Mufaṣṣal, p. 145, etc.). In the Lisān (xvi, 69) an anecdote about this is told on the authority of a man of Khath'am. The form was common West-Arabian, and is attested for Hudhail (§ 8 c) and Hijaz (§ 10 i). It was so much felt to be a correct Western form that the Kufan Kisā'ī read so in the Koran (Suyūṭī, Jam', ii, 76). This is of course the older form (cf. ni'ma < na'ima, Hebrew nā'ēmū'). It was preserved in West-Arabian because of the absence of the tendency to vowel-harmony (cf. § 10 f).

- r No really satisfactory explanation has been given, to my knowledge, of the adverbial idioms of the type dhāta yaumin 'one day', dhā şabāḥin 'one morning' (on the various idioms of this kind, see Lisan, xx, 345, 347). The remarkable thing about them is that the dha, etc., exercises no influence on the meaning, the phrases being equivalent to yauman, etc. Similarly one can say 'ala dhati hidatihi or min dhi hidatihi instead of 'ala hidatihi 'by himself'. I would suggest that dhā, etc., are here demonstrative elements, related to the dhā used in questions (Hebrew zeh; Gesenius, Grammar, § 136 c). They were however associated in the mind of the Arab speaker not with dhā 'this'. but with dhū 'possessor'. According to Sībawaihi (i, 95), the Khath'am dialect inflected this dha like the noun dha. He drew this conclusion from a line by the Khath'am poet 'Anas b. Mudrik (or Mudrika, cf. Schawahid-Indices, p. 60, or Nuhaik, cf. Sib. as quoted Lisan, iii, 333): 'azamtu 'alā 'iqāmati dhī şabāhin/li-'amrin mā yusawwadu man yasūdu. Sībawaihi interprets: 'I resolved upon staying one morning (before attacking), for the chief is made chief for some purpose'. But-if we can place any reliance upon context12-'one morning' is too indefinite to make sense in this verse. What is wanted is 'that morning', i.e. 'the one on which the battle was to take place. Thus dhi would be a demonstrative pronoun of the masculine = literary Arabic dhā, and it would lack the intervening definite srticle required in Arabie.
- s To deal with the syntactic aspect first; we possess a parallel from the colloquial of Zafar in Southern Yemen. There the demonstrative for both genders is normally enclitie dhi, combined with the article: esh-shughal dhi 'this business' (Rhodokanakis, Dhofar, ii, 108). For 'this is' there is a special masculine form, dhē. Twice, however, in R.'s texts dhē occurs adjectivally, both times before the noun, and without the article: once before a common noun in dhe mkan 'this place' (Rhodokanakis, i, 95, line 3), the other time before a proper name in min dhe gefgef etta dhi l-ugel 'from Jefjef to al-Ujel' (i, 96, line 12). The second case is remarkably like the Biblical Hebrew use of zeh before proper names. An old instance of a similar construction comes down in a 'tradition' concerning the Mahdi, in which there is an obvious attempt at being 'Yemenite': yatla'u 'alaikum rajulun min dhī yamanin 'ala wajhihi mashatun min dhī malakin, which can to my mind be rendered only 'a man will appear to you from yonder Yemen, on whose face will be some spittle of yonder angel'. Let it be noted that this is not a South-Arabian construction: the South-Arabian dhn bytn corresponds exactly, except for word order, with Biblical Hebrew hab-bayith haz-zeh, while the cases just discussed correspond as closely to Mishnaic Hebrew bayith zeh 'this house'. There is some evidence of proclitic zeh (also without intervening article) in Mishnaic Hebrew, though the matter is still somewhat doubtful (instances in Segal, Grammar, p. 201). However that may be, the existence of a

eonstruction of the demonstrative without article both in a Canaanite dialect and in southern West-Arahian is too remarkable to be aecidental. There are no eases in Hijazi texts of this construction before common nouns, but a dhi can in Hijazi poems be added at will to any proper name, often producing grammatically abnormal constructions (Schwarz, Umar, iv, 145). According to 'Azharī (in Tāj, x, 436) this 'otiose $dh\bar{u}$ ' (sic) was current in the speech of the Qais and their neighbours. From Lisān, xx, 344, we learn that Dhū Rumma, the poet, stated that in his native dialect one said qobbaḥa llōhu dhā fā, which must mean 'may God put that mouth to shame'. The 'Adī were reckoned among the Tamīm, but dwelt far to the West of the main body of that tribe. It seems thus that we can discern, underlying all these isolated pieces of information, that West-Arabian said not $h\bar{u}dh\bar{u}$ l-baitu but dh(i) boitu or dh(i) baitun. Cf. map No. 10.

t Hebrew zeh and Aramaie den suggest proto-Semitie dhe. In Eastern Arabic this would have become dhā, as Hebrew nër became nār (ef. § 10 aa) -thus fully accounting for the normal Arabie form. In some, unfortunately not specified, Arabie dialects dhā was pronounced with 'imāla, i.e., dhā or dhē (Sībawaihi, ii, 289; Zamakhsharī, Mufassal, p. 160). The way in which the statement is introduced in the sources suggests that these were not dialects with general 'imāla, therefore probably West-Arabian ones (ef. § 10 q). The colloquials that have forms like $dh\bar{e}$ for the masculine are the ones that most agree with Yemenite: Tlemsen, Egypt, Oman, and Yemenite ones, such as Zafār and Dathīna. In the strongly imalizing colloquials (hā)dhā is not affected, ef. e.g., Maltese da (cf. Brockelmann, GVG, i, 318; Barth, Pronominalbildung, p. 116). Theoretically, therefore, the dhī in our examples may be an attempt to write dhē. However, the Yemenite relative pronoun dhī for Tayyi' dhū (§ 4 00) suggests that there was a demonstrative dhī which attracted the relative in form. The same bappened in Hebrew where the analogy between relative zū and demonstrative zeh (fem. zō) led to the latter being employed in many biblical passages instead of the former. The Ethiopie $z\bar{e}$ is of no help, as it might be shortened from $dh\bar{e}$ as well as from dhī.

u A confirmation of Yemenite demonstrative $dh\bar{\imath}$ ($dh\bar{\imath}$) may possibly be found in another 'tradition' about the Mahdī (Lisān, xx, 338) where it is said that he will be qurashiyyun yomānin laiso min dhī wo-lā dhū 'a Quraishite and Yemenite, being neitber of $dh\bar{\imath}$ nor of $dh\bar{\imath}$ '. The explanation offered by the Lisān is that $dh\bar{\imath}$ stands for the royal house of Himyar, i.e. names such as Dhū Yazan and Dhū Ru'ain. That leaves the $dh\bar{\imath}$ unexplained. I would like to suggest that the second part of the sentence means 'being neither (wholly) of the one nor (wholly) of the other'. The $dh\bar{\imath}$ may be real Yemenite, $dh\bar{\imath} \dots dh\bar{\imath}$ having been dissimilated into $dh\bar{\imath} \dots dh\bar{\imath}$, or may be an error of tradition. Perhaps the utterance was at one point understood to mean

'neither of those who say $dh\bar{u}$ (i.e., the Yemenites), nor of those who say $dh\bar{u}$ (i.e., the Tayyi'?)'— $dh\bar{\iota}$ being taken as the relative pronoun (§ 4 aa).

v If our analysis is correct, then the conclusions of Sībawaihi are a neat instance of the shorteomings of the Arab philologists' approach to the dialects. However, Ibn Mālik (Tashil, f. 36 a) draws a truly bewildering inference from Sībawaihi's words: that the Khath'am, alone among all Arabs, did not employ dhā and dhāta in such constructions as dhāta yaumin. This is the only statement known to me which asserts that some form was not found in a certain dialect. It presupposes a detailed inquiry such as was certainly never undertaken.

w I do not know what to make of the statement of some (quoted by 'Anīs, Laliajāt, p. 99, without source) that the Harith said for the dual and plural of the relative pronoun alladhā and alladhī instead of alladhāni, alladhīna. Others ascribe the feature to part of Rabī'a. Two shawāhid, both with the dual, are hy the Taghlibi 'Akhṭal and the Tamimi Farazdaq. Tbey may represent some poetic license (cf. Wright, Grammar, ii, 379C). In the Harith dialect, if the information is correct, these forms may belong to the range of transition forms between the West-Arabian *'allai and alladhīna (cf. § 8 z).

x According to Şaffār (quoted by Ibn 'Aqīl, p. 121), the Harith dialect made the predicate of a verbal clause agree with its subject in number (the so-called *lughat 'akalūnī l-barāghīth*, ef. Wright, ii, 294C). The same usage is found in Hijaz (§ 13 b) and Tayyi' (§ 14 hh), and is typically West-Arabian.

y The use of apocopate after lau, which is extremely rare (Reekendorf, Syntax, p. 497) was by some considered a dialect feature (Ibn Mālik, Tashīl as quoted Khizāna, iv, 522; Suyūṭī, Jam', ii, 64). Of the few shawāhid cited one comes from a poem which the Ḥamāsa aseribes to a woman of the Harith trihe (Ḥamāsa, p. 496, line 1), the other: tanımat¹³ fu²āduka lau yaḥzunka ma ṣanaʿat/ʾiḥdū nisāʾi banī dhuhli bni shaibāna 'may your heart stop beating it if grieves you what a woman of the Banū Dhuhl b. Shaibān has done' (Khizāna, loc. cit.; Shinqīṭī, ii, 81) comes apparently from a fakhr-poem of the Banu Shaibān, i.e. is of Yemenite origin. This may entitle us, at least provisionally, to reckon this as a northern Yemenite usage. Since the original sense of lau is desiderative (cf. Brockelmann, GVG, ii, 31), there is some probability that the use of the apocopate with it is old, if not original, in Arabic, and the Yemenite usage (or is it generally Western?) an archaism. It is, indeed, the normal Arabic usage, indicative after lau, which needs explaining.

NOTES

¹ According to Hartmann (OLZ, xii, 28) this change is quite regular in the colloquial of the Nusairi mountains in Syria.

- 2 Since the 'Azdi reports this of another dialect, we may infer that his own dialect did not have this form.
- ³ The example given is 'aidān 'two handles'. Thus at least in some contexts ai is preserved in the particular colloquial from which Landberg took this form.
 - 'It is by 'Ujair b. 'Abdallāh aa-Salūli.
 - For this function of min, cf. Reckendorf, Syntax, § 137, 3 i (p. 258).
- $^{\circ}$ In the Sahāh (quoted Freytag, Einführung, p. 79) this line is given as proof that the 'Amir dislect changed d into j.
- The same ending is found in Eth. haque 'hip' and 'edē-hū 'his hand'. These two words are singular, but it seems that the forms originally served for the dual and were transferred to the singular when the category of the dual lapsed.
 - ² Both editions write 'akhūka, the grammars 'akhāka.
- *True, the English schoolboy says pater and the Turk peder. But these two words come from languages which in each case serve as a learned and polite idiom—which Aramaic was not in its relation to Hebrew at that time (though it has become so in the latest stages of Modern Hebrew).
- 10 Ethiopic has preserved both forms as emna and em-. The latter form makes one wonder whether in fact the South-West Arabian form was not omi rather than omin.
- ¹¹ According to Hartmann (OLZ, ix, 578), 'a occurs in the inscription of an-Namara (in 'kdy, line 2).
- 18 Professor Gibb suggests translating 'I decided to stage a morning attack' (literally 'that of the morning'). If this rendering is accepted, the ensuing discussion largely falls to the ground. However, apart from contradicting Sibawaihi, it presupposes that 'aqāma had the meaning which it has in 'aqāma s-salāta' 'he held the prayers'. This meaning is in my opinion borrowed from Jewish usage (ef. hēqīm misuāh 'he fulfilled a commandment', also Syriac 'aqīm shlāmā 'intone the Pax vobiscum'). If this lino is genuine (and its very difficulties prove that it is) it is difficult to believe that Yemenite bedouins should not only have borrowed but further developed such s technical usage.
- 13 Other reading tâmat fu'âdaka . . . 'a woman of the B. Dh. has enslaved your heart, even if it grieves you what she has done'.

Chapter 8

HUDHAIL.

a The Hudhail, though a large tribe, played a minor role in the political and cultural events of the first Islamic centuries. Their language, however, received a good deal of attention from the philologists. Although they did not produce one first-rank poet, theirs is the only one of the many tribal diwans that survived. Ibn Jinni wrote a special hook about the poetry of Hudhail (cf. Khaṣā'is, i, 130), which is unfortunately lost. No doubt it mainly dealt with the language. The Hudhail had a name for using particularly good Arabic (cf. § 3 h, i). In fact, their dialect seems to have been influenced by Eastern Arabie more strongly than any other West-Arabian idiom. This points to extensive Eastern contacts. The undoubted existence of a body of pre-Islamie Hudhali poetry in Classical Arabic points in the same direction. The language of the poems was, of course, imported from East-Arabia: it was their skill in using it which brought the Hudhail their linguistic fame. At the same time the everyday speech of the tribe absorbed features of the colloquial speech of the Eastern tribes, which gave the dialect its special place within West-Arabian.

b Basically, of eourse, there is no doubt that the Hudhail dialect was West-Arabian. Not only does it share most West-Arabian characteristics, but its known features fit precisely into its geographical position between northern Yemen and Hijaz. Besides the grammatical features to be dealt with in the course of this chapter, there are some lexical correspondences: 'awwāb 'obedient' for Hudhail, Kinana, and Qais ('Abū 'Ubaid, Risāla, p. 156); thāqib 'shining' for Hudhail (Risāla, p. 155; 'Itqān, p. 311) and Kināna (Risāla, p. 162); jadath 'tomb' for Hudhail (Risāla, p. 155; 'Itoān, p. 311) and Tihāma (Misbah, p. 144)—as against jadaf in Najd (Misbāh) or Qais and Tamīm (Sharh Dīwān al-Khansā', Beirut 1890, p. 230); kharasa 'to utter lies' for Hudhail, Kinana, and Qais (Risāla, p. 157; 'Itqan, p. 311), cf. perhaps Hebrew haras lashon (Exod., xi, 7); faur 'faces' for the same tribes (Risāla, p. 143); rajā, rajjā 'to fear' for Hudhail (Risāla, p. 151, 157), Hudhail, Kinana, and Khuza'a (Sijistānī, 'Addād, p. 81), Tihāma (Baidawi, ii, 37); 'usl as plural (?) of 'asal 'honey' for Hudhail, Kinana, and Khuza'a (Yāqūt, Mu'jam, iii, 655).

c The form na im for na was current in the Hudhail and Kinana dialects (Qasṭallānī, iv, 204). It was a general West-Arabian form (cf. § 7 q and § 10 i). Its presence here proves at any rate that the Hudhail dialect had not become affected by the Eastern tendency towards vowel harmony. The phonetic implications will be more fully discussed in § 10 f-n.

d Nor did the Hudhail dialect follow those of the East in eliding short

unstressed vowels. In the plurals of feminine segolate nouns of the type fa'la the Classical language inserts an a (fa'alāt), but not when the second radical is w or v (cf. Wright, i, 193). The Hudhail dialect inserted the a in that case, too, and said, e.g., jawazāt 'nuts', from jauza (Ibn Mālik, Tashīl, f. 6 a; Zamakhsbarī, Mufassal, p. 77; Fā'iq, i, 43, etc.). According to Suyūtī (Jam', i, 23) this was done only in nouns, not in adjectives. The independent examples refer to nouns only. One is a line by a Hudhali poet in which a male ostrich is described as 'abū ('akhū) bayadātin 'possessor of eggs' (from baida; 'Astarābādī, Kāfiya comm., ii, 190; Lisān, viii, 393), the other a reading by 'A'mash of Kufa in Koran, xxiv, 57: thalathu 'awaratin 'three times of privacy' (for 'aurātin), which Zamakhsharī (Kashshāf, p. 960) savs is in Hudhail dialect. This, of course, must not be taken to mean that Z. considered this a Hudhail reading, but that it agreed with what he knew to be Hudhail usage. Ibn Khalawaih (Badi', p. 103) declares 'A'mash's reading to be in the Tamim dialect. We know from Zamakhshari (Muf. p. 77) and Farra' (on Koran, xiii, 7/6) that the Tamim elided the a in forms like jamarāt, which they pronounced jamrāt 'coals'. Perhaps Ibn Khālawaih drew this conclusion from 'A'mash's tribal origins, or more likely, one of his sources confused Hudhail with the Tamimi sub-trihe Hanzala. We shall meet other examples of the same confusion. It is not clear whether the dialect also had a in the sound plurals of fi'la and fu'la. 'Astarabadi (Kafiya comm., ii, 189) says that to 'ir 'earavan' there existed a plur. 'iyarāt, used by 'other than Hudhail'. Should that mean 'by the Hudhail and others'? Lihyani (in Lisan, xvi, 59), commenting on the reading ni māt (ni amāt, ni imāt) in Koran, xxxi, 30/31, asserts that ni'imat was the Hijazi pronunciation. Should ni'amat have been that of the Hudhail and other West-Arabians, since we may presume ni'mat to have been an Eastern form? It is clear, in any event, that the medial vowels in these plurals are very old in Arabic and were lost to some extent in the form of language that became Classical Arabic, and completely in the Eastern dialects. They are normal in Hebrew (malkāh: mēlākhōth) and existed in Old Aramaie, as in the plur. rugazē from rugad 'wrath' in an Aramaie text in cuneiform (cf. Gordon, AfO, xii, 114, § 64). In later Aramaie, the vowels having been elided as in Eastern Arabie, their former presence can still be discerned by irregular spirantization (Brockelmann, GVG, i, 430). Some instances exist also in Ethiopic. Here, as elsewhere, West-Arabian proves to be more conservative than the Eastern dialects, with Classical Arabic taking up an intermediate position.

e Another example of the preservation of an unstressed sbort vowel is Hudhail 'ibin for ibn 'son' (Ibo Duraid, Ishtiqaq, p. 108). The medial i occurs in all those Semitic dialects that have the word (to the forms eited in Brockelmann, GVG, i, 332, add Amorite Bina-ammi, Bauer, Ostkanaanäer, p. 15, and Minaeao bhn = binu). The initial i is a difficulty, as it is not, like the

i of the Classical form ibnu, phonetically justified. Vollers (Volkssprache, p. 17) takes (i)bnu as the original Arabic form and the medial i of 'ibin as an anaptyctic vowel like those of the Hebrew segolates. This follows his theory that the 'i'rāb-vowels had disappeared at an early stage of the Arabic language. Such anaptyctic vowels are indeed frequent in the modern colloquial of Mecca (Snouek Hurgronje, Mekkanische Spriehwörter, p. 99) and other colloquials. A form exactly like that in Hudhail, of course without 'i'rāb, is current in modern Najd (Soein, Diwan, iii, 108). But there is no evidence that the ancient Hudhail dialect had lost the 'i'rāb. Rather we may take 'ibin as a compromise between Eastern (i)bnu (which, being mostly unstressed, had lost its vowel by Eastern sound-law) and Western *binu, the existence of which would thus be proved.

f The absence of vowel-harmony and vowel-clision mark the Hudhail dialect as West-Arabian. Whatever may have been the nature of Eastern influence on it, it ecrtainly did not change its basic rhythmic pattern (cf. § 10 m, seq.).

g In 'Abū Zaid's list (Lisān, i, 14) Hudhail appears among the dialects which did not sound the hamza (cf. map No. 15). This is supported by various forms cited from the dialect, which will be mentioned in the course of the discussion of this phenomenon in the Hijaz dialect (cf. § 11 l, seq.).

h Initial wu- becomes in the Hudhail dialect u-, initial wi>i.4 For the first law I have only few instances: usāda 'pillow' for wusāda (Ibn Duraid, Jamhara, ii, 267); Freytag (Einführung, p. 83) cites two lines from the Dīwān Hudhail, containing ushk for wushk 'speed' and udd for wudd 'love'; the Mcdinean 'Ubayy is said to have had in his codex ujūhuhum 'their faces' for wujūhuhum in Knran, xxxix, 61/60 (Jeffery, Materials, p. 161). Instances of wi>i are more plentiful: ishāh 'woman's girdle' for wishāh (Ibn Duraid, Ishtiqāq, p. 301; Jamhara, ii, 161), ilda 'children' for wilda, i'ā' 'vessel' for wi'ā', iqā' 'protection' for wiqā' (all Ibn Sikkīt, Qalb, p. 57). The same change is also found in the Hijazi poet Nābigha (xx, 26, ef. Lisān, i, 190) where idā' stands for widā' 'pretty ones', and a line (quoted by Ibn 'A'rābī in Lisān, iv, 458) with ijdān 'feeling' for wijdān, and finally in the common Arabic irth for wirth 'inheritance'.

i The change of wu- into u- is, of course, a result of the disappearance of hamza. An u with a 'soft on-glide' (leiser Einsatz) is practically equivalent to a wu-, w being merely an u in non-syllabic position. Therefore, when hamza disappears (always or frequently), the difference between the two weakens in the consciousness of the speaker. This has happened in many Arabic colloquials (cf. Brockelmann, GVG, i, 187), consequent upon the prevalence of soft beginning of initial vowels in them (ibid., i, 45). Cantineau (Parlers, p. 42) observed in Syrian bedouin colloquials that hamza was preserved in the initial position, as in 'edhen 'ear' ='udhn, 'ödhfer 'nail' ='uzfur, but no

HUDHAIL 83

hamza was heard in words beginning with an u < wi, as usel 'he arrived' = wisil (literary wasala) and ulād 'children' = wilād. Cantineau's treatment of hamza is unsatisfactory, as he himself admits, but the observation may be true enough: etymological hamza is facultative, but naturally appears in careful speech, while (especially in careful speech) it does not appear in those cases where etymological cognates keep the reminiscence of the w- alive (usel: wāṣil; ulād: walad). We can actually make a reversal-test. The loan word 'uqiyya 'ounce' was pronounced wuqiyya in the dialect of the Banū 'Āmir near Medina (Qaṣṭallānī, iv, 36). This could only happen if the hamza of 'uqiyya was not pronounced.

k The change of wi- into i- is contrary to the tendency of the modern colloquials, which change wi- into u- (Brockelmann, GVG, i, 187). It is only intelligible on the assumption that wi- was first changed into yi-, and the latter, by the same principle as wu > u, into i-. However, we have no statement or examples to prove that yi- became i- in our dialect. In Ibn Jinni's statement on the generally permissible changes (see below), that of yi- into iis specifically excluded. It may for some unknown reason have been considered more vulgar than the other two changes. A change of initial w into y is found only in North-West Semitic (Canaanite, Aramaic, and Ugaritic), where it is, however, general, not only before i. Of course, there, too, it may have begun as a conditioned sound-change wi->yi- and spread by analogy. The question is, did the Hudhail dialect also change w into y before other vowels? The only instance of this is yāzi'ahum 'their commander' for wāzi'ahum in a pocm by Huşaib ad-Damrī (Dīwān Hudhail, i, 73), expressly declared by Sukkari to be a dialect form of the Hudhail. Jumahi in his scholion on the passage, however, says it is Kinana dialect. As often, Kinana may stand for Western in general or Hijazi. The one instance is insufficient for deciding the case, but makes it probable that the change of w into y was more widespread than the philologists' statements allow.7

1 The Hijazi instances quoted above, though few, suggest that the sound-changes we bave discussed were generally West-Arabian. The phonetic basis—not to say necessity—for them was provided everywhere by the disappearance of hamza. The resemblance to Canaanite developments is striking. In Hebrew wu- 'and' is pronounced u-; the prefix of the third masc. imperf., yi-, was in the Middle Ages pronounced i- (cf. also Arabic 'Ishāq from Hebrew Yiṣḥāq), and some spellings in the old Testament text suggest a widespread confusion between yi- and 'i- (cf. Bergsträsser, Hebr. Gramm., i, 104). The change of w- to y- has already been mentioned. It would be strange if the same series of sound-changes had taken place in North-West Semitic and the Hudhail dialect without any intervening geographical link. Our impression is further strengthened when we find the

philologists asserting that to change wu- to u- and wi- to i- (but not yi- to i-) is correct literary Arabic (Ibn Jinnī, quoted 'Ushmūnī, iv, 222; 'Abū l-'ala' al-Ma'arrī, Risālat al-malā'ika, ed. Krachkovski, p. 6). Murādī (d. 749/1348) is quoted by Şabban (ad 'Usbmuni, loc. cit.) as stating that he had read in some book that the change originated in the Hudhail dialect. This proves to what extent these forms were accepted as correct by the grammarians. In actual fact we find hardly any examples of the 'Hudhail' forms in normal Classical Arabic. The view of the philologists can thus not be due to observation of literary usage. As it must have had some basis, we may seek it in their knowledge that a large number of important dialects, to wit the West-Arabian group, partook of this sound-law. There is certainly no evidence for the contention of Vollers (Volkssprache, p. 43 f.) that this sound-change was general Arabic, nay common Semitic. It belonged to one definite area of Semitic, namely North-West Semitic plus West-Arabian. It is to some extent paralleled by the fate of y- in Accadian, but the development of w- in that language is quite different. Eastern Arabic, South-Arabian, and Ethiopic maintain both w and y in every case; only Amharic arrived (for similar reasons) at a development similar to that of the north-western languages (Praetorius, Ambar. Sprache, p. 48).

m Some unspecified dialect (perhaps Eastern) changed both ya- and wainto a-, thus reproducing the fate of w- (and to some extent y-, cf. ūmu <
yaumu) in Accadian (cf. Brockelmann, GVG, i, 139). Thus we bave araqān
'blight' for yaraqan (Ṣaḥāḥ, ii, 67) and alab 'skin-helmets' for yalab (Ibn
al-Muzaffar in Lisān, i, 210) ad for yad 'hand' (Lisān, xx, 303).8 In two cases
the change is Classical Arabic: 'anātun 'languid woman', originally wanātun,
and the n. pr. fem. 'asmā', from wasmā' 'the beautiful one'. This is a

tendency contrary to that in the Hudhail dialect.

n An unspecified dialect said 'abīnā'u for 'abyinā'u, plural of bayyin 'eloquent' (Sibawaihi, quoted Mukhaṣṣaṣ, ii, 112). This is a similar change, but this time within the word. It is doubtful whether this has anything to do

with the Hudbail phenomena.

o The Hudhali Ibn Mas'ūd read in Koran, xii, 35, for hattā hīnin, 'until a certain time', 'attā hīnin (Jeffery, Materials, p. 49, etc.). The commentators and grammarians say that this was according to Hudhail dialect usage (Ibn Jinnī, Muhtasab, p. 42; Ibn Mālik, Tashīl, f. 57 b; Baidāwī, i, 460, etc.). Some late sources state it as a general rule that the Hudhail substituted 'ain for h (Sūyūṭī, Muzhir, i, 133; 'Ainṭābī, Qāmūs Turc., i, 284), but give few examples other than 'attā hīnin. Yāzijī (Seventh Or. Congress, ii, 77), however, presents us with a whole sentence in Hudhail dialect: al-la'mu l-'a'maru 'a'sanu mina l-la'mi l-'abyadi 'red meat is better than white meat'. As Yāzijī never names his sources and is free with 'examples' found nowhere elsc, we cannot but treat this with suspicion. Suyūṭī identifies the change of

HUDHAIL 85

h into 'ain with the fahfahat Hudhail mentioned in some works. The word means hoarseness. Travellers in Arahia remark upon the continual hoarseness of the hedouins, which is a consequence of the dewy mornings (e.g., Guarmani, Northern Nejd, p. 22), hut it is difficult to see what the change of h to 'ain has to do with this. Indeed, Suyuti himself says elsewhere that the term fahfaha refers to the change of h (not h) into 'ain in the Hudhail dialect (Iqtirah, quoted hy Bravmann, Materialien, p. 42). I have seen no other mention of such a change. In any event it is most unlikely that fahfaha is a name for either peculiarity of the dialect. The one available instance of hatta hinin does not prove the existence of a general sound law, as it admits of other explanations. We are not told anywhere that Ihn Mas'ud read 'attä for hatta everywhere in the Koran. In our case the 'ain may well he due to dissimilation (this is the opinion of Bergsträsser in GQ, iii, 68). However, all the cognate languages have 'ain in the word for 'until': South-Arahian 'd, 'dy (cf. § 4 cc), Hehrew 'adh, 'adhē, etc. Though hatta may have no etymological connection with 'ad(ai) (cf. Brockelmann, GVG, ii, 417), West-Arabian, if only for geographical reasons, must have used 'adai at some time. The Hudhail form would then be a compromise between the two. In fact, a similar form, 'etta, is to-day found in the colloquial of Zafār in southern Yemen. This was identified with the Hudhail word by Vollers (ZAss., xxii, 226); there is, however, the difficulty about this that the Zafār dialect does not elsewhere substitute 'alif for 'ain (cf. Rhodokanakis, Dhofar, ii, 76). Perhaps 'etta is a compromise between hatta and some cognate of Ethiopic 'eska. The form 'attä may not have heen restricted to Hudhail, hut seems to have been current in Southern Hijaz as well. According to a statement in the Lisan (xix, 253, without source) it was also used at Ta'if.

p From Ibn Hisham (Mughni, ii, 25) we learn that Ihn Mas'ud read in the Koran naham 'yes' for na'am9. This contradicts the statements which report that the Hudhail said na'im for na'am (cf. § c above). However, this is not the only case where Ihn Mas'ud reads h for 'ain. Farra' saw in Mas'ud's codex that he wrote in Koran, c, 9, buhthira for bu'thira 'was laid bare'. Farra' heard the same reading from one of the Banu 'Asad (cf. Beck, Orientalia, xv, 182). In this case the h may he due to assimilation to the voiceless th. The inclusion of 'Asad makes this even more probable, as we have from Tamim, another Eastern trihe, such forms as mahhum for ma'hum 'with them' (with Eastern ma' for ma'a; Sibawaihi, ii, 462) and 'ahhudu'10 for 'a'hadu 'I make a covenant' (Ibn Khālawaih, Badī', p. 125). But this does not explain naham. There is a late statement to the effect that the change of 'ain to h was peculiar to the dialect of the Sa'd ihn Bakr, north to Medina (§ 11 d). If it were somewhat hetter attested, we might see in it a local Medinean pronunciation which Ihn Mas'ud adopted into his reading. In any event, we must beware of falling into Voller's mistake of assuming tbat Koran readers lightly imported features of their native dialects into their recitation. What they aimed at was either to be true to the way in which the words had issued from the mouth of the Prophet, or to use correct Arabic. The latter tendency, which was that of the Iraqi readers, was responsible for the importation of some Eastern dialect traits into their readings, because they considered these traits good Arabic. Ibn Mas'ūd's readings betray no dialect bias. Any grammatical irregularities in them are more likely to be due to the fact that he, and the people from whose mouth he took down the text, lived before the age of grammatical activity.

q There is thus no real evidence for a sound-change h < 'ain in the Hudhail dialect. There are some instances of such substitution from an area much further north. In a few Palestinian place names 'ain appears for Hebrew or Aramaic h, e.g., Bet 'ur for Beth Horon, 'Asur for Hasor, Zanu' for Zănōah (cf. Kampffmeyer, ZDPV, xv, 25), 'Amta (in northern Transjordan) for Hamtan, etc. There are, however, also some undoubted cases in which pre-Arab aleph became 'ain in such names (e.g., 'Asqalan < 'Ashqelon, Kafr 'Anā < 'ono, cf. Kampfimeyer, ZDPV, xv, 14). The latter change is definitely attributed to the Eastern dialects. Tamīm, 'Asad, (Eastern) Qais, 'Uqail are named in this connection (e.g., by Farra' in Lisan, xvii, 168), but also Qudā'a (Tba'ālibī, Fiqh al-lugha, p. 107). The latter is of particular importance, because the Quda'a bordered on Palestine for centuries. It is not quite clear how far the sound-change affected those dialects. According to Suyūţi (Muzhir, i, 133) every initial hamza was changed, according to 'Ushmuni (iv, 212) even every hamza followed by a vowel. There are, in any event, some lexicographical instances of the change, though the grammarians never adduce any example except 'an and 'anna 'that' (where the Eastern 'ain may be of other than phonetic origin).11 In the speech of the local Aramaie population h was pronounced the same as 'aleph (Dalman, Gramm., p. 57), so that the 'ain in these names may be due to pharyngalization of such alephs by Eastern Arabs. In any case the prevailing confusion of the pharyngals in the local Aramaic makes any statement about correspondences rather bazardous. Other, equally doubtful, eases may be found among the words recorded in Talmudic literature as used in 'Arabia'. These, as A. Coben (JQR, iii, 228) bas shown, are taken from the Aramaic spoken by the Jews of northern Hijaz, but may include some Arabic loanwords. In the Palestinian Talmud, Sanhedrin, x, 2, a Midrash is motivated by the information that 'in Arabia' they said 'atar for hatar 'to dig'. In literary Arabie hatara does not mean this,12 so that it must in any case have been a local form, about which we can bardly say anything13. Similarly, we are told in Tanhumā, Tērumāh, § 7, that in Arabia 'to steal' was qebha'. Cohen (op. cit., p. 233) derives this from Arabic qabbaha, but that can only mean 'to make or consider wieked', and even qabuha 'to be wieked' never has the meaning of

stealing in normal Arabie. Nor does Arabie qaba'a help much, in spite of its diversity of meanings. There is no need to look for an Arabie etymology. The Babylonian Talmud, Rōsh Hashānāh, f. 2 a-b, has qabh'ān 'robber', a word then already not fully understood. Our qĕbha' is eognate to Arabie qabada 'to seize', and may be preserved in Syrian colloquial Arabie qaba' 'to pull out'. The two cases cannot be used as argument. The only case in which we really bave 'ain for h is when the Palestinian Bar Qappārā addresses the Babylonian Rabbi Ḥiyyā playfully as 'Iyyā, moeking at his Babylonian Aramaie pronunciation (Bab. Talmud, Kĕrīthōth, 8 a).

- r The fate of the pharyngals in the Hudbail dialect is thus not at all clear. For all we know it may have largely lost the pharyngal articulation, and 'have become 'alif and h > h, as in modern Yemenite eolloquials to the south and in the old Hijaz dialect to the north (cf. § 11 e, f). A certain indication of weak pharyngal articulation may be seen in the absence of influence of pharyngals on adjoining vowels. We shall meet such eases in the Hijaz (§ 10 g, seq.). For Hudhail I have only hiqw 'loins' for haqw (Täj, x, 95). The form with i would be the original one, if the word is connected with Hebrew $h\bar{e}q$ (Barth, Etym. Studien, p. 61), but Haupt (AJSL, xxvi, 227) compares the Hebrew word with Arabie $kh\bar{a}q$ 'vulva'. On either assumption the form is difficult, since the Hebrew form points to *haiq (Bauer-Leander, Hist. Gramm., p. 202). Cf., however, the eases (§ 10 i) where the Najd dialects have i for western a.
- s Absence of the rounding influence of labial consonants is responsible for the difference between Hudhail 'imm and Classical 'umm 'mother' ('Aghānī, xxi, 43: in Jamhara, i, 20, as dialect form without mention of Hudhail). The form 'imm, yimm, is used in several Arabic colloquials, thus proving that it was in ancient times not restricted to the Hudhail dialect. The central Yemen colloquial uses to-day 'umm (Goitein, Jemenica, p. 28), but this, like other features of that dialect, may be of post-Islamic importation. Perhaps we should oppose West-Arabian and Canaanite 'imm to East-Arabian, Aramaic, and Accadian 'umm (Mishnaic Hebrew 'ūm is a technical word and probably borrowed) as alternative Proto-Semitic forms.
- t Instead of 'aṣāya 'my staff' the Hudhail said 'aṣayya, and similarly qafayya 'the nape of my neek', hudayya 'my guidanee', hawayya 'my desire'. The earliest witness to this is Ibn Ḥabīb (d. 245/859; in Lisān, xx, 249; cf. further Zamakhsharī, Mufaṣṣal, p. 44; Tabrīzī, Ḥamāsa comm., p. 22; Baiḍāwī, i, 593; Ibn 'Aqīl, p. 354). The form is found in a line by 'Abū Dhu'aib (Dīwān Hudbail, ii, No. 1, 7), but it is not restricted to that dialect. 'Isā b. 'Umar (d. 149) declares it to be Quraish dialect. It is common in Koran readings. The Basrian grammarian Ibn 'Abī 'Isḥāq al-Ḥaḍramī (d. 117/735) read in xx, 19, 'aṣayya 'my staff', and in vi, 163/162 maḥyayya 'my life'. The Basrian al-Ḥasan and others read in xii, 19, yā bushrayya 'good

news to me' (where the textus receptus has bushrä). Some read in ii, 36/38 hudayya 'my guidanee'; this is the reading of the Samarkand codex (ef. JAOS, lxii, 183). Zamakhsharī (Kashshāf, p. 646) tells us that in his own time (he died at Meeca 538/1143) the people of the Sarāt said in prayer yā sayyidi wa-maulayya 'my Lord and Master'. These forms belong to the same paradigm as the Himyaritie qafaika 'thy neck' (§ 5 i) and the certainly Western expressions labbaika 'hail to thee' and sa'daika 'good luck to thee'. The old ai, with which these nouns ended in proto-Semitic, is here preserved, as it is in Classical Arahic in 'alaika, 'alayya, etc. (cf. Sarauw, ZAss., xxi, 40). In the dialects outside West-Arabian the final ai of both nouns and prepositions had become, according to a sound-law peculiar to those dialects, first & and then, together with the common Semitic &, had coalesced with the strongly imalized \bar{a} . In the nouns the \bar{a} of the absolute form spread by analogy to the forms with suffixes, while in the prepositions the suffixed forms kept their old vocalization. The difference is perhaps due to the circumstance that the prepositions never would appear in free final position, and the change was transferred to their suffix-less forms by analogy after it had existed for some time in the nouns. In West-Arabian the -ai was preserved as such in the free final position (ef. § 10 bb), and, therefore, there was no ground for introducing \bar{a} into the suffixed forms. We must, therefore, assume tbat West-Arabian said not only 'aşayya, 'aşaika, but also "'aşaihū (cf. § 10 f), *'aşaihā, etc. Cases of different vocalization in West-Arabian texts are of course no argument against this, as they are either proof of the more thorough command of Classical Arabic on the part of the authors, or the result of later correction. If we find in a poem by a Harithi (Hamāsa, p. 22, line 2) the form hawāya 'my longing', this might well be evidence for the change $ai > \bar{a}$ peculiar to that dialect (§ 7 e). Astarābādī is no doubt right in remarking that there is no similar 'change' in the dual: the Hudhail said 'aşayya, but khalilaya 'my two friends' (Kāfiya comm., i, 294). His remarks would hardly have been necessary, but for the view held by the Arab grammarians (e.g., Ibn Mālik, Tashīl, f. 61 b) that there was in 'aşayya assimilation of the 'alif',15 which of course should affect every 'alif in the same way.

u The indeterminate state of these words in the Hudhail dialect was according to Ibn Duraid (Jamhara, iii, 488) 'aşan, qafan, just as in Classical Arabic.

v The situation is somewhat complicated by the fact that some of the nouns just discussed are from roots tertiæ w. Both qafan and 'aṣan are spelled with final 'alif. The verb belonging to qafan is qafā, yaqfū 'to follow closely'; from 'aṣan we have 'aṣautu 'I struck with a stick'. In the Yemenite dialect it was 'aṣwun (§ 4 v). There was, however, also a verb 'aṣaitu and 'aṣītu, which the lexicographers rather artificially distinguish from 'aṣautu.

HUDHAIL 89

Ibn Sīda (in Lisān, xix, 294) calls 'aşaitu a dialect form of 'aşautu. This is the common Arabic confusion of tertiæ w and y. Conversely, the common 'inan (with y) 'hour of the night', was in some dialect 'inwun (Ibn 'A'rābī in Lisān, xviii, 52). On the evidence of 'aşwun we may identify that dialect as Yemenite.

w The type *'aṣaiun seems not to have been the only one taken by these nouns The above-mentioned 'inan 'hour of the night' appears as 'inyun in a line by the Hudhali al-Mutanakhkhil (Ibn Wallād, Maqṣūr wa-mamdūd, p 7; Lisān, loc cit). This corresponds to the Yemcnite 'aṣwun. It presupposes *'inayun, and was perhaps peculiar to some part of Hudhail. The plural 'ānā' is said to be Hudhail dialect ('Abū 'Ubaid, Ris., p. 143; Suyūṭī, 'Itqān, p. 311).

x In Koran, xi, 107/105 the Damascene Ibn 'Amir (of Yemenite origin), and the Kufans 'Aṣim (of 'Asad) and Ḥamza (of Taim) read yauma ya'ti (Baiḍāwī, i, 447). It is not possible to take ya'ti as jussive. Zamakhsharī (Kashshāf, p. 632) remarks that such forms are frequent in the Hudhail dialect. If In fact the shortening of final ī is a well-established trait of the dialect of Ḥijaz, and probably of West-Arabian as a whole, affecting also the

dialects of 'Asad and Qais (cf. § 10 gg and map No. 13).

y The Hudhail dialect, in contrast to Yemen (§ 4 aa) and Tayyi' (§ 14 v) employed the common Arabic relative pronoun alladhī. A form alladh is found twice in a line by an unknown Hudhali (Dīwān Hudhail, i, 287) and in another, also by an unknown Hudhali (Lisān, xx, 342; Khizāna, ii, 498). Al-Laith (Lisān, lac. cit.) says this is a form used by some Arabs, but 'Andalusī (quoted 'Astarābādī, Kāfiya comm., ii, 40) denies this, asserting that it is within the limits of poetic license. We know that poetic license often reflects archaic or dialect usage. The relation between alladhī and alladh is the same as between Biblical Hebrew hallāzeh 'this' (Gen., xxiv, 65, xxxvii, 19; both JE) and the more frequent hallāz. Barth (Pronom., p. 158) argues that alladh is the older form, alladhī being due to the influence of allatī. But in a Western dialect like that of the Hudhail, alladh can be accounted for by the West-Arabian shortening and elision of final ī. The form alladhī was also used in Hijaz (§ 12 i) and may there have been subject to the same shortening.

z For the plural of alladh(i) we are given two forms. Ibn 'Aqīl (p. 39) and 'Astarābādī (Kāfiya comm., ii, 40) say the Hudhail use alladhūna for the nominative (as against Classical Arabic alladhūna for all cases). Zamakhsharī (Mufaṣṣal, p. 56) cites this as unspecified dialect. Ibn Hisbām (Bānat Su'ād, p. 81) says 'either the 'Uqail or the Hudhail use alladhūna, and the Hudhail use alla'ūna'. The matter seems decided by the shāhid, attributed to the 'Uqailī 'Abū Ḥarb al-'A'lam (cf. Schaw.-Indices, p. 53, b. 5), containing alladhūna, thus leaving allā'ūna as the form which was used by the Hudhail

dialect. 'Abū Ḥayyān (in his comm. on Ibn Mālik's Tashīl, quoted Shinqīṭī, i, 58) asserts that allā'ūnā, oblique case allā'ūna, was used by part of Hudhail, though the shāhid (Shaw-Ind. 52, b. 6) is quoted by Farrā' (Lisān xx, 342) and others without allusion to Hudhail. This euriously resembles the allā'ī used for the plural in Hijaz (§ 12 i). Possibly allā'ūna is nothing but one stage in the transition from West-Arabian *'allai to Classical Arabic alladhīna.

aa In 'Abū 'Amr'a comprehensive statement on the vowel of the prefixes of the a-imperfect (ef. § 6 i and map No. 6) it is said that the Hudhail partly had a, like the Hijaz, partly i, like the Eastern dialects. This illustrates the peculiar position of this dialect. The i-forms, of recent origin in the East, had by 'Abū 'Amr's time (d. 154) penetrated only part of the Hudhail area, or were perhaps used concurrently with the old forms. The only example for i-prefixes which we get for this dialect is, however, an erroneous one. 'Aşma'ı ('Addad, p. 52, cf. Lisan, i, 386) quotes a linc by Dukain ibn Rajā' al-Fuqaimī (d. 105 H., cf. Yāqūt, 'Irshād, iv, 200) in which the word nirbabuhu 'we rear him', for narabbuhu, occurs. He declares that the i in the prefix is according to the Hudhail dialect. Fuquim, however, was a clan of Ḥanzala, belonging thus to Tamīm, and probably 'Hudhail' ia a copyist's mistake. The really interesting thing in the word is not the prefix, but the strong imperfect of med. gem., which reminds one of modern South-Arabian and Ethiopie, and of the strong forms in the Hijazi jussive (§ 12 y). A similar form occurs in a hadith of doubtful origin: limā ya ruruka because of what disgraces you' (Zamakhsharī, Fā'iq, ii, 67; Lisān, vi, 232). It may have been current in some dialects, since it is allowed by poetic license (Wright, ii, 378).

bb With regard to 'ikhālu 'methinks', Marzūqī (as quoted by Tāj, vii, 313) says that this common Arabic form was of the Tayyi' dialect. As quoted by Freytag (Einführung, p. 82) he said that 'ikhālu originated in Hudhail, spread thenec to Tayyi3, and then to all other dialects. We have mentioned Marzūqī's further assertion, that only the 'Asad said 'akhālu, and have claimed this form for the 'Azd (§ 6 l). It occurs also in Hijaz (§ 12 p). The word is probably not a case of the Eastern imperfect with i-prcfixes, but entirely independent. Vollers (ZAss., xvii, 308) gives several instances in which initial 'a- before a velar or guttural consonant followed by a in the next syllable was dissimilated, e.g., 'ikhwān 'brother', 'ihdā 'one' (fem. of 'ahad). All these cases can also be explained in some other way, but in their entirety suggest a pattern for 'ikhālu. The word, being used as a parenthesis, was pronounced with very weak stress or none, and thus more exposed to the action of phonetic tendencies. It is impossible to know what exactly Marzūqi's statement means, but it appears to imply that Hudhail and Tayyi' had 'ikhālu, as opposed to neighbouring dialects.

cc The Hudhail dialect used mata (or rather the West-Arabian form matai) as a preposition (Ibn Mālik, Tashīl, f. 58 a; Ibn Hishām, Mughnī, ii. 21; Aşma'ı and Farra' in Lisan, xx, 364, etc.). According to the philologists it was equivalent to bi-, wasta, and min 'in, into, out of, from'. The meaning 'into' is exhibited in the stock example, first quoted by 'Abū Zaid, wada'tuku matä kummī 'I put it into my sleeve'. Ibn Hishām even says that matā was, in other dialects too, a noun equivalent to wast 'middle, inside'. All this appears to be fancy. In the quotations from Hudhali poets it always means 'from': 'Abū Dhu'aib, xi, 8 ('from the depths'); 'Abū l-Muthallam, v, 3 ('from her flanks'-other reading lada); Sā'ida b. Ju'ayya, ix, 6 ('lightning from a heavy cloud'); and a line by an unnamed poet in Lisan, loc. cit. ('drunkenness from wine'). This encourages us to compare this mata with the equally strange Hebrew temporal preposition midde (? < *maddai) 'sinee, from . . . to', the manifold constructions of which betray some uncertainty in handling it. It is not possible to connect midde with kedhe 'enough for, so that', etc., as no trace of the meaning of 'enough' can be detected in it. The equation is here offered with all due reserve.

dd According to Farrā' (in Lisān, xx, 350), some Arabs used 'idhin with the function of 'idh-dhāka 'at that time', like Hebrew 'āz. This is an archaism, since the compound terms hīna'idhin, etc. (list in Nöldeke, Zur Grammatik, p. 63) presuppose an earlier use of 'idhin in this way all over Arabia. The only examples available come from Hudbali poets: 'Abū Dhu'aib (ed. Hell, xviii, 2) and Sā'ida b. 'Ajlān (Dīwān Hudhail, xxvii, 13). The Hudhail used also, according to Farrā', a compound of 'idhin not known elsewhere, 'awāna'idhin, found in a line by Dākhil b. Ḥarām al-Hudhali (Dīwān, 124, 11). Perbaps the implication is that 'awān 'time' was a Hudhali or West-Arabian word.

ee In discussing Koran, lxxxvi, 4, 'in kullu nafsin lammā 'alaihā hāfizun, Farrā' rather hesitatingly suggests that the Hudhail employ after 'in 'not' lammā instead of 'illā 'except' (Orientalia, xv, 214). We shall discuss the 'in kullu . . . lammā construction later (§ 13 e). Farrā's suggestion does not help to explain it, but may be based on some actual point of Hudhail usage, not necessarily correctly understood.

ff The construction 'ammā 'anta barran fa-qtarib' if thou art pious, approach', gave the Arab grammarians great difficulties. Fischer (ZDMG, lxiii, 597-602) rejects it as a philologist's invention. One does not quite see why the philologists should have invented such beadaches for themselves. There are only two shawāhid. The first: 'immā 'aqamta wa-'ammā 'anta murtaķilan/fa-llāku yakla'u mā ta'tī wa-mā tadharu 'whether thou remainest or art about to depart, Allah guards what thou dost or dost not do', is ascribed to a Hudbali (cf. Schawahid-Indices, 90, b. 1). The other is generally said to be by the Sulami 'Abbās b. Mirdās, but in Broch's Mufaṣṣal edition (p. 34,

line 8) is said to be by a Hudhali. In the Khizāna (ii, 81) this ascription is attributed to a commentator of the Mufassal. Whether right or wrong, it shows a tradition that this construction was Hudhail dialect. There is certainly no cause to deny its existence. It fits in well with the use of accusative after 'ammā in West-Arabian (cf. § 13 cc, seq.) . It would be attractive to connect it with the West-Arabian 'immā 'if' (§ 13 oo), with which it is in parallelism in our first shāhid.

NOTES

- ¹ Sībawaihi (ii, 458) quotes 'Abū l-Khaṭṭāb as saying that ni'ima for ni'ma 'how good' waa Hudhail dialect. This is not necessarily na'ima with vowel-harmony, but might be an 'Aufaprengung' of ni'ma. Still, the form is hardly Hudhail dialect, as the shāhid given is by Tarafa of the Eastern tribe of Bakr.
- ^a In Lisān, xiv, 217, ascribed to Ibn Harma (d. 150/767), himself of Hudhail or Kinana (cf. 'Aghānī iv, 102).
- ⁹ A very aimilar contaminated form is the early colloquial *ibint*, *abint* 'daughter' (Harīrī, Durra, ed. Thorbecke, p. 118), fram *bint* and *ibna*.
- ⁴ Although, of course, these forms are written with hamza in the Arabic sources, I am not marking the hamza, since the whole raison d'être of the sound-change is its elision.
- ⁶ Lisān (xx, 284) and Tāj (x, 397) write lughatun 'āmmiyyatun 'vulgar form' for lughatun 'āmiriyyatun. The phraseology of the Tāj clearly shows that a dialect, not a vulgarism is meant. The confusion is not infrequent.
- *A parallel case may be seen in Modern Arabic reading style. Speakers who will contract most ai into δ will often refrain from contracting au into δ .
- ⁷ Both Hebrew and Ugaritic have some words which did not change w into y. This incomplete working of a sound-law is not uncommon as a phenomenon in linguistic geography.
- * Freytag (Einführung, p. 89) gives ad for yad as form of the dialect of Lihyan, whom he calls a section of Hudhail. It seems more probable that the North-Arabian Lihyan of the inscriptions are meant. Perhaps this change belonged to the later atages of 'Proto-Arabian'. I have not been able to trace Freytag's acurce. Perhaps ad goes back to some pmto-Semitic form without y, cf. Canaanite badiu 'in his hand' (Amarna, 245, 35), Ugaritic bd 'in the hand of', and Ethiopic ed.
 - No auch reading is quoted in his name in Jeffery's Materials.
- ²⁸ In spite of the editor's doubts, this reading, found in both MSS., must be the right one, not his emendation 'aḥḥadu, which in Tamīm would have become "'iḥḥadu (§ 6 s). The Kufan Yaḥyā b. Waththāb read 'i'hadu.
- ¹¹ 'Anīs (Lahajāt, p. 7) says that the Egyptian bedouina (sukkān al-bawādī al-miṣriyya) change hamza to 'ain, but does not specify in what contexts. The Arab philologists identify the change of hamza to 'ain with 'an'anat Tamim, but this is much more likely to have been some general characteristic of Tamim apeech (cf. § 14f). The verb 'an'ana means' to mosn', so that the name may have indicated some peculiar intonation.
- 12 The original meaning of the word, 'to pierce' (sa in Hebrew) is reflected in the phrase hatarahu 'he stared at him', abbreviated from hatarahu bi-'ainaihi 'he pierced him with his eyes'. Compare the imagery often repeated in Arabic poetry, of the beloved shooting arrows from her eyes, and Old Egyptian sti 'to shoot; to stare'.
 - 13 Possibly the verb is Hebrew, derived from Mishnaic 'ether 'pitchfork'.

HUDHAIL

- 14 However, Ethiopic haque, hauge also has a.
- ¹⁵ For the Arab philologist, of course, d was a combination of a and ${}^{\circ}alif$, as \bar{u} was one of u and wdw.
- 16 In the line containing the words shtar land sawiqan 'buy us gruel' (anon., Ibn Ya'ish, p. 1320; Hamawi, Sharh shaw. al-Kashshāf, p. 95), for shtari, the fall of i has nothing to do with the phenomenon discussed here. The form is said to be Tamim dialect. What we have here is absorption of the short vowel by r. It is doubtful whether this was restricted to any dialect. In Koran, xli, 29, Ibn Kathir, Ibn 'Amir, Ya'qūb, and 'Abū Bakr, i.e., largely Hijazi readers and their followers, read 'arnā for 'arinā 'ahow us' (Baidāwī). The Tamīmī 'Abū 'Amr, who was born at Mecca and lived in Basra, read in lxvii, 20, yanşurkum for yanşurukum, in vi, 109, yush'irkum for yush'irukum, and somewhere ya'murkum for ya'murukum (Shinqīṭī, ii, 81). Similar phenomena, ascribed to Tamīm dialect, also occur with other liquids: yu'allimhum and yal'anhum (Ibn Jinnī, Muḥtasab, p. 23).

Chapter 9

HIJAZ: INTRODUCTION

a Naturally enough, we are better informed about the Hijaz dialect than about any other. Not only does the information of our sources flow more richly, but we possess some texts which, though not written in Hijaz dialect, yet exhibit some traits of it. There is some danger in this very plenty. We may be inclined to take any peculiarity of a Hijazi text, whether it is due to bad copying or great age, as a glimpse of the dialect, and the ancient philologists were just as prone to this error. The population of Hijaz changed considerably in the first centuries of Islam; the old dialect probably became extinct in the cities and was replaced by a mixed colloquial similar to that spoken in our days. No doubt the philologists often record the speech of their contemporaries at Mecca or Medina as Hijaz dialect. It may be that the impression we get of the Hijaz dialect as tending in many respects towards the East rather than towards West-Arabian is due to this kind of information and does not apply to the language the Propbet spoke. We are gravely bindered by the almost complete lack of information about the present-day rural speech of Hijaz, which may have preserved features of the old dialect.

b The word hijax 'barrier' was at first applicable to any part of the belt between the coastal plain, or Tibama, and the uplands, or Najd. In practice it meant the hijāz-country around Medina (cf. Lammens, L'Arabie occid., p. 300). The statement of 'Asma'i (in Yāqūt, Mu'jam, ii, 205), presumably based on the usage of pre-Islamic poetry, may be considered typical for pre-Imperial tradition. He excludes the coastal plain, but extends the country into the interior to include the territories of Sulaim, Hilal, and part of Hawazin. The northern boundary runs from the point where the boundary between the tribes of Khuzā'a and Juhaina leaves the coastal plain, to Sbaghab and Badan, two places in the territory of Balī south of Teimā (cf. Hamdani, Jazira, p. 170). In Imperial times the province of Hijaz included Mecca, Tā'if, and the rest of the Tihāma as far south as the confines of Hudbail (cf. Nöldeke, Beiträge, p. 11; Lammens, op. cit., p. 302). In view of the constant parallelism between lughat Quraish and lughat 'ahl al-Hijāz it is clear that the philologists used the name in this later sense.1 The bedouin tribes of the interior were sometimes included in the Hijaz and at other times among the Qais.

c Qāsim b. Ma'n is quoted in the Ṣaḥāḥ (i, 33) as saying that the dialects of Mecca and Medina were identical except for the word $t\bar{a}b\bar{u}t$ 'ark', which at Medina was pronounced $t\bar{a}b\bar{u}h$ (cf. § 10 v). Schwarz (Umar, iv, 95, note 2) rejects this statement as worthless because it refers to the pronunciation of

a foreign word; but this is just the point of Qāsim's observation: in all essentials there was complete agreement. Actually Medina alone is mentioned several times in connection with dialect data. Qāsim's statement fits in too well with the tendency of later times to identify the Hijaz dialect with Classical Arabic (cf. § 3 m seq.). Of course he meant his words to apply only to the usage with regard to Koran reading or religious terms.

d In fact the difference between Mecca and Medina must have been considerable. Morcover both, having been seized by their inhabitants only shortly before Islam, must to some extent have been foreign bodies in their linguistic environment. The term lughat 'ahl al-Ḥijāz hides all this from us. The frequent mention of the Kinana dialect with regard to peculiarities of the Koran may give us some pointers to the idiom of Mecca. For Medina, similar material seems to be contained in data given under the heading of al-'Aliva. This may at first have been identical with 'awali l-madinati, a group of villages situated 4-8 miles from Medina towards Najd (Qastallānī, iv, 271; Lisan, xix, 320). There was a group of Hawazin clans near Medina, including the Sa'd b. Bakr, Jusbam b. Bakr, and Nasr b. Mu'awiya, which were called 'a'jāz Hawāzin 'tail-end of the Hawāzin' or 'ulyā Hawāzin 'upper Hawazin' (Tabari, Tafsir, i, 23). We may perhaps render the last term more freely as 'Hawazin of the 'Aliya'. For Jauhari (Sahah, ii, 521), Ibn Duraid (Ishtiqāq, p. 34), and Yāqūt (Mu'jam, iii, 593) the 'Āliya was synonymous with the old Hijaz as described by 'Aşma'î (§ b). 'Azharî (in Lisān, xix, 320) describes the 'āliyat al-Ḥijāz as a spacious country, which includes the Harrat Laila (in the territory of Dhubyan; Yaqut, ii, 250), the Harrat Shauran (near 'Aqiq; Yaqut, ii, 249) and the Harrat Sulaim (ibid.). Vollers (Volkssprache, p. 6) similarly defines the region as the triangle Medina-Khaibar-Oneiza, i.e., the country south of Wadi Rumma. Still wider is the definition of 'Abū 'Alī (quoted Yāqūt, loc. cit.), who says that it covers 'all the country beyond Wadi Rumma towards Mecca, including the tribes 'Ukl, Taim, part of Dabba, all 'Amir, Bāhila, part of 'Asad, and 'Abdallah b. Ghatafan', i.e., South-western Nejd. For Mubarrad (Kämil, p. 16) the term simply covers 'the Quraish and their neighbours', i.c., Imperial Hijaz. It is strange that such early scholars were so vague about the meaning of the term. We cannot go far wrong, in any event, if we take it as equivalent to northern Hijaz.2

e In the course of his statement about the hamza (Lisān, i, 14) 'Abū Zaid (d. 214/829) appears to draw a distinction between the speech of Hijaz and that of Mecca and Medina, when he enumerates 'the people of Hijaz, Hudbail, and the people of Mecca and Medina'. Perhaps he took here Hijaz in the sense of 'Aliyat al-Hijāz. We are hardly justified in seeing in this a distinction between the speech of the cities and that of the countryside.

f What we mainly get in our sources is, of course, the idiom of the holy cities. The urban character of the Hijaz dialect is typified by the foreign words which are given as peculiar to it, such as biṭrīq 'patricius' (Tāj, vi, 296), balās 'saddlecloth' from the Persian (Ṣaḥāḥ, i, 443; Jamhara, i, 288, iii, 500), firsik 'peach's (Jambara, iii, 338).

g The Hijazis were proud of their native speech. This is illustrated by anecdotes in which the aristocracy of Quraish are shown jealously defending it against foreign mannerisms (§ 10 h, i), and the people of Medina become agressive in the face of correct Arabic (§ 11 ll). These stories are obviously tendentious, but may well contain a grain of truth. It cannot be accidental that the Hijazi school of Koran readers often preserves Hijazi peculiarities and tries to give them a greater prestige by attributing such readings to the first Caliphs. We may have here the last echoes of the lost battle for the West-Arabian language against the rising tide of an East-Arabian Classical idiom backed up by grammarians with a veneration for bedouins and by the glory of heathen bedouin poetry.

NOTES

- A most peculiar view is expressed by some Hijazis in Lisan, ii, 332, who say that the region of al-Khabt lay 'between Medina and the Hijaz'.
- ² Koster (WZKM, xlviii, 57) calls the 'Aliya 'a region where dwelt innumerable fragments of scattered tribes', and ascribes to its language a mixed character. This is not borne out by the data.
- ³ The form represents Palestinian Jewish Aramaic pirsiqā, pirseqā, rather than Syriac parsāyā. The loanwords discussed in § 10 t-v also exhibit a form that suggests that they were taken from Palestinian rather than from Mesopotamian Aramaic.

Chapter 10

HIJAZ: THE VOWELS

a The most outstanding difference between the phonetics of the Eastern dialects and West-Arabian is that in the former vowels are changed under the influence of surrounding phonemes and of stress, while such influences are almost wholly absent from West-Arabian. The latter preserves the fuller forms found in cognate languages, such as Canaanite and Ethiopic. Classical Arabic on the whole sides more with West-Arabian in this respect than with the Eastern dialects. Since it exhibits this character in the oldest poetry, where Hijazi influence is quite unthinkable, we can only attribute the preservation of the full vowels to the archaic character of Classical Arabic, and assign to the vowel clision of the Eastern dialects a comparatively late date. In fact vowel clision in the colloquials does rarely go as far as it did, according to the grammarians, in the ancient Eastern dialects. The influence of surrounding phonemes on vowels, on the other hand, is in most colloquials more pronounced.

b In the Eastern dialects unstressed i and u were elided, thus reducing

the patterns fi'il, fu'ul to fi'l and fu'l (Sibawaihi, ii, 198), fa'il and fa'ul to fa'l (ibid. 277), the verbal forms fa'ila to fa'la (ibid.)—two examples in one line: 'Akhţal (ed. Sălhānī), 217, 17-, fa'ula to fa'la (Jeffery, R.S.O., xvi, 261), fu'ila to fu'la (Jamhara, ii, 329) or to fü'la (Ibn Mālik, Tashīl, f. 31a). The last ease shows influence of the elided vowel on the one preceding it, i.e., vowel harmony and subsequent elision. The same process produced kilma for kalima 'word' (Ibn Jinnī, Khaṣā'iṣ, i, 25), sudqa for şaduqa 'dowry' (Misbah, p. 513), and forms like fikhdh for fakhidh 'thigh' (Lisan, v, 37) and 'udd for 'adud 'elbow' (Mukhassas, i, 163)—the two last ones not considered dialect forms. All this is entirely absent from the Hijaz dialect. Often the forms with full vowels are specifically introduced as belonging to that dialect, even where both forms were current in Classical Arabic 'unuq for 'unq 'neck' (Misbāh, p. 622), dila' for dil' 'rib' (Tāj, v, 433), şaduqa (Mişbāḥ, p. 513) or şuduqa (Farra' on Koran, xiii, 7/6) for şudqa, yaumu l- jumu'ati 'Friday', where the 'Uqail said juma'ati and the Tamim jum'ati (Farra' in Orientalia, xv, 186). The Tamimi form is read here by the Kufan 'A'masb, the Hijazi form by the Hijazi readers and the Kufan 'Aşim. In some cases only the Eastern form is common in Classical Arabic, as in the case of Hijazi husun for husn 'beauty' (Baidawi, i, 70: non-canonical reading in ii, 77/83). It eannot always be said that the Hijazi form is older and the Eastern form produced by elision. As the instance of Arabic malik and Hebrew malk- proves, there was a good deal of wavering between cannot claim that the Hijaz dialect inserted vowels into forms which originally had none. Some Western poets indeed did so for the sake of the metre (Sebwarz, Umar, iv, 100 seq.), and the Meccan colloquial of to-day freely produces anaptyctic vowels of this kind (Snouck Hurgronje, Mekkanische Sprichwörter, p. 99). The same tendency may have existed in the old dialect, but we have no proof for it.

c A special case are the plurals in -āt of feminine segolates. The Eastern dialects formed these by simply attaching -āt to the stem, West-Arabian with an additional vowel. The Classical language wavers, forming fa'alāt from fa'la, but omitting the a in the ease of roots mediæ w and y, and fi'lāt, fu'lāt from fi'la and fu'la, admitting however fi'ilāt and fi'alāt, etc., as well. The Hijaz dialect had everywhere the three-syllable forms. Thus the Hijazis said mathalāt, suduqāt (Farrā' on Koran, xiii, 7/6) and ni'imāt (Liḥyānī in Lisān, xvi, 59). The two latter forms seem to have been peculiar to the Hijaz, other West-Arabian dialects saying ni'amat and sudaqāt, like Hebrew kēbhāsāth from kibhšāh and hōrābhāth from horbāh (cf. on this § 8 d).

d The absence of elision was noticed by 'Abū 'Ubaida (d. 210/825): 'The Hijazis give full weight to every sound (yufakhkhimuna l-kalama kullahu), except for 'ashra "ten" which they shorten (yajzimūnahu). The Najdis do not give full weight to sounds (yatrukuna t-tafkhima fi l-kalami) except in this one word, which they pronounce 'ashira' (quoted by Suyūtī, 'Itgan, p. 220). In syntax fakhkhama means 'to emphasize', to make the meaning quite clear (e.g., 'Astarābādī, Kāfiya comm., ii, 5). It is again applied in connection with the Hijazi dialect to the 'pure' a, unchanged by 'imāla (cf. § p).1 Obviously bere something more than the mere retention of vowels is meant, a process that is denoted by tathqui, as opposed to takhfif (Farra' on Koran, Ixii, 9, quoted Orientalia, xv, 186). There are many stages of weakening and neutralization in unstressed vowels before the vowel is completely clided. In the Hijaz dialect the unstressed short vowels were given the same sound as the stressed ones. Hijazi Arabie would thus in this respect have resembled American English, while the speech of Naid resembled King's English.

e We need not accept 'Abū 'Ubaida's view that the ease of 'ashra forms an exception to the Hijazi rule. The form he means is the one used in the feminine numbers from 11 to 19. Here the Hijazis said 'iḥdā 'ashrata, etc., the Tamim and the people of Najd in general 'iḥdā 'ashirata (Sibawaih, ii, 176; Ṣaḥāḥ, i, 364). Some Tamim said 'iḥdā 'asharata (Suyūṭī, Muzhir, ii, 175). The Hijazi is considered the better form ('Astarābādī, Kāfiya comm., ii, 150). Hebrew 'eśrēh (in Babylonian pointing 'aśrōh) and Syriae 'eṣrē prove that it was also the proto-Semitic form. The Tamimi 'ashira has therefore an anaptyctie vowel. The same is the case in Tamimi samura for Hijaz samra

'gum-acacia tree' (Ibn Duraid, Ishtiq $\bar{a}q$, p. 50), where bowever Classical Arabic has adopted the Tamimi form. It is to be noted that in both cases the anaptyctic vowel appears before r, a consonant that seems to have exercised a peculiar effect on vowels in Eastern Arabic (cf. § 12 k and the note on § 8x). In this particular case we have a parallel from Accadian. There a short vowel following upon a syllable with short vowel is normally elided, but an a before r is not (Goetze, Orientalia, xv, 233-8). It seems that it was found difficult to pronounce an r immediately after another consonant. In Mishāh, p. 1079, it is stated that in the 'Asad dialect every noun of the pattern fu'l became fu'ul, but the only examples given are 'usr 'difficulty' and nusr 'eagles', which became 'usur(un) and nusur(un). This may be merely another example of anaptyxis with r.

1 Another feature of the Eastern dialects is vowel-harmony, i.e., assimilation of unstressed short vowels to the stressed ones. In the Tamim dialect the feminine plural form fu'alā was pronounced fa'alā (Ibn Khālawaih, Badi', p. 26). The tendency is particularly strong when only a laryngal consonant (which required no adjustment of the buccal organs of articulation) intervenes, as in Tamimi ri'ī for ra'ī 'familiar spirit' (Liḥyāni in Lisān, xix, 10; Ibn Qutaiba, 'Adab, p. 401), bi'īr for ba'īr 'camel' (Tāj, iii, 52) and so generally with fa'il (Sibawaihi, ii, 274). In the 'Asad dialect fa- and wa-'and' became fi- and wi- before 'i ('Akhfash in Ibn Khalawaih, Badi', p. 17). Examples with other vowels: 'urūma for 'arūma 'origin' (Mufaddaliyyāt, p. 254), haşād for hişād 'harvest' (Suyūţī, Muzhir, ii, 176).3 The only phenomenon of this kind in Classical Arabic is the assimilation of the suffixes -hū, humū, and -hunna after i or y.4 Incidentally, this is the only known case in Arabic of progressive assimilation. Even this was more radical in the Rabi'a dialects, where it worked across a consonant, as in minhimi 'from them' (Sihawaihi, ii, 321) and with -kumū as well as -humū (ibid.). In the Hijaz dialect even this modest amount of vowel harmony was absent. There one said bi-ghulāmihū, bi-ghulāmihum, etc. (Sībawaihi, ii, 321). The Hijazi readers read in Koran, xxviii, 81, bihū wabi-dārihū 'upon him and his house' (Ibn Jinnī, Muhtasab, p. 57). The Kufan Hafs (pupil of 'Aşim') seems to have read in this manner fairly consistently (Suyūți, Jame, i, 58).5 Most readers found some compromise of their own. The Kufan Ḥamza (of Taim, a tribe of the 'Aliya) did not assimilate after prepositions, but always after nouns ('Astarāhādī, Kāfiya comm., ii, 12), except when the pronoun came immediately before a hamzat al-waşl. Thus he read in xx, 9/10 qāla li-'ahlihu mkuthū. Some readers read with the third pl. -humū, others -himū; only the Basrian 'Abū 'Amr read -himi. All these readings are found in Kufic codices, where sometimes both the Hijazi and the Eastern reading are indicated by dots in different colours (Nöldeke, GQ., 1st ed., p. 328). Kisa'i (d. 189/805) beard an old man of the Hawazin use the forms without vowel harmony (Lisan, xx, 368). The insistence on his age may imply that the younger generation of the tribe used the Eastern forms.

g The influence of uvular, pharyngal, and emphatic consonants on adjoining vowels was stronger in the East than in the Hijaz dialect. Of course we have no means of discovering non-phonemic changes, such as æ to å (cf. Gairdner, Phonetics, p. 47), only those in which under the influence of such consonants a different vowel-phoneme was substituted. The Classical language again takes up a middle position, often having both the Western and the Eastern forms. It is often impossible to ascertain from the lexica which is to be considered the Classical form. I therefore give the forms in the following simply as Hijaz and Tamim, etc., assuming that the alternative forms were in each case used in the opposite dialect even where this is not expressly mentioned.

h The following cases can be observed:

In the neighbourhood of guttural or uvular consonants the Eastern dialects have an a where the Hijaz has u: Hijaz 'uqru d-dāri against Tamim 'agru 'main part of the house' ('Aşma'ī, 'Addad, p. 5; Ibn Sikkīt, 'Addad, p. 164), 'Aliya yafrughu 'he is at rest' for yafraghu (Mufaddaliyyat, p. 281; Mubarrad, Kamil, p. 16), luhd 'grave-niche' and rufgh 'armpit' against Tamim lahd, rafgh (Rāfi'ī, Tārīkh, i, 147), shuhd 'unrefined honey' against Tamim shahd (Misbāh; Tāj, ii, 392), Hijaz juhd 'effort' for jahd (Misbāh, p. 176), zuhw 'dates turning yellow' for zahw (Sahāh, ii, 490), Tamim yajnahu 'he inclines' against Qais yajnuhu (Tāj, ii, 133), Bakr bakhl 'avarice' for bukhl (Ibn Khalawaihi, Badi', p. 26). For da'f 'weakness' they said du'f 'in the language of the prophet' (Misbah, p. 176). This information is no doubt derived from a hadith in which Ibn 'Omar relates that he pronounced in Koran, xxx, 53/54 daf before the Prophet, and the latter corrected him and told him to say du'f (Baidawi, ii, 110). Only the two Kufans 'Asim and Hamza read here daf. The anecdote is interesting as it shows how the authority of the Caliphs and the Prophet himself was invoked in aid of Hijazi pronunciations. One would be inclined to take fuqr 'poverty' for faqr as Hijazi, but Laith (in Lisan, vi, 366) rejects it as lugha radi'a 'a bad dialect form' (or should we perhaps read 'azdiyya?). The people of Tihāma said 'udud 'upper arm' for 'adud and 'ujuz 'posterior' for 'ajuz ('Abū Zaid in Lisan, iv, 283). The Eastern form of 'adud was 'add (Sibawaihi, ii, 277).6 There are, bowever, also examples of the contrary relation: Hijaz za'm, inf. of za'ama 'to claim' against Tamim zu'm (Yūnus in Lisan, xv, 156; Tāj, viii, 324). Perbaps this is a case of a against i, cf. next §.

i In view of the many instances of u against a it is strange that there are almost none where Hijazi has i against Eastern a under the same circumstances. The Quraish said na im for na am 'yes', as did the Hudhail (§ 8 c)

and Kinana (§ 7 q). A man of Khath'am noticed that the Prophet said na'im, and the Caliph'Omar is reported to have insisted on this form. One of the Zubair family never heard the Quraish aristocrats use any other form than this (Lisan, xvi, 69). The Tamim used 'akhdh as inf. of 'akhadha instead of 'ikhdh (Tāj, ii, 551).7 Conversely, the Hijaz dialect had lahya for lihya 'beard' (Zamakhsharī, Kashshāf, p. 864). This is all the stranger as several cases of i against a are reported for the dialect of Najd: mhy 'rainpool' for nahy (Khizāna iii. 23; in Rāfī'ī, Tārīkh, i, 147, nihy is attributed to Tamim; in Lisan, xx, 219, it is merely said that ni/ahy means a rain-pool in Naid), hiji 'pilgraimage' for hajj (Baidāwī, i, 167; Jamhara, i, 49, with sbahid hy the Tamimi Jarir), qirri 'ainan 'be at rest' for qarri, read by some in Koran, xix, 26 according to the dialect of Najd (Baidawi, i, 579). We may add to this that the Qais dialects had zi'm where the Hijaz had za'm, inf. of za'ama-ef. preceding paragraph (Vollers, Volkssprache, p. 15, without indication of source). Vollers (ibid.) concludes from these instances that in the Najd dialect short a was subject to 'imala as much as long a, and that the i in these words represented æ or e. However, this is impossible; in each case the a is in contact with sounds that prevent 'imala, and by all analogies in Semitic phonology a might have developed out of i in these words, but never i out of a. It is also impossible to know whether the 'people of Najd' are in this ease the Qais or the Tamim. Only further data can throw some light on this eurious inconsistency in the treatment of i and u.8

k In a smaller number of cases the Hijazi dialect has i against Eastern u in the neighbourhood of uvular and emphatic consonants, in most instances combined with labials: Hijaz mishaf 'codex' against Tamim mushaf (Jamhara, ii, 369; but ibid. ii, 162 mushaf is said to be 'Aliya dialect), gidwa 'model' against Tamimi qudwa (Yazīdī, quoted by Suyūtī, Muzbir, ii, 176), Hijaz ginwan 'cluster of dates', Kalb ginyan, Qais qunwan, Tamim and Dabba qunyan (Farra' in Taj, x, 304), Kinana qibilan against Tamim qubulan 'face to face' ('Abū 'Ubaid, Risāla, p. 145-supported by the fact that the Kufans read qubulan in xviii, 53/55), Tamim sukhriyyan 'in slavery', read xxiii, 112/110 by Nafi'(1), Hamza, and Kisa'i for sikhriyyan ('Abū 'Ubaid, Risāla, p. 156), rudwān for ridwān 'goodwill' (Yūnus, quoted by Suyūtī, Muzhir, ii, 176), Hijazi qinya 'flocks' against Tamimi quntoa (ibid).8 Without the presence of uvulars or emphatics, but with gutturals: Hijazi 'idwa 'peer', 'ishwa, 'firebrand', 'iswa 'model' against Tamimi forms with u (ibid.). In the Taj (x, 236), however, 'udwa is attributed to the Quraish, 'idwa to the Qais. With labial and r: Hijaz mirya 'doubt' against Tamim murya ('Abū 'Ubaid, Ris., p. 154, Yūnus in Muzhir, ii, 176; in Koran, xi, 20/17 all canonical readers read mirya).

1 As against this, there are some instances in which the Hijaz dialect has u as against Classical a: lumā 'redness of the lips' for lamā (Ibn Sīda from

al-Ḥijrī, quoted Tāj, x, 332), summ 'poison' for samm (Yūnus in Tāj, viü, 346), cf. Hebrew and Aramaic samm-. This tendency to turn a into u near a labial is considerably more pronounced in all types of Palestinian Aramaic (cf. Dalmann, Grammatik, p. 89; Nöldeke, ZDMG, xxii, 455; id., Mandäische Gramm., p. 17) and in the Zafar colloquial in southern Ycmen (Rhodokanakis, Dhofar, ii, 94.)10 Aa in those idioma, i is not influenced by labials in the Hijaz-vide the examples cited in § k above-thus this dialect contrasts with the East not by showing a stronger influence of labials, but a weaker one. This is confirmed by the preservation of 'imm as against 'umm in the Hudhail dialect (cf. § 8 s). Actually samm 'poison' is prohably a loanword in Arahic (Frankel, Fremdwörter, p. 262), and it is not impossible that the u came in with the word from an Aramaic dialect of the Palestinian type. Note that it is the 'Aliya, the region closest to the Jewish territory in Arabia, which had this form. Other dialects may have borrowed the word from Syriac. In any event, these scanty examples give no grounds to assume, with Schwarz (Umar, iv, 101) that the dialect 'was somewhat inclined to rounding vowels'. I know of no other instance of auch a tendency. In fact, in the passive perfect of mediæ w, where the Eastern dialects kept the liprounding of \ddot{u} , the Hijaz gave it up (§ 12 t, u). The only case where the Hijaz dialect has an u which cannot be explained by the influence of surrounding sounds is dhukr for dhikr, inf. of dhakara 'to remember', quoted by Sībawaihi without comment, but said to be Hijazi by Thabit, from al-'Ahmar (quoted Tāj, iii, 227).

m The difference between the Eastern dialects and Hijazi obviously derives from a difference in rhythm.11 In the East the syllable had a more definite unity, so that its elements influenced each other, and similarly there was a force in the word which brought about the reduction and complete elision of some vowels. Eastern Arabic thus aides with languages such as English, German, and Russian. The type of accent possessed by these languages is called an expiratory or atress accent.12 In Semitic, such an accent existed in Hebrew, Aramaic; it also existed in ancient Egyptian. It is typical for certain Arabic colloquials, such as the Syrian. The opposite, non-expiratory type of accent can be heard in French, American English, Indian languages, and Amharic. To those accustomed to stress accent the first impression is that the accent of such languages is constantly shifting, since of course slight expiratory prominence is lent to syllables by factors such as emphasis and sentence rhythm. Even elision of vowels is not uncommon in some languages without expiratory stress, but it is facultative and may affect any ayllable in the word. The general acoustic impression of such languages varies. In some cases, as in French and Amharic, the mode of utterance appears to us crisp, almost staccato, in others, auch as American English, there is what we call a drawl. It cannot be aufficiently stressed that

these are merely impressionist terms: we are moving on ground that bas not been satisfactorily investigated by modern phonetics. Changes from one system of accent to the other are by no means uncommon. French still shows ample evidence of the effects of a period with strong expiratory stress, which supplanted at an earlier time the non-expiratory stress of Latin; in the English of America and England we have an instance of different systems in two closely allied dialects.

n Information about the accent of Arabic is scanty. The system according to which Arabic is stressed by European scholars (Wright, i, 27) appears to be of Syrian origin; a different system, based in a rather involved and indirect manner on the colloquial, is used in Egypt. In Koranic recitation 'nous n'avons pu remarquer un accent des mots. De temps en temps on appuie sur unc syllabe' (Mayer Lambert, JA, 1897, ii, 407). In reading literary Arabic in Morocco 'wo man hier nicht eine Art Staccato hat oder die Ultima betont, liegt der Ton durchaus auf der Paenultima' (Kampffmeyer, MSOS, xi, 2, p. 3). It may be assumed that the style of Koran recitation has preserved some traces of Hijazi pronunciation. This is further confirmed by the type of accent found in some colloquials of West-Arabian antecedents. In Zanzibar 'der Akzent trifft das Wort nur schwach und neigt dem Wortende zu' (Praetorius, ZDMG, xxxiv, 219). Similarly in the semibedouin colloquial of Palmyra 'les effets de l'accent sont peu claires, pour ne pas dire inexistants' (Cantineau, Palmyre, p 103.). Detailed investigations, conducted in conjunction with an educated Egyptian by Mr. Firth, Professor of Phonetics at London University, have, as he kindly informs me, led him to the conclusion that the Cairene colloquial has no expiratory stress, only 'grammatical prominence'. There are frequent elisions of vowels, voiceless vowels, etc., especially in the rapid speech of women, but these may affect 'stressed' and long vowels as well as 'unstressed' and sbort ones. This curious combination of non-expiratory stress and facultative elision is well characterized by Goitein in discussing the stress of Jewish Central Yemenite (Jemenica, p. xvii): 'the stress of the word is largely determined by the rhythm of the sentence and the emphasis accorded to its function within the sentence. The principal rule that can be stated is that the accent tends to withdraw as far as possible from the end of the word or the stress unit . . . The same persons say at one time hisidu, at another hsidu and on one occasion húsma and on another hsáma, or kháshaba and khshába. 13 Clearly it is not the primary shift of accent which causes the elision of vowels, but on the contrary the tendency to elide short vowels allows great latitude to vary the stress of grammatically similar forms in the interests of emphasis or sentencerhythm.' That this is not specifically Jewish Yemenite, is shown by Rossi's less detailed statement (San'a, p. 8): 'The position of the stress depends on the emphasis of the utterance, on the position of the word within the

sentence, and on the emphasis laid on the word'. The speech of the people of Zafār is 'abgehackt, ruckweise herausgestossen' (Rhodokanakis, Dhofar, ii, 67). Facultative elision of vowels is frequent (ibid. 95-6). This particular staccato quality seems to have been alien to the 'Himyaritic' speech of ancient times, which is on the contrary described as 'halting' (mu'aqqad), we should say 'drawling'. This drawling quality is also evident in the Aden colloquial. A significant description of this latter type of rhythm in the colloquial of Haurān is given by J. Cantineau: 'il s'agit d'un accent faible, un peu traînant, dont la place n'est pas toujours facile à discerner—d'autant moins que cette place est parfois sujette à hésitation pour les sujets parlants eux-mêmes'. (Horan, p. 184; more detailed description ibid. p. 190). Yet the Haurān colloquial has lost unstressed i and u, and in many cases a, and is in this respect similar to the neighbouring bedouin dialects which possess a strong expiratory stress (Cantineau, Parlers, i, 67). This situation seems to indicate language mixture in the past.

o This drawl seems to be meant by the term ghamghamat Quraish (Taj, ix, 6). Mubarrad (Kāmil, p. 364) explains this as 'a manner of speech in which the sounds are not clear'. In a line by the Hudhali 'Abd Manaf b. Raba^c (Lisan, xv, 341) it is used to describe the mumbling of a Christian priest in prayer. No doubt it is connected with Mishnaic Hebrew gamgem, as in měghamgem we-gore' (Bab. Talm., Berakhoth, 22 b) 'he reads rapidly, without pronouncing distinctly'. It is possible that in West-Arabian the consonants were not articulated with the same vigour as in Eastern Arabic, but the description may as well apply to a type of rhythm lacking characteristic peaks and valleys. In the story of the various Arabic dialects (§ 3 1) the Kāmil and the Lisan ascribe the ghamghama to Quda'a, in accordance with the tendency to glorify the speech of Mecca. The speech of the Quda'a seems to have been distinguished by a quality called 'aj'aja. This is identified ('Ushmuni, iv, 211) with the peculiarity that -'i became -'ij, but that sound-change is elsewhere attributed to Tayyi', and may be altogether mythical (cf. § 14 m). The verb 'ajja means 'to low' and the verb 'aj'aja is a synonym of ghamghama as applied to bovines. It is, therefore, very likely that we have here another name for the same drawl, which thus would not be restricted to West-Arabian dialects. The same inference may be drawn from the term tadajju', applied to the dialect of Qais (Ibn Jinnī, Khaṣā'iṣ, i, 411), which appears to mean something like 'sloth, laziness of utterance', i.e., again some form of drawl. The 'ajrafiyyat Dabba (ibid.) perhaps belongs to a different kind of phonetic description. It is explained by Ibn Sīda (Lisān, xi, 139) as taqa"ur, a term which denoted an affected, drawling manner of speaking (cf. Dozy, JA, 1869, ii, 172-3).

p It seems thus pretty well established that West-Arabian did not possess an expiratory stress. This characteristic has come down to the colloquials

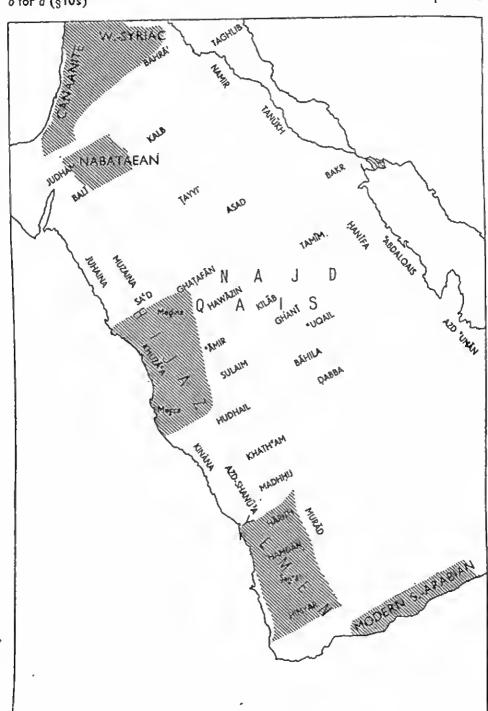

now spoken on old West-Arabian territory and to some colloquials outside Arabia which are connected with West-Arabian, but as the instance of Maghrihine Arabic shows, not to all. Classical Arabic sides with West-Arabian where effects of accent are concerned, we may therefore assume that the dialects on which it was based did not have expiratory stress either. The Eastern dialects in which we find such a powerful stress accent must have acquired it comparatively late. The investigation of the reasons for this change of rhythmic behaviour may throw some light on the background of those dialects. It may be pointed out that both in the case of French and Teutonic, linguistic mixture has been suggested as the cause of similar changes.

q Classical Arahic long a represents three proto-Semitic vowels: *a (Aramaic a, Hebrew o), *e (Hehrew e), and in the final position *-ai (Hebrew -ai, -eh; Ethiopic -ē). In the Hijaz dialect these were still distinguished. The old a was not, as in the East, 'inclined' towards a or e (Sībawaihi, ii, 279, 282). The representatives of Hijazi tradition supported their usage by a 'hadith': 'the Koran was revealed with tafkhīm' (Suyūţī, Itqan, p. 220). Actually, it was not one of the Hijazis, but the Kufan 'Asim who was most consistent in reading pure a, while the extreme tendency to 'imala is ascribed to his fellow townsman Hamza, of the Western tribe of Taim (Ibn Ya'ish, p. 1252). 18 The Hijazi ā is described in the sources as 'the pure sounding of the 'alif' (Dani, quoted Suyūţi, 'Itqan, p. 216), or as tafkhim or fakhāma (Lisān xx. 365). We have seen that tafkhim means no more than clear, distinct, enunciation (cf. § d above). Dānī (loc. cit.) distinguishes the intermediate tafkhīm (t. mutawassit) and the extreme form (t. shadīd). Tazarī describes the latter as the kind of ā which is heard in Persia, particularly in Khurasan, i.e., phonetic ō (Jazari, Nashr, ii, 29). According to him, it was not permissible in Koranic recitation. But there was one case when the tafkhim shadid, or as Makki (Nibāya, p. 31) calls it, 'alif at-tafkhim, was not only permissible, but was indicated in old codices by writing wāw instead of 'alif. This was the suffix-less form of feminine nouns ending in ordinary Arabic spelling in 'alif+tā' marbūta. Since Arabic words are spelled as if in absolute pause, 16 where the t disappeared, the vowel indicated by w was final and stressed. The list of nouns thus spelled includes all nouns with ā before the feminine ending found in the Koran: salāh17 'prayer,' hayāh 'life', zakāh 'alms', najāh 'deliverance', ghadāh 'morning', mishkāh 'lamp-niche', manāh 'the goddess Manāt'. To these must be added ar-ribā (written الربوا 'usury'. 18 All of these have wāw (مالوبوا etc.) in most old codices, and in works on the spelling of the Koran, but in some Kufic codices are written with 'alif (GQ, iii, 41) and are normally written so in later Arabic. The accounts of the tajwid works leave no doubt that the final syllable of these words was pronounced as an o, not as au. Makki (loc. cit.)

says it was a sound between \bar{a} and \bar{u} , and compares it with \bar{a} in eontaet with emphatic consonants, i.e., roughly the English vowel in what (cf. Gairdner, Phonetics, p. 42). There is no reason to think that other words of the same time, such as ghazāh, rajāh, would have been treated differently had they occurred in the Koran (this is the view of Barth, Nominalbildung, p. 409). Since some of the words enumerated are Arabie, we cannot argue that the \bar{o} represents a foreign sound in şalāh, zakāh, hayāh, and mishkāh (from Aramaie şēlōthā, zākhūthā, ḥayūthā, 19 and Ethiopic maskōt²o respectively), especially as in non-Koranic Arabie all these words are treated exactly alike. The Kufan Kisā'ī read mishkāh with 'imāla (Baidāwī, ii, 23) and Zamakhsharī prescribes 'imāla for ar-ribā (Mufaṣṣal p. 160). In the spelling of the Koran, 'alif, not wāw is written when the words receive any suffixes: we may assume that the \bar{a} was then pronounced less like an \bar{o} .

r It remains to be discussed in what relation this \bar{o} stood to the \bar{a} phoneme. The native words of this type are from roots tertiæ w. Bravmann Orientalia, ix, 51) maintains that they were of the pattern fa'wa, and that -wa became sometimes -o, and sometimes remained, as in Koranic najwa 'high place'. But that means importing an unnecessary measure of phonetic anarchy. Moreover, we should expect to find instances of fu'āh and fi'āh, since fu'wa and fi'wa are so frequent. Finally, if wa became o, we should expect it to have become the same when before suffixes, or else to have remained wa in that position. We must, therefore, keep to the old view which saw in these nouns original fa'awa forms (Barth, loc. cit.; Brockelmann, GVG, i, 349). No fa'awa nouns exist in Arabic: the triphthong was in all positions reduced to a, in the Hijaz dialect as elsewhere. An exact parallel to this is the Southern English 'par' for power. There was no separate ophoneme in the Hijaz dialect. The spelling with waw merely represents a position-variety of the a-phoneme (namely, stressed and final) in which it sounded more u-like than in any other position. By chance this coincides with eases in which \bar{a} was developed from older awa. If \bar{a} sounded like \bar{o} in this particularly prominent position, it must have been essentially a backvowel, like in English father. Probably it inclined towards δ , though less than in the final position, also in non-final stressed syllables. A confirmation of this comes from a statement of Ibn Manzur (d. 711/1311)21 in the Lisan (xv, 347): 'Tafkhīm in letters is the opposite of 'imāla. 'Alif at-tafkhīm is the sound between ā and ū, which one sometimes hears in salomun 'alaikum and qoma zaidun. This is why salāh, zakāh, and hayāh are written with waw, because the \bar{a} in these words inclines towards \bar{u} .' Perhaps Ibn Manzur describes here a usage of his own time, such as that of Koran readers. Or should he, who was qādī at Tripolis in North Africa, have heard such pronunciations in colloquials similar to that of rural Malta (cf. Brockelmann, GVG, i, 142)?

8 The ō-like character of ā in some modern South-Arabian languages and its possible connections with West-Arabian have been discussed in § 4 e. To the north, we have the well-known change of stressed \bar{a} to \bar{o} in the Canaanite of Tell el-Amarna, in Hebrew, and in Phoenician (cf. Bergsträsser, Hebr. Gramm., i, 143), the pronunciation of ā as ō in Western Syriac, and the change of tone-lengthened a into o in the Hebrew reading-style of Northern Palestine between A.D. 100 and A.D. 350 (ibid., p. 59).22 The same shift occurred in Egyptian (cf. Sethe, ZDMG, lxxvii, 167; Gardiner, Grammar, p. 427).23 For early North-Western Arabic the pronunciation of \bar{a} as \bar{o} is proved by the fact that in a number of Palestinian and Syrian names foreign o is rendered by Arabic a (to the list in Fraenkel, Fremdwörter, p. xvii, add Sulaimān = Syriac shēlēmon). The foreign o was identified by the local Arabic speakers with their own stressed $\bar{a} = \bar{v}$; other Arabs, knowing that the \bar{o} of that dialect corresponded to their own \bar{a} , then substituted the latter. Long ā is still pronounced as ō in some parts of northern Palestine (Bergsträsser, Sprachatlas, p. 22) and in the north-Syrian mountains (Littmann, Volkspoesie, p. 8). As the Arab population of these countries has changed considerably since early Islamic times through immigration from the desert, that pronunciation is likely to have been much more widespread in earlier centuries. One might seriously consider whether the late Hebrew and Syriac sound-changes mentioned above were not due to the influence of the steadily increasing Arab population. The beginnings of Edessa, as is well known, were closely bound up with Arab elements. Nearer to the Hijaz, we have the frequent spellings with waw where a would be expected in the Nabataean inscriptions, both in Arabic names and in purely Aramaic words (Cantineau, Le Nabatéen, i, 48), which go far beyond the occasional appearances of o for a (especially before n) in other Western Aramaic dialects (Dalmann, Gramm., p. 89, 175). Guidi (Revue Biblique N.S., vii, 425) identified these as reflections of the language of the Nabataean Arabs, and connected them with the Hijazi 'alif at-tafkhīm. These Arabs spoke, of course, what we should call a Proto-Arabic dialect. In the Proto-Arabic inscriptions proper, where long vowels are not written, no evidence for the sound of ā is available, but we may take freak spellings, such as Thamudic mnwt 'Manāt' (Ryckmans, Noms Propres, i, 19) and Safatene slwm = salām (Dussaud-Macler, No. 11) as proofs that the pronunciation of \bar{a} as \bar{b} was not strange to those idioms.24 To spell o with a waw was, of course, a usage due to Aramaean scribes: to the Arabic-speaking Nabataean this o was part of the ā-phoneme. Like the wāw at the end of nouns (§ 6 g) this foreign usage was imitated by Arabs writing their own language, and finally dropped as Arabic spelling came to stand on its own feet. The preservation of the inorganic wāw in the words under discussion is, perhaps, not entirely due to the peculiar sound of the \bar{a} in these words. It may go back to a period

when the employment of 'alif for expressing the long \bar{a} in the middle of a word was still unknown, and $w\bar{a}w$ was kept on as a convenient means of distinguishing $-\bar{a}h$ from the ordinary feminine ending. This is confirmed by the circumstance that, to my knowledge, no spellings such as the bave been found in codices. 25

t The Aramaic loanwords $hay\bar{a}h$, $sal\bar{a}h$, and $zak\bar{a}h$ are remarkable in another respect: that Aramaic $-\bar{u}th\bar{a}$, $-\bar{o}th\bar{a}$ is represented by $-\bar{a}h$, while its normal representation in Arabic is $-\bar{u}t$, with ordinary t and masculine gender (cf. Fleischer, Kleinere Schriften, i, 172 seq.). These words are completely arabicized, thus betraying their origin from a milieu in close contact with Aramaic speakers, presumably Medina. Perhaps they do not represent forms in $-\bar{u}tha$ at all, but the archaic status absolutus in $-\bar{u}$ (Bauer-Leander, Bibl. Aram., p. 244; Dalman, Gramm., p. 194) which may have remained alive in the speech of Hijazi Jews longer than elsewhere. Colonial dialects often preserve archaisms. A form like $zakk\bar{u}$, $sal\bar{o}$, had for the ear of the Hijazi Arab great resemblance to native words like $naj\bar{o}=naj\bar{a}h$. Another method of adapting these words to Arabic patterns, which probably also goes back to the absolute form, can be seen in $malkuwa=malak\bar{u}t$ 'kingdom' $(malkh\bar{u}th\bar{a})$ and $jabaruwwa=jabar\bar{u}t$ 'tyranny' (Syr. $gabhr\bar{u}th\bar{a}$ 'violence').

u A special problem is raised by ar-ribā 'usury'. It corresponds neither to Jewish Aramaic ribbīthā, Syriac rēbhīthā, nor to Syriac rēbhāyā, and differs from the other forms under discussion by not having the feminine ending. Qasṭallānī (iv, 26) says that some said rimā' for ribā. Should there have been a confusion in Arabic between *ribī from ribbīthā 'usury' and *ramāh from ramyūthā 'swindle'? This would, perhaps, also account for the wide application of ribā in Arabic, where it denotes every kind of unlawful sale (Ibn Ḥajar, Fatḥ al-Bārī, iv, 217).

v Our results permit us to account for the alleged Medinean of tābūt 'ark, box' (Qāsim b. Ma'n in Ṣaḥāḥ, i, 33; Ibn Jinnī, Muḥtasab, p. 25; Ibn Khālawaihi, Badī', p. 15), which Nöldeke (GQ, lst ed., p. 211) called 'an atrocious monstrosity'. That it would indeed be if we try to derive it from Ethiopic tābōt. But that word, like the Arabic, comes from Jewish Palestinian Aramaic tēbhūthā, tēbhōthā, itself a derivative of Hebrew tēbhāh. The passage of ē into Arabic ā can hardly be explained other than on the assumption that the word passed first through the Hijaz dialect (cf. § x, seq.). In Medina, tēbhūthā became, according to rule, tābāh, written as always with a wāw. In Mecca, meanwhile, the same word had been taken over in the more 'modern' form tābūt, which was, according to Ibn Mujāhid (in Lisān, i, 227) used by everyone else (qirā'at an-nās), and was enforced by the Meccan members of the 'Koran Commission' against the resistance of

Zaid b. Thābit (GQ, ii, 57). Later Arab scholars, seeing the Medinean form only in writing, failed to connect it with the well-known forms like şalāh. Ethiopic, then, must have received the word somehow via West-Arabian, through channels as yet unknown to us. That tēbhūthā was known to Medinean Jews seems to be confirmed by the occurrence of Tābūt as name of a Hijazi Jew in Ibn Hishām (p. 389; cf. Horovitz, Koranische Untersuchungen, p. 157).

w Lastly, the nouns we have discussed may give us a clue to the spelling le for -a'u, found in old codices (GQ, iii, 47). Bergsträsser (ibid.) proposes that this stands for |, the waw being a glide for the hamza (cf. § 11 bb), i.e., -āwu < ā'u and the second 'alif an 'alif al-wiqāya (Wright, i, 11). This runs counter to the normal procedure of Koranic spelling of writing words as they appear in pause. In that position -ā'u would become -ā (since the hamza was elided in Hijaz), which could well be written with a wāw. We should thus read فعفوا as du'afō=du'afā('u) 'weak ones', انبوا as 'anbō='anbā('u) 'news', etc. (cf. Vollers, Volkssprache, p. 103). The 'alif after the waw is either 'alif al-wiqāya or a reminiscence of etymological hamza. On the assumption that the $-\bar{a}'u$ class had more or less coincided with the $-\bar{a}$ (- $\bar{a}h$) types we can account for spellings before suffixes such as 'auliyāhum = 'auliva'uhum 'their associates' (GQ, iii, 46). The spelling used in Kufic codices, of (cf. ibid., p. 47, n. 1) may be an attempt to represent the Eastern context-form -a'u (il-), but the spelling used throughout mediæval Arabic, el (where the hamza sign is, of course, a later addition) bears witness to our suggested reading of the Hijazi form first mentioned, to which it stands in to صلاة to صلاة.

x There is some evidence that Proto-Semitic possessed besides the three vowels of Arabic a further long vowel, £. The question of the existence of such a sound has been the subject of violent discussion between Barth and Fischer (cf. references in Sarauw, ZAss., xxi, 35-6). Some outstanding modern authorities, such as Bauer-Leander (Histor. Gramm., p. 392) and most recently F. R. Blake (JAOS, lxv, 111) deny it emphatically. Others accept it somewhat half-heartedly. Thus Brockelmann (GVG, i, 141) admits that £ existed, but does not apply it in the discussion of the very phenomena which led others to postulate such a phoneme. Bergsträsser (Hebr. Gramm., ii, 144) explains the intransitive hollow roots with the help of Proto-Semitic £, but does not discuss the £ among the Proto-Semitic vowels. On the whole the evidence tends towards confirming that Proto-Semitic possessed an £. There is nothing inherently improbable about a system which possesses more long vowels than short ones. As opposed to the triangular system of Classical Arabic long vowels:

that of Proto-Semitic was quadrangular.

ē ā ī ū

It is clear that in such a system \bar{a} was a back-vowel, and that thus the Hijazi-Canaanite o-like sound of a proves to be inherited from the common speech. We must further assume, on the basis of phonological parallelism, that as \bar{a} was sounded closer (more like \bar{b}) in stressed open syllables, and as pure open \vec{a} in other positions, so \vec{e} was only sounded as \vec{e} in open stressed syllables, otherwise as w. It was this fact that caused it ultimately to coincide with ā in Eastern Arabic into a phoneme with a range that varied from ē in the neighbourhood of i or y, via \bar{x} and \bar{a} , to \bar{v} in the neighbourhood of emphatics. The difficulty about this Proto-Semitic ē is that so far it has been traced only in forms of roots mediæ and tertiæ infirmæ and as a feminine ending; moreover it is rather difficult to separate it from the $\tilde{\epsilon}$ which arose in different languages through a variety of phonetic causes out of old i, a, and ai. Only West-Arabian possesses, as far as we know, no such e-phoneme of secondary origin. If, therefore, it could be proved that a separate e-phoneme existed here, this would be a weighty argument in favour of those who consider the sound Proto-Semitic.

y In the East the ā of the third person perfect of hollow verbs was not affected by 'imāla. 'Imāla, even where it was demanded by the phonetic surroundings, was prevented whenever the a was in contact with an emphatic or uvular consonant (Sibawaihi, ii, 285). In the Hijaz, there was no 'imāla in any case (ibid., p. 279, 284, and § q). Yet just in the Hijaz some hollow verbs were pronounced with 'imāla', though several of them had as radicals emphatics or uvulars: hēba, khēfa 'he feared', tēba 'he was good', ṣēra 'he arrived', and mēta 'he died'. One 'Abū 'Ishāq (perhaps the Kufan Koran Reader 'Amr b. 'Abdallāh as-Sabī'i, d. 132/750) heard the Hijazi poet Kuthayyir 'Azzata (d. 105/723) pronounce sāra as sēra. Only some Hijazis used these forms; perhaps the story of Kuthayvir allows us to infer that only older people spoke thus (Sîbawaihi, ii, 281). The Kufan Hamza read full 'imāla $(=\bar{e})$ and the Medinean Nāfi' 'imālat baina baina $(=\bar{x})$ in the following ten verbs: khēfa, tēba, jē'a 'he came', shē'a 'he wished', zēda 'he increased', rēna 'he overcame', khēba 'he failed', hēqa 'he encompassed', dēga 'it was narrow', zēgha 'he turned aside' (GQ, iii, 198). Of Sībawaih's other verbs, haba and sara do not occur in the Koran in relevant forms; the omission of māta from Hamza's list is striking. Other Kufan and Damascene readers read only some of these verbs with 'imāla, while the remaining readers from the Hijaz pronounced all of them with pure ā (cf. Pretzl, Islamica, vi, 322). Farra' is quoted by Ibn Ya'isb as saying (p. 1252): 'The people of the Hijaz have fatha in verbs such as sha'a, khāfa, ja'a, and kāda, and in verbs mediæ wāw or yā'. He further says; and the majority of the

people of Najd, namely Tamim, 'Asad, and Qais, prefer (yasrūna 'ilā') kasra in the verbs mediæ y and in those mentioned, but fatha in verbs mediæ w, such as qāla and jāla'. This author, who is generally well informed on dialect matters, thus says the exact opposite of Sibawaihi. Since this statement contradiets also all we know about Eastern 'imala from other sources, one suspects that some copyist, knowing of the connection of 'imāla with Tamim, simply transposed the dialect references. That the existence of two diametrically opposed kinds of 'imāla produced some malaise, we ean read between the lines of the pronouncement of 'Anbari ('Asrar al-'arabiyya, p. 160, quoted by Fischer, ZDMG, lix, 667): 'The 'imāla is peculiar to the people of Hijaz and their neighbours of Tamim and others'. Koranie "imāla" was a difficulty for Koran readers, accustomed as they were to Eastern assimilation 'imāla. 'Abū Ḥātim as Sijistānī (d. 250/864; quoted Suyūţī, 'Itqān, p. 215) informs us that 'the Kufans use as their guidance for 'imāla the yā's which they find in the codices in place of 'alifs. They thus follow the spelling and read 'imāla to fit in with those eases of yā''. This refers of eourse particularly to 'alif maqsūra (which in the Hijaz was in any case -ai, ef. § bb), but throws some light on the uncertainty readers felt on this point. This was no doubt the reason why Hijazi readers made no attempt to read the 'Hijazi 'imāla'. Irregular spellings with yā' to indicate the Hijazi ē did exist. Sijistānī found jā'a spelled with medial yā' in Mecean codices. 'Asim al-Jahdarī (d. 128/746) reports that tāba was spelled with ya" in 'Othman's model eodex (GQ, iii, 40), and it can be seen spelled this way in the Kufie eodex of Samarqand (Jeffery, JAOS, lxii, 186). Sībawaihi (ii, 398) informs us that in an unspecified dialect hada 'he almost was' and zāla 'he eeased' were pronounced with kasra, as if they were spelled with yā' instead of 'alif. Vollers (Volksspraehe, p. 102) takes these as further instances of e-verbs, while Sarauw (ZAss., xxi, 41) insists that Sibawaihi means that they were pronounced kīda, zīla, comparing them with Aramaie mīth = Arabie māta (Hijazi mēta, Hebrew mēth) and Biblieal Aramaie rim 'was high'. But the Babylonian Massora writes rēm, and in Jewish Palestinian Aramaic the fem. of mith is methath (Dalmann, Gramm., p. 315). These forms with i are, therefore, purely Aramaie developments (cf. also Nöldeke, Neue Beitr., p. 209), and there is no reason to reject Vollers' view of the Arabie forms. In Arabie grammatical terminology yar was used with the meaning of 'imāla, cf. e.g., Suyūṭī ('Itqān, p. 220): 'the 'alif and the yā' are considered equally admissible in Koran recitation, meaning by 'alif and ya' respectively tafkhīm and 'imāla'. Similarly Ḥamza and Kisā'ī read in lxxxiii, 14, for rāna 'he overeame' vy 'with 'imāla'; i.e., the yā' denotes an ē here (Baidawi). The use of kasra for 'imala appears in the statement of Farra' quoted above. Spellings with y occur-partly in the same verbs as those mentioned above—in the Safatene inscriptions, e.g., byt 'he spent the

night' (cf. Colloquial Arabic yabāt); syr 'he travelled', syd 'he hunted', myt 'he died' (cf. the discussion in Littmann, Safat. Inscr., p. xvii-xviii).26 What exactly they mean in a script that does not normally express long medial vowels, is difficult to say-perhaps the ē was diphthongized into ai-but whatever the Safatene sound was, it points to an earlier \bar{e} in these verbs. The reason why this spelling with $y\vec{a}$ in the Hijaz, which may have come in as an Aramaic writing habit, never appears to have taken proper hold in the orthography, may be sought in the consciousness of the speakers that ē was parallel to the a-phoneme, not one of the class of narrow vowels comprising \bar{i} and \bar{u} . It may also he sought in another factor: the way in which Sībawaihi states the matter, the exceptional course of adducing the pronunciation of a named person, and the confusion in the treatment of \bar{e} by the Koran-readers —all indicate that the distinction between \bar{e} and \bar{a} was maintained only by a narrow minority of speakers, perhaps the older generation, or the population of certain districts. Elsewhere in the Hijaz it was receding before the Eastern usage, which represented both by a single phoneme.

z It appears thus to be definitely established that Hijazi (and with it presumably other West-Arabian dialects) possessed a separate ē-phoneme. This does not necessarily mean that this phoneme was inherited from Proto-Semitic. Brockelmann (GVG, i, 608) argues that khēfa was formed in analogy to khiftu, which latter form, true to bis triliteral bypothesis, he explains as contraction of *khawiftu. This is for him all the easier as the only evidence he quotes is the statement of Farra' (see above) where the &-forms are attributed to dialects possessing 'imāla. Even there, however, such a process is most improbable, since it would imply that imalized ā was felt to be a separate phoneme, somehow related to \bar{i} as \bar{a} was to \bar{u} —but the whole point about Eastern 'imāla is that it was a combinatory variant of the āphoneme. For the Hijaz any argument based on 'imala cannot apply. On the other hand, if there were an independent &-phoneme in the Hijaz dialect, the analogy suggested by Brockelmann could have been applied here, i.e., \vec{a} : $\vec{e} = u : i$, therefore: $zurtu : khiftu = z\tilde{a}ra : kh\bar{e}fa$. However, if there were such a purely phonetic analogy at work, it should have applied with greater force to verbs of the type lintu: yalīnu, but we hear nothing of a general rule of this kind for the mediæ y. Also, other evidence for ē in Hijazi being rather scanty, our proof for it must rest mainly on the hollow verbs; we would thus, if we accepted Brockelmann's view, introduce a circular argument. The main reason, however, for not accepting the view that & in these verbs is an internal Arabic development is the existence of similar forms in several cognate languages. We need here discuss only the cognate forms of the verbs we enumerated before. Of the fifteen verbs in question, I have not found any cognates to khāfa, shā'a, and hāba. If jā'a is connected with Hebrew gai' 'valley' (cf. Nöldeke, ZAss., xii, 3), we may note with interest that that word has the alternative forms $g\bar{e}$ and ge, which are related to it like Hehrew meth to Arabie mait, mayyit. Possibly haqa is connected with Hebrew heq 'bosom' (especially as used in the phrase 'in the bosom, in the protection'), but ef. § 8 t. To rana 'ald or bi- 'overcome' (sleep, drunkenness, etc., overcoming a person) a cognate may be found in North-West Semitie rum 'be high', from which Biblical Aramaie rem, rim is the perfect. An m is often dissimilated in the vicinity of r, though mostly into b (cf. Brockelmann, GVG, i, 226). Perhaps zāda is connected with Hebrew zēdh 'arrogant'. To zāgha, cf. Syriae zī' 'trembling'.27 Some connect sāra with Hebrew histayyārū (Josh., ix, 4) which is itself a doubtful form, and in any ease useless for discovering the vocalization of the simple stem. To daqa, compare Targumie Aramaie 'iq lī 'I am in trouble' (Ps., xxxi, 10); to tāba Syriae tebh, Biblical Aramaie të Ebh. For kāda we have only the difficult Hebrew kīdh 'perdition' (Joh, xxi, 20). Finally, māta has the best-attested cognates, Hebrew meth, Aramaie mith. The evidence is thus not really full enough, but in general seems to point to &-forms in Hehrew and Aramaic. Since these forms have given much difficulty to grammarians, who have been able to account for them only by assuming analogies of various kinds, hut quite different from those assumed in the case of Arahie, the easiest and most natural way is after all to admit identity of the Arabie and North-West Semitie forms, i.e. the existence of a Proto-Semitie &. We may imagine that originally the hollow verhs had a transitive and an intransitive form of the perfect, independently of whether they were mediæ w or mediæ y, so that there were four classes: (Ia) zāra: yazūru; (Ih) shāṭa: yashīṭu; (IIa) mēta: yamātu, (IIh) sēra : yaṣāru (?yaṣīru). In the forms with suffixes, there being no short e, class Ib-IIh had i: shittu, mittu, sirtu. Gradually, however, the difference between mediæ w and mediæ y gained in importance in all languages and overshadowed the earlier opposition. In Eastern Arabic that process was no doubt speeded up by the phonetic coalescence of δ and δ . The West-Arahian forms have, as far as I can see, nothing to do with the Ethiopie forms kona, sheta, or the South-Arabian kwn, sym, which contain a consonantic element not present in Arabic. The intransitive character of the verbs discussed here is not to be doubted. In the case of the mediæ w roots among them this is confirmed by the ā-imperfeets. Only māta is treated in Classical Arabic as a normal transitive verb, hur the perfect mittu for muttu is given as Hijaz dialect by 'Abū 'Uhaid (Ris., p. 155) and as Tayyi' dialect by Ibn Duraid (Jamhara, iii, 485), the imperfect 'amatu as Tayyi' dialect (Jamhara, ii, 29). The usage of Koran readers on this point is curiously inconsistent. Hafs 'an 'Asim reads mittu in xix, 67/66 and xix, 23, but in the second passage Ibn Kathīr, 'Ahū 'Amr, Ibn 'Āmir, and 'Abū Bakr., i.e., partly the very upholders of Hijazi tradition, read muttu. In iii, 151-2/157-8 Hafs reads twice muttum, though Nafi', Hamza, and Kisa'i read mittum, yet

in xxiii, 37/35 Ḥafş himself reads mittum. Elsewhere Ḥafş has i. Apparently no reader read consistently u in the perfect of $m\bar{a}ta$.

aa There is some evidence that \tilde{e} , corresponding to Hebrew \tilde{e} , occurred also in nouns. The Yemenite dialect had "imāla" in nār 'fire' (Lisān, vii, 101), i.c. pronounced it nër, like Hebrew nër 'light'. In connection with the problem of zyl, etc. (§ y above) it is instructive to see that in the ensuing discussion it is assumed as a matter of course that this pronunciation would he noted أبير, thus giving rise to a graphic confusion with أبير, thus giving rise to a graphic confusion with birr 'well'. I have so far found no statement that jar 'client' was anywhere pronounced jer, (cf. Hebrew ger) but the inadmissibility of the argumentum e silentio is proved by the fact that the Yemenite pronunciation of nar is mentioned only apropos of a difficult hadith. Vollers (Volkssprache, p. 20) saw another instance of ē in the statement of Suyūtī (Muzhir, ii, 176) that qar 'pitch' was pronouoced qir in Hijaz. He proposed to read qer. The word is, however, horrowed (Fraenkel, Fremdwörter, p. 150), and the probable sources, Syriac qīrā and Hebrew qīr 'wall' show ī, not ē, and most likely derive from Sumerian gir (cf. Landersdorfer, Sum. Sprachgut, p. 44). The Eastern qur is difficult to explain. Possibly there was some confusion with a borrowing from Palestinian Jewish Aramaic qērā 'wax', itself from Greek këros. The Eastern form appears in the name of the river Dhū Qār, in the territory of Bakr b. Wā'il. Origioal ē was also preserved in the demonstrative pronoun dha, which according to Sibawaihi (ii, 289) was in some unspecified dialect pronounced with 'imāla, i.e., dhē. This, as Barth has shown (Pronominalbildung, p. 104) was the Proto-Semitic form. Sībawaihi states that those who said dhe also said yadribe for yadribe 'the two of them strike' (cf. & cc below). In view of the occurrence of dhe in colloquials of a Yemenite stamp (Dathīna, Zafār, 'Omān), it appears that the form must be claimed as Western. The so-called otiose Hijazi dhī (cf. § 12 e) may represent dhē.

bb As is well koown, final long a is often indicated in Arabic spelling by a $y\bar{a}$ ' (in the following paragraphs written \ddot{a}). In the Arabic taught in Abbasid schools the two kinds of final \bar{a} were not distinguished in any way (cf. Fischer, ZDMG, lix, 665). Kufic Koran codices often write 'alif instead of this $y\bar{a}$ ' (GQ, iii, 39). ²⁸ Early Christian MSS. completely confuse the two endings (Graf, Sprachgebrauch, p. 8) and in the colloquials they have coincided with each other and with old $-\bar{a}$ 'u. Even the rich terminology of Arabic grammar does not provide a separate name for the $-\bar{a}$ spelled with $y\bar{a}$ ', but calls it 'alif maqsūra, like the one written with 'alif (Wright, i, 11B). Fischer (loc. cit., 666) claims that the two types of \bar{a} rhyme freely in poetry. This needs some qualification. In two of his three instances (ar-Rā'ī an-Numairī, Ḥamāsa, p. 660 and a man of Sulaim, 'Aghānī, xvi, 137) 'alif maqsūra of both types also rhymes with 'alif mamdūda, thus presupposing a pronunciation quite different from Early Classical Arabic. A survey of

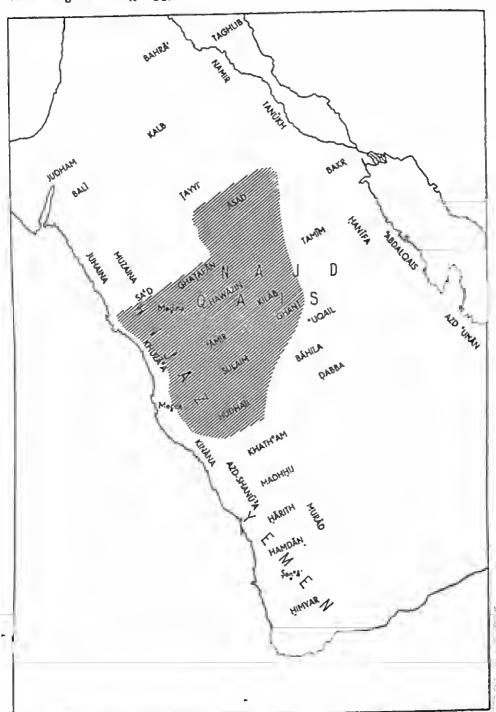

Farazdaq, Jarir, and the six poets reveals that 'alif maqsūra never occurs as sila, only once (Jarir, ed. Ṣāwi, i) as rāwi (against the rule in Wright, ii, 352), but frequently as ridf before -ni and -hā. In all cases where they occur the two kinds of \bar{a} rhyme freely, both in Eastern and Western poets. In the Koran both kinds of a are frequent in rhymes, but with very rare exceptions do not rhyme with each other (GQ, iii, 37). They rarely rhyme in the poetry of 'Omar b. 'Abī Rabī'a (Schwarz, Umar, iv, 102). In official Koranic orthography the two are meticulously kept apart, not only when final, but contrary to later usage also before suffixes, except that 'alif is written for ya' occasionally before 'alif al-wayl and regularly after another ya', the only exceptions from this being the name Yahya and suqyahā 'her watering' (xci, 13) which rhymes with other words in -ähā. It is obvious that in Ilijaz -d was sounded differently from -a. Brockelmann (GVG, i, 619) and Bergsträsser (GQ, iii, 37) assume that it was & or &. This offers some difficulty, since we have it on good authority that also the final $-ar{a}$ of words written with final 'alif, such as ghazā 'he raided', da'ā 'he called' and al-'ashā 'the evening'were pronounced with 'imāla in the Arabic taught in Iraq (Sībawaihi, ii, 280),29 and on the other hand official tajwid did not recognize 'imāla in either final -a or final -a (Grünert, Imale, p. 529-32), although the Kufans Hamza and Kisā'ī read - \ddot{a} with 'imāla, except in particles, and Kisā'ī also - \ddot{a} (Pretzl, Islamica, vi, 320). The pronunciation naděhu 'he called him' (iii, 33/9) is noted as a reading peculiar to Hamza and Kisā'ī (Baidāwī, i, 154).

cc The solution to our problem is to be found in the express statement of Sībawaihi (ii, 349), that in Hijaz and in some Qais dialects - ä was sounded as -ai in such words as hublai 'pregnant', 'af'ai 'adder', and the place names Ṣawarai, Qalahai, and Dafawai. In another place (ii, 314) Sīhawaihi states, without referring to the Hijaz dialect, that -d was pronounced -ai in pause. This led Sarauw (ZAss., xxi, 39) and Birkeland (Pausalformen p. 76) to consider the ya? a pausal spelling and to maintain that the context form could not bave been anything but -ē. Birkeland goes so far as to suggest that hubla originally ended in $-\bar{\epsilon}$, but this became in pause -ai on the analogy of fatai, the pausal form of fatan < *fatayun. This view has to be corrected in the light of Sībawaihi's information (ii, 349) that the Fazāra, a Central-Arabian tribe in the neighbourhood of Medina, said in pause hublai but in context حبلا. This implies that this was not the usage of Hijaz, a fact which might also bave been deduced from the preservation of ya" before suffixes in Koranic spelling. The spelling adopted by Sibawaihi also suggests that the context form of the Fazara dialect was not huble but hubla. We can now understand why the two kinds of \bar{a} rhyme as ridf even in the work of poets belonging to Western Qais tribes, such as Nabigha and 'Antara. Both seem to have been pronounced with 'imāla in certain dialects (cf. above). This

'imāla is marked by an inferior dot in Kufic manuscripts in 'annā 'where', naṣārā 'Christians', just like the combinatory 'imāla in the first syllable of kāfirīna (cf. Nöldeke, GQ, Ist ed., p. 328). That this 'imāla was not a grammarian's fancy is proved by cases like the reading 'ēsē for 'āsā 'I mourn' in vii, 91/93 (Baiḍāwī, i, 336) where the 'imāla in the first syllable is due to the influence of the second. I cannot explain this phenomenon. Perhaps the dialect pronunciation yaḍribē recorded by Sībawaihi (cf. § aa) may be taken to indicate a general 'imāla of final -ā.

dd In any case, we can accept it as proven that Central Arabian dialects had $-\bar{a}$ $(-\bar{e})$ in context and -ai in pause. The Hijazi dialect had $-\bar{a}$ through dissimilation after ya" and -d by monophthongization in closed syllables, since we may assume that the spellings with 'alif before hamzat al-waşl and nunation represent dialect usage and those with ya' a normalized spelling hased on the more frequent forms without reduction. What happened phonetically was not contraction into \tilde{e} , but loss of the *i*-element to avoid a four-moræ syllable (iltiqā' as-sākinaini). In the Central dialects the development no doubt began in the same way, but -a spread from the position before 'alif al-wast to all context-positions. In those (? Eastern) dialects which determined later usage it spread further into the pausal position. The earliest form was in any case -ai. This was also preserved to some extent in poetical and dialect Hebrew (Bauer-Leander, Histor. Gramm., p. 203, 512). while in most cases in normal Hebrew prose it was monophthongized into a vowel that was snunded as open \tilde{e} (Seghõl) when stressed, as closed \tilde{e} (Sērē) when unstressed.30 The Hijazi dialect is thus marked by conservativism in this respect. The data about the declension of 'aṣā in the Hudhail dialect (§ 8 t) and the forms qafaika = qafāka and 'ataika, if = 'atāka, in the Yemenite ditty (§ 5 i) leave little doubt that the same forms were current in all West-Arabian dialects. We have even a small amount of outside evidence for this. In Genesis Rabba, lxxxvii, I, Rabbi Levi (c. A.D. 300) is quoted as saying that in 'Arabia' a young man is called ann. This is probably to be pronounced fatayā, and is nothing but Hijazi fatai- with the Aramaic article. The Syrian writer Isaac of Antioch, in a poem describing events of c. A.D. 457 (ed. Bickell, i, 210) renders the name of the Arab goddess 'Uzza' as 'ūzai. In the Sinaitic Nabataean inscriptions, however, which are earlier than the second century A.D., the same word appears in the name עבדאלעוא 'abd al-'uzzā without the diphthongal element, thus proving that in certain dialects the monophthongization had taken place quite early. 31

ee It must be made quite clear that, unless we choose to consider Koranic orthography a realm of anarchy, every $-\ddot{a}$ in the Koran must be read -ai. The only exception is $-\ddot{a}$ before 'alif al-waşl, which is a pausal spelling and should probably always be read $-\ddot{a}$, as in the few cases where 'alif is written. The name Yahyä also was not only graphically distinct from

naḥyā 'wc livc'. 32 This is indicated by a tradition, quoted in Suyūṭī's 'Itqān (p. 215) that the Banū Sa'd, north of Medina, pronounced Yaḥyā with 'imāla, i.e., like other words ending in -ā. The implication is that the Medinese said Yaḥyai. The name itself seems to be a borrowing from a Jewish hypocoristic form such as Yōḥai.

ff The consistent application of the reading -ai for -ä in the verb leads to some unexpected results. Imperfect forms like yardai are paralleled in Hebrew by survivals in proper names such as Yahdai, Yahmai. What was the apocopate of those imperfects? I have found in the Koran only the one instance yarda-hu (xxxix, 9/7). This might be derived from yardai, by the same process of monophthongization as in § dd, or the apocopate was formed in that dialect not by phonetic reduction but on the analogy of yahni, yaghau. More difficult is the problem offered by the third sing, mase, perf. banai 'he built', which will be discussed later (§ 12 v), as its origin seems to be morphological rather than phonetic.

gg It will be noted that in West-Arabian nouns ending in -ai took before suffixes the same forms as prepositions of that form. In Classical Arabic, nouns and prepositions were treated differently. Both types of Arabic had 'ilayya, 'ilaika, but while West-Arabian also had qafayya, qafaika, Classical Arabic used the forms qafaya, qafaka. The reason for this difference is, of course, that with nouns the form without suffixes was more in the consciousness of the speaker than with prepositions.33 It would be strange if this distinction had been strictly observed even throughout the area where Classical Arabic developed. A reflection of some fluctuation may be discerned in statements such as the one that the Kufans Hamza and Kisā'i read matā, balā, 'annā with 'imāla, but had no 'imāla in ḥattā, 'ilā, 'alä, and ladä (Grünert, Imala, p. 530; Pretzl, Islamica, vi, 320). Yūsuf b. Husain al-'Astarābādī (quoted by 'Abū Ḥayyān, Minhāj, p. 242) reports on the authority of one Ibn Migsam that some inhabitants of Najd and most of the Yemenites pronounced hatta 'until' with 'imāla (cf. § 4 cc), which goes to confirm that in normal Classical Arabic it was not so pronounced.

hh On the negative side we may note the absence of \vec{u} ($y\vec{a}$) bi-ishmām ad-damma) from the Hijazi vowel-system, cf. § 12 t-u. This vowel, which existed in Central Arabic, had in the Hijaz become \vec{i} .

ii Both in Koran and Hadith, one finds frequently forms in which a long final i is shortened or sometimes clided altogether (GQ, iii, 34). Even the suffix of the first person singular could be affected by this. In the vocalization, short i is usually indicated in such cases, but the Kufans and 'Abū 'Amr (?i.c., the Basrian, of Tamimi origin) read 'akraman' he honoured me' (lxxxix, 15) and 'ahānan' he made me low' (ibid., 16), both in pause. Similar forms are frequently found in the poems of the Hijazi 'Omar b. 'Abī Rabī'a (Schwarz, Umar, iv, 98, 119; id., ZAss., xxx, 49). The whole phenomenon

is a spread of pausal forms into context. It is fully discussed by Birkeland, Pausalformen, pp. 20 seq., 68 seq., 78 seq.), whose rich collection of material need not be repeated here. Undoubtedly it is a dialect phenomenon. Zamakhshari ascribes the tendency to shorten long i in context to the Hudhail dialect (cf. § 8 x). No confirmation of a similar tendency is forthcoming from any other West-Arabian dialect.34 On the other hand Sibawaihi (ii, 328) informs us that in the dialects of Qais and 'Asad clision of final $\vec{\imath}$ and $\vec{\imath}$ was so common that many speakers elided the $-\vec{u}$ of forms like $qatul\vec{u}$ and the -i of yaqdi in context, thus producing forms remarkably like those of Syriac. It seems that this extreme weakness of long final vowels was peculiar to the Central area—with which the 'Asad dialect is often in close agreement-and that perhaps the similarity with Syriac is not mere coincidence, but points to similar tendencies in the speech of the Arab population that went into the make-up of the Edessene community. It may refer to the same dialects when Sībawaihi says (ii, 302) that some Arabs said in pause irm, ughz, ikhsh for irmi 'throw', ughzu 'raid', ikhsha 'fear'. These forms again point to the North-West, to the Hebrew jussives yibhen, yesht, etc. The situation is quite different in these Central Arahian dialects from that in the Hijaz, where -u was not affected at all. It remains very questionable whether any connection existed. The elision and reduction of -ī seems too deeply engrained in the Hijazi dialect to consider it an effect of Central-Arabian influence. Perhaps the tendency to shorten final long vowels was inherited by all dialects of Arahia, but developed more consistently in the Central area than in West-Arabian. It also worked with varying force in different grammatical contexts, as the 'i'rab-vowels were shortened and elided nearly everywhere, including -ā in the East (cf. § 6 g).

kk The Central area and the Hijaz are connected by the fact that the Qais and Hijaz dialects used in context the forms hadhih(i), tih(i) 'this' (fem.) while in the Eastern dialects the context forms were hadhi, etc., and the pausal ones hādhih, etc. The h is, of course, hā' as-saqt, a purely pausal phenomenon. It is possible that dhi and ti for the feminine demonstrative pronoun were altogether foreign to West-Arabian (cf. § 12 f). In any event they would have been pronounced in Hijaz, following the tendency to clide -ī, *hādh, etc.—cf. also the Hudhail form alladh (§ 8 y). This favoured the spread of the pausal form into context. In fact, as hadhihi is the only form that has real currency in Classical Arabic, it appears that it, and with it the phonetic tendency that engendered it, was well established in the dialects that served as basis for Classical Arabic. Perhaps the Hijaz dialect never knew any form but hādhihi, since there was none other in the dialects from which it received this type of demonstrative pronoun to replace its own $t\bar{a}$. The Eastern form is preserved in a curious reading of Koran, ii, 33/5, which represents a Tamimi version of a whole phrase: lā tigrabā hādhī sh-shijrata for lā taqrabā hādhihi sh-shajarata 'do not approach this tree' (Baiḍāwī, i, 52).

II In Hijazi pocts we frequently find -iya at the end of perfect forms being treated as one syllable. A case where nasiya 'he forgot' rhymes with - $\bar{\imath}$ shows that such forms were pronounced nas $\bar{\imath}$, bal $\bar{\imath}$ (cf. Schwarz, Umar, iv, 99). There are also comparatively frequent cases of -iya being reduced to - $\bar{\imath}$ and -uwa tn - \bar{u} in the suhjunctive. It is nowhere said that this is a dialect feature, nor do forms of this type occur in the Koran. The a of the accusative after y or w is frequently elided by poets of all tribes. It is, however, remarkable that we hear nothing in connection with Hijaz of the contraction bal \bar{a} , nas \bar{a} which existed both to the north in the Tayyi' dialect and to the snuth in Northern Yemenite, and hy its connections with Hebrew proves to be an old West-Arabian development (cf. § 14 k). This places the Hijazi forms into a different light. Perhaps one may suggest that they are due to purely grammatical analogy with the equally striking innovation banai for banā (cf. § 12 v). The form nas $\bar{\imath}$ may well be the origin of the common colloquial nisi (cf. further § 12 w). Cf., however, § 11 cc.

mm To sum up, we can represent the vowel system of the Hijaz dialect in the following figure:

SHORT			Lo	Long	
	a		ĕ	ā	
i	u		ī	\vec{u}	
		DIPHTHONGS			
		ai au			

All these were continuations of similar Proto-Semitic sounds. Long \bar{t} may in some cases stand in place of a \bar{u} of some older stage of the Arabic language. In certain circumstances (closed syllable, dissimilation) ai became \bar{d} .

nn A number of contractions of vowels appear where vowels were brought in contact through the disappearance of the glottal stop. These changes will be discussed in § 11 b seq.

NOTES

³ The term mufakhkham is to-day used for the 'emphatic' consonants. I cannot say how old this usage is, but it seems to me to be derived from the fact that the 'alif at-tafkhīm occurs regularly in the vicinity of emphatic consonants. In Iraq tafkhīm is still employed to characterize the Baghdadi's final d, which is slightly less ĕ-like than elsewhere.

⁸ Kofler (WZKM, xlviii, 260) adduces a further instance of this, without the presence of r, namely Hijazi wasma for wasima 'indigo-plant'. However, his source (Lisān, xvi, 123) says exactly the opposite: Hijazi wasa/ima (with tathqīl) and the rest wasma (with takhfīf).

³ Kofler (WZKM, xlviii, 262) takes hasād as the Hijazi form, hisād as that of the Tamim dialect, and quotes besides a number-of other cases in which the Hijazi dialect

bas $fa^*\tilde{a}l$ while that of Tamim has $fi/u^*\tilde{a}l$, mainly from Ibn Qutaibs's 'Adab al-kātib. In those sources, however, the variant forms are not ascribed to definite dialects. The Lisan does not mention dialect differences in any of these cases, except for rasas 'lead', for which it gives risas as a vulgar form.

- ⁴ Barth (Pronominalbildung p. 40) denies that this is a case of vowel-harmony, but thinks the vowel of -hi is on the analogy of proto-Semitic -hinna. This may well be so, but the fact remains that the distribution of the two sets of suffixes is governed by vowel-harmony.
 - ⁵ But not according to Dāni (cf. Pretzl, Islamica, vi 297).
- The dialects of that region may have had a tengency to replace the pattern fa'l by fu'ul. The form mijud for majd 'upland' is by 'Akhfush (Yāqūt, Mu'jam, iv, 745; Lisān, iv, 421) declared to be Hudhail dialect, by 'Aşma'l (Lisān, iv, 425) dialect of Hijsz and Hudhail. In Tāj, ii, 509 the Hudhail form is given as najud.
- 7 A Yemenite instance of the same phenomenon is qirya for qarya 'village' ('Azharl in Lisan, xx, 37), cf. Hebrew qiryah.
- * Perbaps this difference in the treatment of the two vowels is due to some inherent phonological difference between them which has also caused them to be trested differently in the final position, \hat{t} being shortened but not \vec{u} (cf. § ll).
- The alternations of w and y, and u and i in qunwa and qunwan are apparently connected. The same seems to have been the case with kulya 'kidney', in the Yemen dialect kulwa (Lisan, xx, 04), the latter being the common form in Syrian colloquials. The pronunciation kilwa, against which Ibn Sikklt (d. 243/875) warns (Lisan ibid.), is continued by Palestinian and Haurani čelwa (Cantineau, Horan, p. 115). The original opposition may have been kulwa: kilya, but to which dialects did these belong? (Cf. also § 11 k.)
- ¹⁸ In the Quda'a dialect sim 'name' became sum (Lihyānī in Lisān, xix, 126), cf. Palestinian Aramaic shum. The form seems to have been used further east, too, since the usm recorded ibid. for the dialect of 'Amr b. Tamim must go back to *sumu.
- 11 'Anîs (Lahajāt p. 56) comes from a study of consonant assimilation to a similar conclusion that Hijazi Arabic was spoken more slowly and deliberately. The 'drawling' type of non-expiratory stress rhythm makes of course the impression of slowness; hence the nicknames discussed later on. However, it is apparently the stress, not the speed of utterance that causes the phenomena of assimilation and elision.
- 18 A. Meillet (La méthode comparative, p. 88-9) states that languages in which unstressed a is treated differently from unstressed u or i had 'length-stress', not intensity-stress. This would of course apply to Eastern Arabic and many colloquials. It is not quite clear to me on what data Meillet's statement is based. In any case our notions of the nature of stress are so limited that the difference may be a merely verbal one.
- 13 Note that in this colloquial the vowel before the stress is elided, not as in the ancient Eastern dislects the one following the stress.
- 14 The concept of stress is unknown to the Arab grammarians, cf. Schaade, Sibawaihi's Lautlehre, p. 28.
- 18 The most extensive treatment of the 'imāla of the Eastern type is Grünert, Die Imāla, der Umlaut des Arsbischen, Sitzungsber. d. Wiener Ak. d. Wiss., phil.-hist. Ki. kxxi (1875), 447-542. Grünert'a discussion is largely based on Suyūţī. Cf. also Pretzl, Islamica, vi 318-25 (older tajwīd literature).
- ¹⁸ On this principle cf. Nöldeke (Beiträge, p. 7) and Fischer (Haupt Memorial Volume, p. 402, note 1 and Islamica, iii, 52).
 - 17 In the following examples h represents ta' marbuja.
- ¹⁸ Zamakhshari says in the Kashshāf (p. 179) that the apelling represents the pronunciation of those who pronounced *ribā* with *tafkhīm*. In the Mufaṣṣal (p. 160) he prescribes 'imāla of the 4.

- 12 Sarauw (ZAss, xxi, 43) denies that the word could have been borrowed, 'since the Arabs must at any rate have lived'. We might with the same argument claim exist as an Anglo-Saxon word. The native Arabie words were 'umr and 'aish. Actually hayawān 'animal(a)' is derived from the plural of the same Aramaic word (hayūthā or hēwthā) in the sense of 'living being'.
- ²⁰ The derivation is Nöldeke's (Neue Beiträge, p. 51). I do not feel at all happy about it, but would rather suggest that the Ethiopic word was borrowed from Hijazi Arabic, and the latter took it from the Aramaie of the Arabian Jews who might have used the Hebrew maskith (Ezek., viii, 12) in that sense. The Targum renders hadhrey maskithö 'the alcove of his bedchamber', the LXX 'his hidden bedchamber'. From this one could easily derive for maskith the meaning 'alcove, niche', thence 'window-niche'. The use of Hebrew words with a learned allusion is familiar from Yiddish and Yemenite Jewish Arabic.
- ⁸² It is strange that the author of the Lisān should mention himself by name, but I know of no other person so called. Farrā'a family name seems to have been Ibn Manaūr, but why should auch a well-known man suddenly be referred to in this cryptic way?
- ²² According to Kahle (Cairo Geniza, p. 52) the change of qāmeş into an δ-like sound occurred in Palestinian Hebrew at the same time as in Western Syriac, both in the 7-8 century A.D. This dating, if correct, would fit even better with the theory of an Arab origin of the sound-change, falling as it does immediately after the conquest.
- ⁸³ It is of course impossibls to maintain any longer the theory of Praetorius (ZDMG, liv, 369) that the Canaanite shift $d>\delta$ was due to the existence of a non-Semitic substrate. If a substrate were necessary to account for such phonetic changes we should rather assume one in the case of Eastern Arabic fronted α .
- The oldest instance of stressed $d>\delta$ in an Arabic dialect may be the name of the Midianite priest Yithrō, Moses' father-in-law, if it is really the same as Yithrō when, the name of an Ishmaelite (?) in 2 Sam., xvii, 25 (cf. Meyer, Die Israeliten und ihre Nachbarstämme, p. 324). If the Midianite dialect really had undergone this sound-change, it took place in Northern West-Arabian about the same time as in Canaanite.
- ²⁵ Perhaps we might use this Hijazi peculiarity also to account for the strange $qayy\bar{u}m$ 'eterns!', derived from Aramaic $qayy\bar{u}m$. The Koranic spelling should then be taken as denoting " $qayy\bar{u}m$. A reminiscence of this may be found in a statement by Farrã' on Koran, iii, 12: 'Ibn Mas'ūd and the Caliph 'Omar read $qayy\bar{u}m$ instead of $qayy\bar{u}m$; though both were considered correct Hijazi dialect, $qayy\bar{u}m$ was more commonly used'. It is, however, also possible that the Aramaic dialect from which the form was taken over had labialized the \bar{u} to \bar{u} , or that it pronounced long \bar{u} as \bar{v} , as the Yemenite Jews do to-day.
- ³⁶ In Safatene 'wr 'was blind' and hwr 'went'='awira, hawira, the w may have remained consonantal because of the neighbouring r. In Hebrew, w is consonantal before r in hāwar, Arabic hawira 'to be white', and before gutturals in gāwa' 'to die', sāwah 'to shout', etc.
- ** Aramaic had apparently two roots xw'; one < xugh 'to move away' (e.g., Mishnah, Aboth, v, 22), and the other related to x'x' 'to tremble'. The two, of course, influenced each other.
- There seems to have been some wavering in pronunciation even in Kufa. Farra' tells us that the Kufans read in vi, 63 for 'anjaitana' thou bast delivered us', liquid (='anjaina or 'anjāna), and insists that they wrote it secondingly, though some of their codices spelled the word with 'alif (Beck, Orientalia, xvi, 355). Since long a was in Kufa subject to 'imāla, both spellings could be sounded 'anjāna.
- ²⁰ 'Imála of ā in hublā is prescribed by Sībawaihi (ii, 281). Kofler (WZKM, xlvii, 235) asserts that ramā was not pronounced with 'imāla, but I do not know whence be derives this information.

- ²⁰ In Hebrew, as in Arabie, the -ai of the oblique dual was not treated in the same way as the type of -ai just discussed: instead of being monophthongized, it was preserved when stressed and contracted into ey when unstressed.
- אר Another of case this is probably the name of the Nabataean God אידי written in Arabie sources $Dh\bar{u}$ sh-sharā. If Ed. Meyer (Die Israeliten und ihre Nachbarstämme, p. 269) is right in combining the name with the Biblical Sārai, this provides even clearer evidence for $ai > \bar{a}$ in the language of the Nabataean Arabs. One wonders, by the way, whether the ehange of Sārai into Sārā(h) (Gen., xvii, 15), recognized by some scholars as a purely phonetic change, does not signify reception into another tribal group, where -ai h id become -ā. Even Abraham could similarly be explained as the form which 'abrām would take in a dialect with two-peak syllables as in Minaean and occasionally in Aramaic (rehet <*rāx and beheth <*bāth, GVG, i, 53, are hollow roots like rāml).
- ** While 'aliyd and naliyd are written with 'alif, yaliyd as a verbal form is written with yd'. I would auggest that this is due to purely graphic confusion with the proper name.
- ⁸³ No differentiation of this kind seems to have existed in Hebrew. The irregularities in the inflection of nouns like *mar'eh* are best explained either as remnants of the inflection of nouns originally ending in -ī, such as bōneh, or as analogies on nouns from strong roots.
- ⁸⁴ The Sahāh (ii, 569) says that some Arabs shortened final -ī in nouns when these had the definite article, as in *fitedlu l-'aidi* 'with long hands'. It is not certain whether this refers to our dialects. The *shāhid* is by a poet of 'Asad, i.e., one of the tribes mentioned in this connection.
- ²⁵ Kosler (WZKM, xlviii, 78) suggests that in fact the expression of modus had been lost in these forms owing to the shortening of f and d, and that the ware and y'd' were only 'an orthographic reminiscence'. There is hardly enough ground for such a construction of the facts.
- While Classical Arabic possesses no true diphthongs (Cantineau, BSL, xliii, 127), West-Arabian ai is a true monophonematic diphthong, on a par with the long vowels. When shortened, the opposition a:ai is neutralized to a.

Chapter 11

HIJAZ: THE CONSONANTS

a Our information about the consonants of the dialect is scanty. It is still doubtful how far we may take the rules of early tajwid as being representative of Ilijazi pronunciation. It differs from Hijazi in its treatment of hamza (cf. § 11 below) and may have differed in many other respects. Thus the of early tajwīd was a voiced uvular plosive (cf. Vollers, Ninth Or. Congr., ii, 138) as it is to-day in bedouin colloquials and those descended from them and in Central Yemenite (Goitein, Jemenica, p. xiv; Rossi, San'a, p. 2). For Hijazi colloquial I know only the statement of Maltzan, on hearsay, that the 'gāf 'arebi' was used at Meeca (ZDMG, xxvii, 243). In an Arabie-Tigrigna vocabulary in Ethiopic characters, published by Littmann (ZAss., xxi, 57-90) the Arabic qaf is almost invariably transliterated by Ethiopic gaml. The Arabie in the vocabulary is presumably that of merchants from Hijaz. A proof for gaf in ancient times might be found in the form qass 'gypsum, whitewash' said by Ibn Durustawaih (in Suyūţī, Muzhir, i, 162) to have been used in the Hijaz for common Arabie jass (Ibn Sīda, in Lisān, viii, 345, says the Hijazi form was qassa or qissa). This would be a proof that Hijazi qaf was voiced, but only if we derive the word from Syriac gessa (and the latter from Greek gypson). However, the word in this form probably comes from South-Arabia, where it has qaf (gaf) to-day (Rossi, San'a, p. 211) and had it in the Middle Ages (Hamdanī, 'Iklīl, p. 29). In a South-Arabian inscription at Wadī Rukhaila the words gyrm wqşm 'lime and plaster' appear (Stark, JRAS, 1939, plate 7; Ryekmans, Muséon, lii, 313). It is possible that the forms with g, as in Syriac and Mishnaie Hebrew (Mishnah, Migwa'oth, xi, 2) are the older ones. In this case the q in South Arabia is due to distant assimilation (on this cf. GVG, i, 166), and the Hijazi form is borrowed from Yemen. As it received its q there, it cannot assist us in determining the sound of Hijazi qaf. In the Tamim dialect q was sounded intermediate between qaf and kaf, articulated against the uvula and 'thick' (taghlizu).1 This Tamimi sound is represented by the letter kaf (Jamhara, i, 5; Ibn Faris, Ṣāḥibī, p. 25). This way of pronouncing qāf was called qāf al-ma'qūda 'tied q'. In the dictionaries there appears a number of cases where the Tamim dialect had kaf instead of qaf. This presupposes that the two were phonetically similar. All this leads to the conclusion that the qaf of the Eastern dialects was voiceless (phonetic q) like that of the modern Hadari colloquials of Syria, Egypt, etc. The modern Iraqi colloquial has a voiced qaf, bowever, and must have had one at an early date because in some cases Aramaic g is represented in Iraqi place names by q, e.g., Bāqidārī (near Baghdad: Yaqut, Mu'jam, i, 475) from Bē Gēdhārē, Greek Gadara, and

Bāqirdē (with 'imāla), or Qardā (Yāqūt, i, 476) from Gardā. The poet Bashshār b. Burd (d. 167/783) transcribes the Aramaie word gamlā 'camel' in one of his poems as qaml (Jawāliqī, Mu'arrab, p. 67). This is difficult to explain in view of what we said about the Eastern qaf. However, there are other signs that the Iraqi dialect was at some time deeply influenced by bedouin dialects of a Western type. We may, in view of the fact that the bedouin dialects and the Yemenite colloquial of our days have voiced qaf, assume that the qaf of West-Arahian was also voiced, although so far no evidence is available for ancient times. The voiced qaf of tajwīd would then be a true continuation of the Prophet's own pronunciation. But as tajwid rarely represents a pure Hijazi tradition (ef. the hamza and the vowels), the voiced qaf must have been used outside the Hijaz as well, especially in those archaie Najdi dialects which provided the basis of Classical Arabic. The voiceless sound used in the Eastern dialects can, therefore, not have been old-inherited. However, the 'emphatics' were originally neutral as regards voice (ef. further the note § 14h) and were variously fixed in the different dialects. The voiceless q of Aramaie may have been a contributory factor in turning the Eastern qaf into a voiceless sound.

b Vollers (ZDMG, xlix, 495) observed that wherever $q\bar{a}f$ is voiced in Arabic, $j\bar{i}m$ has a palatal articulation. We might add that dialects with a voiceless $q\bar{a}f$ show a similar tendency to palatalize $h\bar{a}f$, a tendency which was not unknown to the ancient Eastern dialects (cf. the discussion of the 'Kashkasha' by Barth, WZKM, xxiv, 281 seq.). The $j\bar{i}m$ of early $tajw\bar{i}d$ cannot have been the pure palatal J, as that sound was specially noted in connection with the dialect of Yemen (cf. § 4 i). Maltzan (ZDMG, xxvii, 243) heard the Hijazi $j\bar{i}m$ pronounced 'soft, like French dj'. In the Arabie-Tigrigna vocabulary Arabie $j\bar{i}m$ is transliterated as $zh\bar{a}i$ ', not as djent f, so that any sound like J is excluded (Littmann, ZAss., xxi, 52). Kampfimeyer (ZDPV, xv, 18) quotes an oral communication of Socin's that in parts of Hijaz $j\bar{i}m$ is sounded like g, but there is nothing to prove that this pronunciation is old.

c Data for the pharyngals are confusing. In view of what has been said in § 4 l, we can rule out 'antā for 'a'tā as evidence for the sound of 'ain. In the statement on the extension of that form Medina and Sa'd b. Bakr, but not Meeca, are mentioned. In the Koran 'a'tā is frequent, but I know of only one case in which 'antā was read for it, namely eviii, I, where 'Ubayy's codex was said to have had 'antaināka, which was also read by the Yemenite, later Basrian, Ibn as-Samaifa' and the older Basrian Hasan (Jeffery, Materials, p. 180). We can bardly attach much importance to the fact that this is one of the earliest Suras; it would be difficult to believe that the Prophet learnt only later on that 'a'tā was the correct form.

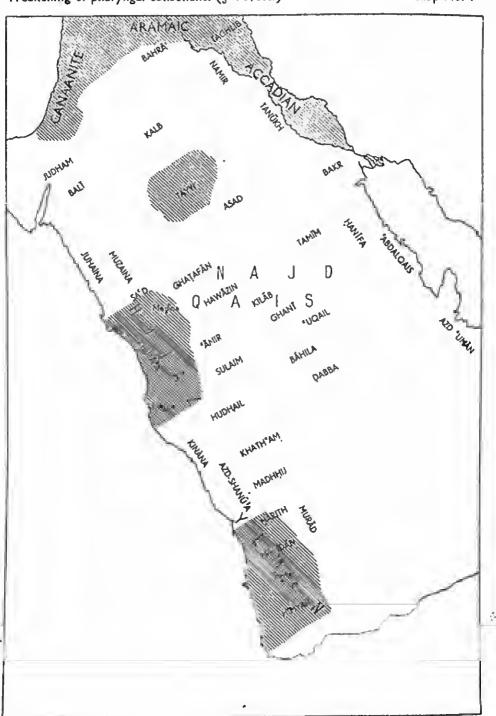

d A very late source ('Aințăbī, Qāmūs Ture., i, 284) states that the Sa'd b. Bakr, north of Medina, pronounced na'am 'yes' as naham. Ibn Mălik

(Tashīl, f. 86 b) gives the same without specifying the dialect. We have seen that the Hudbali Ibn Mas'ūd is said to have used that pronunciation (Ibn Hishām, Mughnī, ii, 25, cf. § 8 p). As in Mecca the word was pronounced na'im (cf. § 10 i), this naham may have been a local form of Medina and district. The Shammar of the Jezira, a tribe that claims to be descended from the Tayyi', say haṭa instead of 'aṭa (Montagne, 'Contes', BEOIFD, p. 75, quoted by Cantincau, Parlers, p. 145). Cantineau connects this with hāt 'givel', but it may also be explained as the result of a double sound-change: 'aṭa > haṭa and then h weakened to h (cf. § f below).

e 'Azharī (in Tāi, x, 12) assigns to the Hijaz dialect the forms 'ādā 'be helped' and ista'da 'he asked for help', for 'a'da, ista'da. The shahid is by the Tayyi' poet Tirimmah (xlviii, 8), and there is better evidence for the depharyngalization of 'ain in that dialect (cf. § 14 q). This does not exclude that it was current in Hijaz, as results from some hadith quotations of 'Azhari. Maltzan (ZDMG, xxvii, 244) heard 'ain pronounced like hamza in the neighbourhood of Hodeida, in the Yemenite Tihāma; at Ṣan'ā', too, 'ain is rather weak (Rossi, San'a, p. 4). The occurrence of de-pharyngalized 'ain both at the southern and the northern extremity of the West-Arabian area rather strongly suggests that it was an inherent tendency of the language. As against this, the Eastern dialects are said to have changed hamza in certain cases into 'ain (references in § 8 q). The only instance which is at all well attested is 'an for 'an and 'anna for 'anna, and in this case it is difficult to say which form is earlier, since both the conjunction 'an and the preposition 'an are without cognates. It may be that 'an is nothing but a depharyngalized, unstressed, version of 'an. For the transition of meaning, one need only compare Assyrian sha 'of' and Phoenician and Hebrew sha, she 'that' (also 'who, which'). This, however, would imply extension of the de-pharyngalizing tendency as far east as the dialects which formed the basis of Classical Arabic.

f We have fuller evidence for a similar weakening of h in Hijaz. Ibn Duraid (Jambara, ii, 377) states it in a general way, giving as an example Hijazi madaha for madaha 'to praise' and a report that the Prophet said waihaka for waihaka 'woe to thee'. Mubarrad (Kāmil, p. 517), however, says this change took place in the dialect of Sa'd b. Zaid Manāt. Two MSS. of the Kāmil add Lakhm. The latter seems to be nothing but the usual gibe at the 'Nabataeans', with whom the Lakhm in Hira lived in close association. The 'Sa'd' may originally have been the Sa'd b. Bakr in the Northern Hijaz, and the other reading due to copyists. In Southern Yemen h is almost completely devoid of pharyngal friction (Landberg, Hadramout, p. 253; Arabica, v, 77, 281; Rhodokanakis, Dhofar, ii, 75).

g In a line by Samau'al b. 'Adiya' (ed. Cheikho, iii, 12, quoted by 'Abū Zaid, Nawadir, p. 104; Lisan, ii, 332) a word khabīt occurs in rhyme.

'Aṣma'i took this to he the same as khabīth 'repulsive' and concluded from it that the Jews of Khaihar prounoneed th as t. He admits that Khalīl (d. 175/791) denied ever having heard of such a trait in that dialect. The author of the Lisān suggests reading khatīt 'contemptible'. There is nothing inherently improhable in the assumption that the Jews, who presumably spoke, or had recently spoken, Aramaic, confused th and t. The instance given, however, cannot he used to prove this. In the final position the t would have been pronounced th in Aramaie, too, and in any event khabīt is a good Arahic word, perhaps one peculiar to the Hijaz dialect. The form mukhbit 'lowly' occurs Koran, xxii, 35/34; a desert region in Hijaz is called al-Khabt 'the depression'. The same root recurs in the Palestinian locality Habhtā (Aphtha in Josephus). There is thus no difficulty in admitting that khabīt means 'lowly'.

h Farra' (in Lisān, xiii, 74) states that the form ban for bal 'hut'—which others, such as Ihn Jinnī, considered Classical Arabic—was current in the dialects of Sa'd and Kalh (in Tāj, ix, 145, Quḍā'a for Kalb). In a separate statement he adds that he heard people of the Qais tribe Bāhila say lā ban for lā bal. This dissimilation may have occurred in a wider area and only in those two dialects the dissimilated form gained more extensive currency (cf. Tigrigna and Moroccan Arahic ne for la 'to', Brockelmann, GVG, i, 227, 224).

i In a line by 'A'sha (ed. Geyer, xix, 1) the verbal noun of khawisa 'to have deep-set eyes' is khais instead of khaus. It is not impossible that the verh had in the Hijaz dialect become khayisa or khēsa (cf. § 10 y), or this may he an instance of the general confusion of au and ai of which we shall have examples in the Tayyi' dialect (§ 14 n).3 'Abū 1-'Aswad (d. 69/188) heard Ihn 'Umar use hauthu for haithu 'where' (Lisan, ii, 444). However, Mufaddal (in Lisan, viii, 300) accounts for this form hy saying that in the Hijaz -awwā- became -ayyā- hy substitution (mu'āqaba). As instances he cites sayyām for sawwām 'keen on fasting' and sayyāgh for sawwāgh 'goldsmith'. The latter word is given as a Hijazi form also by Jauhari (Şaḥāḥ, ii, 6).8 In Jewish Palestinian Aramaic all verhs mediæ w have yy instead of ww in the intensive conjugation (Dalman, Gramm., p. 316): this is the consistent application of a process which turned already at a very early date qawwem 'to maintain' into qayyêm, the form that appears in the Elephantine Papyri, Bihlical Aramaic, Late Bihlical Hehrew, and Syriac. Just as Schwarz (Umar, iv, 102) explains that the Hijazi forms are due to analogy with mediæ y, so does Brockelmann (GVG, i, 616) with the Aramaic ones. In Aramaic, however, the verbs mediæ y-always rare-were disappearing altogether, and therefore unlikely to exert any attraction on roots mediæ w. The Arah philologists were thus right in considering the change as a purely phonological one. We have thus a further late development common to Palestine and West-Arahia.

k According to Ibn Mālik (Tasbīl, f. 108) feminines of the form fu'ld from roots tertiæ w, when not used as elatives, turn the w into y, except for isolated cases such as hulwa 'adorned' in all dialects and quswa 'extreme' in all dialects except that of Tamim. The form quewi is specifically assigned to the Hijaz dialect by Farra' (in Lisan, xx, 44, cf. also Ibn Qutaiba, 'Adab, p. 626; Ibn 'Aqil, p. 371), perhaps because it occurs in the Koran (viii, 43/42). The Koran, however, also contains cases of y, as dunyā, 'ulyā, etc. The reason for the substitution outside the Hijaz-if indeed the w is specifically Hijazi-was perhaps phonetical, as other instances of vacillation between w and y after a consonant can be found. In the case of khuşwa: khuşya 'testicle' and kulya: kulwa 'kidney', the fact that Syrian bedouin colloquials have khōṣwa, čōlwa (Cantineau, Parlers, p. 15, 222) may lead us to assign the w-forms to West-Arabian. This is not necessarily contradicted by Hijazi qinya 'flock' as against Tamimi qunwa (Yūnus in Suyūṭī, Muzhir, ii, 176: the lexica also give the forms qinwa and qunya). It seems that, while Eastern Arabic bad qnw, West-Arabian had qny, like Hebrew, Aramaic, South Arabian, and Ethiopie. The Hudbali Şakhr al-Ghayy (Lisan, xx, 64) used qunyan, which looks like a loan-word. Instances for the verb qny in the Lisan (ibid.) are all from Western sources (Hadith, Hatim Ta'i, Tammahi).

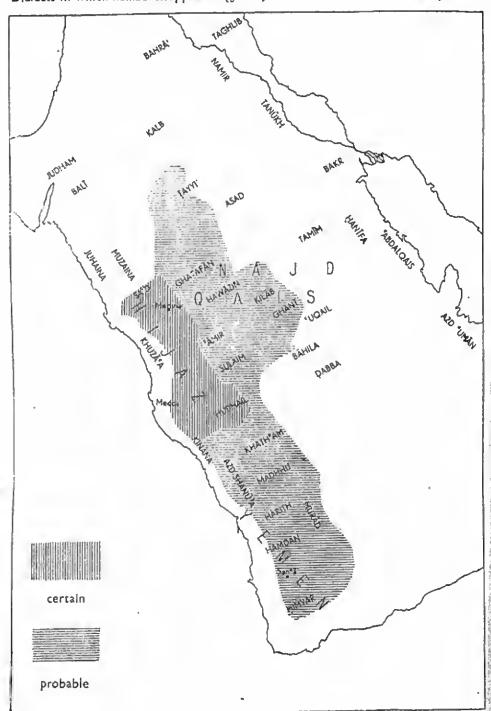

1 The most celebrated feature of the Hijaz dialect is the disappearance of the hamza, or glottal stop. Since it is responsible for the only real difficulties of Arabic spelling and pronunciation, this sound-change has received a great deal of attention. Apart from the work of Arab philologists, the following European works deserve mention: Weil, ZAss., xix, 1-63 (material from grammarians), Schwarz, Umar, pp. 103-9 (Hijazi poetry), id., ZAss., xxx, 46-59 (spellings in Koran codices), Bergsträsser in GQ, iii, 43-9 (official Koran orthography), Vollers, Volkssprache, pp. 83-96 (various sources), Wetzstein, ZDMG, xxii, 168-74 (a bedouin colloquial), Pretzl, Islamica, vi, 303-18 (tajwid). The present writer attempted in Comptes Rendus du GLECS, iii, 77-9 to explain the facts phonetically, with illustrations from experimental work on Modern Hebrew, where the same change is now taking place. Much of the complication of the problem derives from the superposition of Eastern pronunciation upon a Western spelling, with subsequent modifications in both, which has produced our modern spelling. The same thing, a not always consistent attempt to introduce full sounding of the glottal stop into a consonant spelling that betrays a pronunciation which had lost that sound, is responsible for some peculiarities of Biblical Hebrew vocalization (cf. Bergsträsser, Hebr. Gramm., i, 89-93).

m Every Semitic dialect shows signs of this tendency to dispense with the glottal stop, though only in Aramaic can we observe that it disappeared as completely as in West-Arabian. Eastern Arabic, as described by the philologists was extremely conservative in this respect; it is rivalled only by

Ugaritic. Nevertheless, even there hamza was elided in yuqtilu < *yu'aqtilu and in allāh < al-'ilāh (cf. Schwarz, Umar, iv, 103). In the Tamim dialect *yar'ā (Hebrew yir'eh) 'he sees' became yarā, as elsewhere (Sibawaihi, ii, 37), and they dropped final hamza after a vowel in pause (ibid., 311). All dialects except that of Tamim elided the second of two hamzas separated only by a short vowel, elengthening that vowel where the hamza came directly before a consonant (Zamakhshari, Mufassal, p. 167); some unspecified dialect lengthened the vowel, but still articulated the hamza (ibid.). Yet just on this point of agreement between dialects the grammarians' views differed. The form 'a'imma, plur. of 'imām 'guide', which Sībawaihi rejected in favour of 'ayimma, was adopted by all Kufan readers. The usage of the best later MSS. does not 'alleviate' the hamza even in such cases. Older Koranic orthography displays a notable lack of consistency (GQ, iii, 45). Contractions affecting initial vowels, as in lawanna for lau 'anna, are found in Eastern poets; yāla for yā 'āla (Wright, ii, 153B)10 is the only form found anywhere. If our principle is correct that poetic license mirrors actual usage, then hamza was less firm in the Eastern dialects than the grammarians want us to believe. As for West-Arabian, there is no doubt that hamza had disappeared over the whole area. 'Abū Zaid (in Lisān, i, 14) limits the elision of hamza to 'the people of Hijaz, Hudhail, Mecca, and Medina'. Immediately afterwards he adds some of the 'Banu 'Ajlan of Qais', 11 though the Qais are said to have preserved the hamza (Jārabardī, quoted Howell, iv, 930) or even to have turned it occasionally into 'ain (Suyūṭī, Muzhir, i, 133). 'Azharī (quoted Howell, iv, 824) says that part of Tayyi' did not pronounce the glottal stop. We have found indications of its disappearance in the Yemenite dialect (§ 4 n). Cf. map. No. 14.

n The general statements of the grammarians all show clearly that hamsa had completely disappeared as a phoneme, not merely become weakened in articulation: The Tamim always pronounce the hamsa, the Hijazis only when they are forced ('Isā b. 'Umar in Lisān, i, 14); the people of Hijaz find it difficult to sound even one hamsa—let alone two consecutive ones (Sībawaihi, ii, 172); the Hijazis do not articulate the glottal stop (Ṣaḥāḥ, i, 402); hamsa has no place in the dialect of Quraisb (laisa min lughati Q.) (Ibn 'Athīr in Tāj, x, 128), etc. This does not mean that they did not sound a glottal stop before vowels in the absolute initial position (ibtidā'). That they did so is stated expressly by Ibn Fāris (Ṣāḥibī, p. 71) and by Jazarī (Nashr, i, 422). Within the sentence, of course, this glottal stop disappeared (cf. 'Astarābādī, quoted Howell, iv, 930 and Jārabardī, ibid., p. 940).

o Of course the Hijazis were able to pronounce a glottal stop just as much as an Englishman is, but since it was not a phoneme of their language they would misplace it when they made an effort to pronounce it. This is what is sometimes called over-correctness. Hijazi poets often treat hamzat al-was

like hamzat al-qat' (Schwarz, Umar, iv, 109). That this was not mere poetic license (Wright, ii, 377A), but unfamiliarity with correct usage, is proved by the fact that the substitution bardly ever affects the article, which was the most obvious and frequent of the words with 'alif al-waşl. The Hijazis said nabī'un instead of nabiyyun 'prophet', barī'a for bariyya 'creation' (Sībawaihi, ii, 175); the Hijazi Nāfi' was the only reader who read 'anbī'ā'u for 'anbiyā'u 'prophets' (Baiḍāwī, i, 73). The two words were of foreign origin (Jeffery, Foreign Vocabulary, p. 276, 76) and presumably reached Arabie in their Aramaic forms, without hamzas.

p The Arab grammarians do not speak of the disappearance of the glottal stop and its consequences, but of alleviation (takhfif), in which they distinguish various grades: elision (hadhf), replacement by w or y ('ibdāl), or transformation into hamzat baina baina (Weil, ZAss., xix, 16). Their terminology could only operate with consonant letters. From our point of view it is sounder to consider the various happenings as due to the meeting of sounds previously separated by the hamza. In particular, the fall of hamza created diphthongs unknown to Arabie, of which the language had somehow to get rid. We thus classify our phenomena according to the position of the elided hamza relative to adjoining vowels and consonants. We need not consider its place within the word, since initial and final hamza were treated the same as medial ones, except at the absolute beginning or end of an utterance. It is quite possible that differences in sound-development were caused by the position of the elided hamza with relation to word stress, but I have so far found no evidence of this.

q Where hamza had stood hetween a consonant and a vowel, its elision caused no change except the displacement of the syllable boundary, as in qi-ra for qir-'a 'pestilence' ('Aşma'ī, 'Addād, p. 5); qu-rān for qur-'ān (Nisābūri, Gharā'ib, i, 31). This is the same as what happened in Christian Palestinian Aramaic (cf. Nöldeke, ZDMG, xxii, 466), Biblical and Modern Hebrew (cf. Rabin, Melilah, ii, 248), and in the colloquials (e.g., mara < mar'a 'woman', Rhodokanakis, Dhofar, ii, 74). In Koran spelling the original hamza is not indicated in most cases, e.g., yasamu (xli, 49), tasamū (ii, 282) for yas'amu, tas'amū; mashamatun (lvi, 9) for mash'amatun; yanauna (vi, 26) for yan'auna; tajarū (xxiii, 67/65) for taj'arū; and the frequent 'afidatun 'hearts' for 'af'idatun, yasalu 'he asks', for yas'alu, ete., and malakun 'angel' for mal'akun. With the article an 'alif is normally writtenno doubt because the form without article was present in the mind of the seribe—but there are cases such as 'ashābu laikati اصحاب ليكة for 'ashābu l-'aikati 'people of the forest' (xxxviii, 12/13). However, nash'atun is twice (xxix, 19/20; lvi, 62) spelled with an 'alif, نشاة. As far as I know this is the only case in the Koran of a post-eonsonantal hamza being followed by the feminine ending. Apparently the form is to be read nashātun. Zamakhsbari . (Mufassal, p. 165) tells us that some dialects 'other than that of Hijaz' said al-mard for al-mar'a 'the woman' and al-kamā for al-kam'a 'the truffles'. The shāhid given is attributed to the Iraqi townsman Kumait, of Tamimi origin. The Tunis colloquial also has mrā 'woman', which however appears to be transformed on the analogy of the pattern of rdā, from ridā' (Stumme, Grammar, p. 49). Perhaps the ancient form is also due to the tendency to avoid an unusual pattern. Other instances of lengthening are douhtful. 'Omar b. 'Abī Rabī'a has in one line tadābāni for tad'abāni 'ye two strive' (Schwarz, iv, 106), but this prohably re-derived from Hijazi dāba for da'aba. For the form malāk for mal'ak 'angel' there is no evidence earlier than the 7th/13th century (cf. Boneschi, JAOS, lxv, 109).

r Where hamza was elided before the 'i'rāb-vowel, it was not expressed in writing, since in pause the vowel would also fall off. Thus rid'u 'assistance', Hijazi ridu, would become in pause rid ('Astarāhādī, quoted Howell, iv, 801). The Tamim dialect preserved the hamza in pause through either transposing the case-vowel before it: ar-ridu', gen. ar-ridi', acc. ar-rida', or in some dialects, inserting a neutral vowel before the hamza which took the colour of the stress vowel: ar-ridi' in all cases (Sībawaihi, ii, 312; cf. Birkeland, Pausalformen, p. 61). With final hamza Arabic orthography preserved Koranic usage, although in the body of the word it introduced the letter 'ahif to indicate the place of the hamza before a:

s The only exception from our rule regarding hamza after consonant is where that consonant was w or y. In those cases the consonant was doubled: 'awwanta for 'au 'anta' or thou', ra'aitu ghulāmayyabīka for ghulamai 'abīka' I saw the two servants of thy father' (Sībawaihi, ii, 175-6). The latter phrase was heard by 'Abū Zaid among the Banū 'Ajlān of Qais (Lisān, i, 14, cf. § m above). Another example may be hudayyā for hudai'a, the diminutive of hid'a' 'kite' ('Abū Ḥātim in Lisān, i, 47, cf. also § ee below). The same process took place in the colloquial of Zafār, where hamza is still largely preserved, e.g., nawwe=nau'a 'cloud', hayye=hai'a 'shape' (Rhodokanakis, Dhofar, ii, 74). '3 Cantineau (BEO, i, 92) suggests that the same change would account for the Aramaic emphatic state of the plur. -ayyā, from *-ay'ā (as in the singular malkā from *malka-'ā). The hamza was in all these cases assimilated to the preceding semi-vowel. Such a change would, of course, have taken place before the complete disappearance of hamza.

t In Koranic readings there are also cases of assimilation of hamza to other consonants preceding it. 14 In viii, 24, some read al-marri for al-mar'i 'of the man'; in xv, 44, the Medinean Zuhrī read juzzun for juz'un 'a share'. Both are not pausal. Zamakhsharī (Kashshāf, p. 720) considers these as cases of pausal doubling (Wright, ii, 369A) transferred into context, although he, like all other grammarians, holds that pausal doubling cannot apply in words ending in hamza (Mufaṣṣal, p. 161). In Hijaz, there was of course no

hamza at the end of these words. It is more likely that the two words represent attempts to adapt the forms *maru, *juzu to more normal patterns (cf. 'abb, 'akhkh, § 7 m and marāh, nashāh, § q above). However, none of these explanations can apply in the case of tarriyya (besides tariyya) for tar'iyya 'last trace of menstrual blood', which is not described as dialect form (Laith in Lisān, xix, 10). This word, however, appears to be foreign, from Mishnaic rē'iyyāh 'a single flow of blood, an attack of gonorrbœa'. Is It is doubtful whether any of these instances have anything to do with the Hijaz dialect.

u Where a hamza stood between a vowel and a consonant, closing a syllable, the vowel was lengthened and the hamza disappeared, as shown by Koranic orthography. The number of morce was thus preserved (Arabic rhythm belongs to the 'moræ-counting' variety, cf. Trubctzkoy, Grundzüge der Phonologie, p. 174; Cantineau, BSL, xliii, 128). The long vowels resulting from this rhyme freely with original long vowels (Schwarz, Umar, iv, 109). The 'alif denoting the lengthened a was omitted in the spelling of old codices in the same way as original \bar{a} (GQ, iii, 33). Few cases are mentioned in the lexica. One is jūna for ju'na 'leather bag' (Yūnus in Suyūṭī, Muzhir, ii, 176; Ibn Qarqul in Taj, ix, 159), but Jauhari (Şahah, ii, 364) knows nothing of ju'na, only juna.16 In the central Yemenite colloquial a vowel preceding hamza before consonant is lengthened, though the hamza is still pronounced (Goitein, Jemenica, p. xiii). Similarly, a becomes ā in Ethiopic before vowelless gutturals. This may belp to account for the anomaly of Hebrew, where the vowel in words like *ra's became \bar{a} and subsequently o at a very early date (rushunu in Tell el-Amarna), and yet the 'aleph is written in rosh, son, etc. There is no need to assume that the 'aleph was elided simultaneously with or before the lengthening. We may be justified in assuming the same order of events in Hijazi Arabic: first lengthening of the vowel with preservation of the hamza, then fall of the hamza, leaving only the long vowel. The term 'compensatory lengthening' thus does not apply in this case.

v For assimilation of hamza to a semivowel following it, there is only the one instance of $ruyy\bar{a}$ for $ru'y\bar{a}$ 'dream' (Zamakhsharī, Kashshāf, p. 641; Kisā'ī in Lisān, xix, 9). Zamakhsharī considers this form vulgar ('āmmiyya) and Farrā' (in Lisān, loc. cit.) admits it only in conversation ($f\bar{\imath}$ l-kalām), not in Koran reading. It is, however, the pronunciation on which the Koranic spelling \underline{u}_j is based. There was also a form $riyy\bar{a}$ ('Akhfash in Lisān, loc. cit.), not said to belong to any dialect. In view of the fact that the oldest form appears to have been $r\bar{u}yy\bar{a}$ (so in Lisān), and the Hijaz dialect changed \bar{u} into i in the hollow verbs (§ 12 t), it seems probable that $riyy\bar{a}$ was the real Hijazi form. In the Canaanite area the same word, apparently with the same contraction, is found in ryt 'spectacle' in the Moabite Mesha' stele (line 12), which we therefore ought to read riyyat. In the case of riyyu for ri'yu

'sight', which is the reading of the Medineans in Koran, xix, 75/74 and occurs in a hadith (Lisan, xix, 7), we cannot decide whether it represents rī-yu, with the ordinary lengthening of the vowel, or riy-yu, with assimilation. There are, again, some instances of assimilation of hamza to other consonants. It seems well established with the t of the eighth conjugation. The Kufan 'Asim read in ii. 283 alladhi-ttumina for alladhi-'tumina 'who was trusted' (Zamakhsharī, Kashshāf, p. 184); the form occurs in early prose (Tabari Glossary, p. cxx). Zamakhshari (loc. cit.) eites ittazara 'to put on an 'izār' as a vulgar form. In the case of ittakhadha 'he took for himself' the assimilation is admitted in Classical Arabic: the secondary root takhidha derived from it is said to be Hudhail dial. (Fārisī, Diw. Hudh. i, 86).18 Such forms are very rare in the colloquials, e.g., mummin = mu'min 'believer' in Syrian bedouin colloquial (Wetzstein, ZDMG, xxii, 172). Isolated instances are found in Accadian, Aramaie, and Ethiopic (cf. Broekelmann, GVG, i, § 56, 64). They may be more frequent in the Koran than we suspect. The شتما (Kufic codex of Samargand spells shi tumā 'ye two wanted' (ii, 33/35) (Jeffery and Mendelsohn, JAOS, lxii, 183). This may stand for shittumā. Perhaps the very frequent oceasions on which 'alif is omitted in 'akhta'na, ta'wil, etc. (GQ, iii, 33), may hide further cases. Early Christian Arabic also writes ittamara 'planned', ittamana 'was entrusted' (Graf, Sprachgebraueh, p. 18).19

w Where hamza was preceded and followed by the same short vowel, these were contracted into the corresponding length, as in sāla for sa'ala 'he asked' (for Hijaz, Baidāwi, i, 552, ii, 355; for Hudhail, Tāj, vii, 365). It is not quite clear what happened if the sound-complex would have come to stand in a closed syllable, where Arabic avoided long vowels. In poetry such contractions seem to produce short vowels, as in wailu (waili) 'ummihi> wailummihi 'woe to his mother'. All cases quoted by Schwarz (Umar, iv, 107) concern initial syllables, however, where the example of the 'alif alwasl may bave led to simple elision of the initial vowel. The Koranie orthography writes sa'altum with an 'alif. In a hadith (Bukhārī, Diyāt, 21; Qastallānī, x, 65) we find 'antum for 'a'antum 'did ye'. The Hijazis, according to the Lisan (xix, 5) even said 'ara'aita for the common 'araita 'tell me'. On its spelling in the Koran there are conflicting traditions (GQ, iii, 44). Though the form may be derived from the particle "'arai 'behold' (Barth, Sprachw. Unters., ii, 27 seq.; Marcel Cohen, Expression du temps, p. 89) it was clearly looked upon by the Hijazi readers as a form of ra'a and treated accordingly. These, however, were not ordinary long vowels. 'Abū Zaid (in Lisān, xix, 7) says that in ra'aitu 'if one wishes to elide the hamza, one pronounces the 'alif without giving it full weight (bi-ghairi 'ishl a'in), but does not let the hamza disappear altogether'. What seems to be implied is a two-peak stress, or distribution of the long ā over two syllables. This is the

same as the hamzat baina baina (§ bb below) but is nowhere called by this name. Zamakhsharī (Mufaṣṣal, p. 166) lays down the use of hamzat baina baina even for sa'ala, admitting contraction as an alternative, but does not mention our case. A special case is ka'ayyin 'bow many'. The form kāyin appears in a line by the Tamimi Jarīr (I, ix, 4), but the Lisān (xvii, 255) quotes a line with kāyin and the Western mil- for mina l- (§ 7 o), and the Meccan Ibn Kathīr read kā'in or kāyin in iii, 140/6. Other examples come from Lahīd (ix, 2), a Ḥanafī, i.e., an Easterner (Ḥamāsa of Buḥturī, p. 18, line 1). It is in any event not proved that kāyin is a Western form. The Meccan Ibn Muḥaiṣin read ka'ai (Suyūṭī, Jam', ii, 76). I cannot account for the relation between the three forms. Other cases are not available so far.

x Where hamza was preceded by a short vowel and followed by the corresponding long vowel, the two were contracted into one length, as in Jibrīl for Jibrī'īl (Tāj, iii, 84), rūs for ru'ūs 'heads' in a line of Qais b. Khaṭīm (Ibn Duraid, Ishtiqāq, p. 68). ²⁰ In the vocalization of the Koran two vowels are written, but we should read only one, e.g., khāṭīna for the frequent khāṭī'īna 'sinners', in lv, 24 munshāt for munsha'āt 'lofty ones' (cf. GQ, iii, 44, 45), and of course rūs for ru'ūs. The contracted syllables were in Hijazi poems counted as one length (Schwarz, Umar, iv, 107).

y In the comparatively rare case, occurring only with a, where hamza was preceded by a long vowel and followed by the corresponding short one as in sā'ala 'he inquired' (cf. further § kk below), two ways were possible. One, vouchsafed by the grammarians, was to keep both vowels apart, without any contraction or glide, as two prosodic syllables (Lisan, i, 196). What separated them was a hiatus, the intention of a sound (fi n-niyya: Ihn Ya'ish, p. 1308), not a sound (cf. Schaade, Sibaw. Lautlehre, p. 32; Bravmann, Materialien, p. 93). No wonder the grammarians found it impossible to describe the sound (Weil, ZAss., xix, 19). We shall find this entity, the so-called hamzat baina baina, again in a number of contexts. It is doubtful whether this hamzat baina baina really belongs to Hijazi pronunciation. While the Koranic spellings with 'alif might possibly represent it, the two syllables are often counted as one in Hijazi poetry (Schwarz, Umar, iv, 108), thus showing that to the feeling of the Hijazi speaker they had completely coalesced. The difference is in fact only one of degree. In modern colloquial Hehrew such complexes are pronounced with a steeply falling tone, and it is often impossible to say whether one has heard one vowel or two, the first with the high pitch of a stressed syllable, the second with the low pitch of an unstressed one (cf. Rabin, GLECS, iii, 78). The contracted vowels are condemned as vulgar hy Ihn Qutaiha ('Adah al-Kātib, p. 394).

z Since the hamzat baina baina was the nearest thing to a real hamza that the Hijaz dialect possessed, it was presumably the 'sound' Hijazi speakers used when they spoke carefully and tried to avoid the contractions and glides

of their dialect. In the effort to sound clearly vowels otherwise contracted, they seem occasionally to have leogthened short vowels preceding a hamza, and treated them in prosody as lengths (cf. Schwarz, Umar, p. 174; ZAss., xxix, 50). Traces of similar tendencies exist in Koranic spelling, but the resulting spellings seem to have been misapplied (cf. GQ, iii, 48 seq.). We have here another instance of over-correctness (cf. § o above).

aa There are no examples of hamza with the same long vowel before and after it in Hijazi texts. Schwarz (Umar, iv, 109) adduces yatarāyānā 'they pretend before each other', 21 but this is not a phonetic transformation of yatarā'ānā, but derived from the Hijazi third conjugation rāyā (Lisān, xix, 8), which is re-formed from the imperf. yurā'ī>yurāyī (cf. § 4 p). The Christian Arabic qirāyāt for qirā'āt (Graf, Sprachgebrauch, p. 19) arose in the same way.

bb If the vowels flanking the hamza were different, various treatments of the resulting complexes existed side by side. The most common ones were to keep them separate with hamzat baina baina or to insert a glide between them. Observation of modern Hebrew again teaches that these are merely differences of degree, with innumerable gradations between them. The existence of the same alternatives in Central Yemenite colloquial has been observed by Goitein (Jemenica, p. xiii). The main factor is speed of utteracce: the slower it is the less audible the glide. The nature of the glide is determined by the narrower vowel: between a and u it is w, between a and i it is y. Zamakhsharī (Mufassal, p. 166) declares that the glide develops only in u-a, i-a, but not in a-u, a-i. This is a very fine phonetic observation, fully borne out by kymograms of Modern Hebrew. Yet the notations of Hijazi pronunciations write y and w in the latter case, too, as there were no other signs available, e.g., hīnayidhin for hīna'idhin 'at that time' (Ibn Khālawaih, Badī', p. 151) and Ibn 'Abbās's reading in iv, 141/142, yurāwūna for yurā'una 'they pretend' (Jeffery, p. 197). The word boundary was of course not respected in actual pronunciation, as in 'agriyabāka for 'agri' 'abāka 'teach thy father the Koran' (Sībawaihi, ii, 172). In the Koran such spellings are rare, but they do occur in phrases which may have been felt to form a close unity, as yabnawumma بينوم for ya bna 'umma 'son of my mother' (xx, 95/94). The spelliog with glide is applied without exception in the Korao: later usage bas changed nothing except in setting a hamza over the glide-sound. Examples of pronunciations with glide are collected by Järabardī (in Howell, iv, 940) and by Schwarz (Umar, iv, 106). It is not clear what glide developed between i and u. The form sila (Koran, ii, 102/8) is not a phonetic development of suyila < su'ila, but is the normal Hijazi passive of the Hijazi verb sāla=sa'ala. The spelling 'scoffers' for mustahzi'una (Koran, ii, 13/4) may either represent mustahziwuna or mustahzuna. Akhfash read yastahziyuna (passim; Zamakhshari, Mufassal, p. 166).

cc The reading mustahzūna is an instance of another treatment of these complexes: absorption of the short vowel by the long one, or in some cases the second short vowel by the first sbort one. Thus we are told that sa'ilun 'asking' (Koran, lxx, 1) was written sālun in the codices of 'Ubayy and Ibn Mas'ūd (Jeffery, Materials, p. 173). The Hudhali 'Abū Dhu'aib (Diwan, vi, 26) uses radun for ra'idun 'scout'. The author of the Lisan (iv. 169) asserts that this was a frequent formation in that dialect. It is likely that some of the participles of the form $q\bar{a}l$ from verbs mediæ hamzatæ and mediæ w/v, which Nöldcke collected (Neue Beiträge, p. 210-15), are to be explained in this way, especially where they are taken from Western texts. Similar forms are occasionally encountered in colloquials, particularly with participles that have lost association with their verbs. Such irregular and facultative contractions are particularly frequent at the end of words, also when followed by pronominal suffixes: hayā for hayā'u 'shame', bahā for bahā'i 'splendour' (the case vowels secured by poetical context), tajī for tajī'u 'she will come', satunbinī for satunbi'unī 'she will tell me', shānīki for shānī'uki 'who hates thee' (Schwarz, Umar, iv, 107-8; further cases, all Western, in Nöldeke, Zur Gramm., p. 6). It seems that with the last two words there were intermediate forms *satunbiyunī and *shāniyuki, which were wrongly analysed into satunbi-uni(iy=i) and shāni-uki, so that in fact here too the longer vowel absorbed the short one. This would offer a possibility to account for bali = baliya (but see § 12w), namely baliya being analysed as bali-a and contracted. Since hamza did not exist in the dialect it did not make any difference whether a given form ever had hamza or not. On the strength of the poetical examples, we should read پستهزي = yastahzi'u 'he mocks' (Koran, ii, 14/15) as yastahzī, etc. This, in fact, is nothing but the same tendency which in common Arabic reduced *al-qadiyu to al-qadi and perhaps *yarmiyu to yarmi, while leaving the open vowel in al-qādiya, yarmiya intact. Schwarz (Umar, iv, 99) claims that the contraction of -iya into -ī is common in Arabic poems—a matter I have not been able to check. It may be remarked than an accentuation like tunbiyuni, shaniyuki, yastahziyu-in fact the position of the stress in the corresponding Hebrew words-would be particularly favourable to such a development. Unfortunately, we have so far no other data enabling us to study the place of the accent in our dialect, as distinct from its nature (on which see § 10 n). Cf. further the form 'adfuhu for 'adfi' ūhu 'warm him' (§ mm below). Ibn 'Athīr (in Tāj, x, 128) calls these contractions irregular (shādhdh) and stresses that the correct pronunciation is with hamzat baina baina. It is obvious that the contractions must have jarred on the ears of an Eastern Arab: they were perhaps the main incentive for the vigour with which the hamza was imposed upon the Koran text.

dd Final -ā'ī was contracted into a diphthong spelled 'alif-yā'. Thus Ibn Kathīr read in Koran, xix, 5 warāy for warā'ī; 22 the Hijazis read in several

places shurakāy for shurakā'ī 'my rivals' (Ihn Khālawaih, Badī', p. 72); the Basrian 'Abū 'Amr read allay for alla'i, the rel. pron. plur. (hut see § 12 i). The diphthongal character of the spelling seems to be the point of a remark in the treatise edited by de Sacy (Notices et Extraits, ix, 67 = Barb, Hamze, p. 35) that the ya' at the end of these words is not the earrier of the hamza. hut a notation for the i. Similar contractions have been noted by Wetzstein in Syrian bedouin colloquials: 'asmāy = 'asmāī' 'iny names', čerāybak = qarā'ibaka 'thy relatives', nāymīn=nā'imīn 'sleepers' (ZDMG, xxii, 170), and also exist in Mishnaic Hebrew, e.g., noy for no'i 'heauty' (from na'eh, formed on the pattern of holi). From words like shuraka', this type of pronominal suffix spread to words ending in 'alif maqsūra written with 'alif. Năfi' read vi, 163/162 mahyāy for mahyāya' my life'23 (Baidāwi; 'Astarābādī, Kāfiya comm., i, 295). It is possible that these forms were the point of departure for the pronominal suffix -yi after long vowels and diphthongs (cf. § 12 d). The only contraction of this type in the middle of the word I have so far found is the reading of Ihn 'Ahbas in lxx, 1, sailun for sa'ilun 'one who asks' (Zamakhsharī, Kashshāf, p. 1525). This way of dealing with the complex a't or a't recurs in other Semitic languages, e.g., Christian Palestinian Aramaie shaylin 'they ask' for sha'ëlin (Nöldeke, ZDMG, xxii, 467), Ethiopic 'aidug for 'a'(e)dug 'ass' (Mittwoch, Tradit. Aussprache, p. 13) and the pronunciation of Hehrew in Eastern Europe: maise for ma'ase מעשה 'story'. Since here ai is clearly the reduction of ay to a normal diphthong, one wonders whether the same change did not affect also those words where -av came to stand in final position, so that in actual fact they sounded warai, shurakai, allai.24 This surmise is further supported by the frequent spelling for shai' 'thing' (GQ, iii, 49). This may have owed its popularity to the desire to ohviate the pronunciation shi,25 hut must have had some roots in accepted spelling standards. In xxi, 35/4, 'afa'in 'if then' is spelled is il. where again the 'alif can only indicate ai. For some reason the spelling 'alif-ya' was also used to express i'a, i'a, and other combinations (GQ, loc. cit.) so that in the end it was dropped altogether. It seems that -a'u was similarly reduced to au, as in Hijazi hidau for hida'u 'kites' (Lisan, i, 47) and hidhau for hidhā'u 'sandal' (Zamakhsharī, Fā'iq, i, 114). Contrary to -ai for -ā'ī, these Hijazi endings could not appear in a spelling hased upon pausal forms; for this reason we also prefer to find another explanation for spellings like معنوا for du'afa'u (cf. § 10 w). Similar contractions appear in Iraqi haula, Spanish haulin for hā'ulā'i 'these' (Brockelmann, GVG, i, 319). Both dialects have Western associations.

ee Contrary to the habit of Koranic orthography of showing only pausal pronunciations, the genitive of words ending in 'alif mamdūda is in some cases written with a $y\bar{a}$ ' (GQ, iii, 46). I do not believe that this represents a mere graphic departure from the norm; then we should expect similar cases

with $w\bar{a}w$ for the nominative, but apart from the doubtful plur. $-\bar{a}'u$ (§ 10 w, 11 dd) these are not forthcoming. It is more probable that the -ai with which these forms ended was taken to be the 'alif maqsūra (ä). The paradigms of nouns in \ddot{a} and in 'alif mamdūda in the dialect ran thus:

'af'ā 'snake': al-af'ai al-af'ai al-af'ai 'inā'un 'vessel': al-inau al-inai al-inā

This partial coincidence made it easy for nouns to pass from one class into the other. Where the Nejd dialects had shira 'bargain', the Hijaz had shira'u (or rather shirau), for milta'u 'pericranium', on the other hand, it said miltai (Wāqidi in Lisān, xx, 114),26 for Tamim zinā'u 'adultery' zinai (Lihyānī in Lisān, xix, 79; Sahāh, ii, 489). In the last case the statements are borne out by the spelling of the Koran, while the Eastern form occurs in lines by Farazdaq and Nābigha al-Ja'dī quoted in the Lisān. On 'ūlā'i, 'ūlai, cf. § 12 i. The confusion became most complete in Tayyi' (cf. § 14 ee). Strangely enough, the same changes and confusions do not apply to nouns ending in -d'(un). Zamakhshari (Mufassal, p. 161) states that the Hijazis pronounce kala'u 'fresh herbage' in pause as kalā in all three cases, while others say kalau for the nominative, kalai for the genitive, and kalā for the accusative. This is fully confirmed by the Koran where al-mala'u (vii. 58/60) 'the nobles', mala'un (xi, 40/38), al-mala'i (ii, 247/246), and al-mala'a (xxviii, 19/20) are all spelled (al-)malä الملا; the same applies to the different forms of naba'un 'report'. All these are, of course, pausal spellings: the actual pronunciation must have been malau, malai, etc. What happened in the case of the nunated form mala'un we have no way of knowing.

ff Though we have so far tried to keep to purely phonetic developments, we have had to mention some analogical formations. These are particularly widespread in the verb, where the attraction of accustomed patterns ('Systemzwang') is greatest and speakers naturally tended to fit the divergent forms into existing verbal classes. Thus from the imperfects yuwakkidu < yu'akkidu, yūṣidu < yu'ṣidu, yūkifu < yu'kifu the w spread into the other parts of the paradigm, so that the Hijazis also said wakkada for 'akkada 'he fastened' (Suyūṭī, Muzhir, ii, 177), 'auṣada for 'āṭada 'he bolted', and 'aukafa for 'ākafa 'he saddled', cf. Hebrew 'ukkāph 'saddle' (Liḥyānī in Lisān, x, 351). Similar w-forms from primæ 'aleph existed in the dialects of Yemen (§ 4 n) and Ṭayyi' (§ 14 r). They are much in evidence in the colloquials (Brockelmann, GVG, i, 590) without our being able to say at present whether these forms were inherited from West-Arabian or newly formed when the colloquials lost the hamza.

gg Instead of sa'altu, the Hijaz dialect formed siltu, etc., after the third person sāla < sa'ala. In the imperf., yasalu derives directly from yas'alu. This seems to have been taken as analogous to yadharu, etc. (Wright, i, 79C), since the imperative was sal, not "isal < is'al. These forms occur in

poetry from all tribes, though they never became as fully established as the hamza-less yarā from ra'ā (Sībawaihi, ii, 175; Nöldeke, Zur Grammatik, p. 6). Only early Christian Arabie MSS. take the further step of fitting the imperfect to the perfect: they write sālū for the plur, imperative (Vollers, Volkssprache, p. 88; Graf, Spraehgebrauch, p. 18).27 This is perhaps not unconnected with the fact that Christian Palestinian Aramaic completely turned this verb into a mediæ w: imperf. yeshol, imperative shol (Nöldeke, ZDMG, xxii, 466; Schulthess, Gramm., p. 66). In the Koran the imperative and imperfect of this verb never have 'alif, but the perfect forms with consonant affixes (sa'altum, sa'altuka, sa'altahum, etc.) are invariably spelled with an 'alif, indicating presumably hamzat baina baina (§ y above). One auspects that the spelling with 'alif is applied so consistently to guard against the vulgar dialect forms siltum, etc. In the colloquials sa'ala is atill largely eonjugated as if the hamza were there (Driver, Grammar, p. 83). We can say nothing about the treatment of other verbs mediæ hamzatæ. 28 No perfect of any med. hamz. of the pattern fa'ala appears in the Koran. The forms of ya'isa 'to despair', where spelled in that way, are not genuine Hijazi. In that dialect the root appeared as 'ayisa, imperf. yayasu, 10th conjugation istāyasa (Ibn Khālawaih, Badī', p. 65). This is confirmed by the spelling of old codices (GQ, iii, 49-50).

hh One must beware of ascribing the confusion of verbs tertiæ hamzatæ with verbs tertiæ infirmæ²9 to the disappearanee of hamza alone. Forms after the pattern of tertiæ yā' from hamzated roots are not uncommon in the work of Eastern poets (Sehwarz, Umar iv, 107; Wright ii, 375-6). Vollers (Volksspraehe, p. 86) gives a long list of roots in which the two classes are eonstantly confused. In the colloquials the two classes eoincide even in regions where hamza is fairly well preserved. Actually, the Hijazis seem to have kept them apart as well as anyone else. The spelling of the Koran, in its own way, keeps them distinct. 'Omar b. 'Abī Rabī'a only substitutes y-forms for hamza-forms in the imperfect (Sehwarz, Umar, iv, 107). Forms like qarātu for qara'tu 'I read' (Zamakhsharī, Mufaṣṣal, p. 165) are Hijazi pronunciations of the normal classical forms (which may have been identical with those of the dialeet).

li Of special interest is the conjugation of $ra^{\lambda}\ddot{a}$ 'to see' and $na^{\lambda}\ddot{a}$ 'to move away'. These verbs apparently lost their hamza before the final $-\ddot{a}$ had become -ai in the dialect (cf. § 12 v) and therefore retained the form $r\bar{a}$, $n\bar{a}$, which is that of Koranie spelling. Verses quoted in Lisān, xix, 3-4 suggest that these forms were also used outside the Hijaz. These forms were drawn into the pattern of the mediæ y and pronounced $r\bar{a}^{\lambda}a$, $n\bar{a}^{\lambda}a$, with hamzat baina baina. The Hijazi character of these forms is proved by their appearance in lines by the Khuza'i Kuthayyir and the Medinean Qais b. al-Khatim, and by the statement of Laith that the only form of $ra^{\lambda}\bar{a}$ with

alleviation of the hamza actually used is rã'a (Lisān, xix, 17), cf. also Nöldeke, Zur Gramm., p. 6. Perhaps we should read the Koranic 1, U (GQ, iii, 39) rā'a and nā'a. The Damascene Ibn 'Amir, often a representative of Hijazi usage, read nā'a in vii, 83. The perfect of this rā'a we would expect to be *ritu, like jitu < ji'tu. Such a form, ritu 'I think', is indeed cited by Laith (Lisan, xix, 17), though without reference to any dialect. In the ensuing discussion it is equated with ru'îtu, and by Tha'ālibî with 'urītu 'I was shown', but most probably is nothing but ra'aitu 'I think'. In old codices spellings like ريم for ra'aitum oceur (GQ, iii, 44), while normalized Koranic orthography, as exhibited in the 'Royal Koran', invariably spells forms with consonantal affixes with medial 'alif, whether they are of the verb ra'ā (e.g., xii, 31, xx, 942, xxxiii, 19, lix, 21) or of 'ara'aita, etc., 'just consider', where only the Hijazis are said to have sounded 'alif (cf. § w above). The Lisan gives some lines of poetry with raitu for ra'aitu, one of them by the Basrian grammarian 'Abū l-'Aswad ad-Du'alī, who hardly intended to write Hijazi dialect. I would suggest reading as raitu, the 'alif being inserted here to guard against the pronunciation rītu, just as it was inserted in sa(a)ltu to prevent the reading siltu (§ gg) and in shai to prevent the pronunciation shī (§ dd). The imperfect was in Hijaz, as everywhere, yarai (forms with hamza are quoted by the lexica, but I have not been able to place them geographically), the imperative ra, fem. rai, dual raya, plur. rau, fem, raina, while the Tamim said ir'a, etc. (Lisan, xix, 5). The imperative na, etc., is given as common Arabic, though some said in'a (Lisan, xx, 171).

kk In view of the general disappearance of hamza in the Hijaz dialect, it seems strange to find attributed to it forms in which a common Arabic, oldinherited ya" or waw was turned into hamza. We are told that the Hijazis said 'abā'a for 'abāya 'cloak', salā'a for salāya 'forehead', sihā'a for sihāya 'capsule', 'azā'a for 'azāya 'a kind of lizard'30 (Ibn Sikkit, Qalb, p. 56), and dha'ā for dhawā 'to wither' (Qālī, in Suyūṭī, Muzhir, i, 30, 274). Further forms of this type are ghazā'a 'tracing of genealogy', siqā'a 'giving of water', istiqā'a 'request for water', istimā'a 'gazelle-hunt' ('Astarābādī, Kāfiya comm., ii, 163). None of these latter forms is attributed to any dialect, nor does any of the authorities quoted in the discussion of this point in Lisan, xix, 302 seq. even consider the possibility of the forms with hamza being dialect. The word siqāya 'giving of water, drinking-vessel' occurs twice in the Koran and is both times spelled with ya", but in ix, 19, some read مقاة, which, though Baidawi takes it as suqah 'givers of water', may in fact be based on an old spelling siga a. The attribution to the Hijaz rests thus entirely on the testimony of Ibn Sikkīt. Vollers is certainly not right in claiming that the hamza is original in these forms (Volkssprache, p. 96), since cognate words, where available, confirm the y; e.g., for 'abāya Hebrew 'abheh 'thick', Ethiopic 'abiy 'big'. Schwarz (ZAss., xxx, 51) thinks

that the hamza represents a two-peak stress. This is no doubt correct, but does nat explain the disappearance of the y. There is a remarkable parallel to this phenomenon in Mishnaie Hebrew, where the elision of hamza was about as camplete as in the Hijaz. In one form of that idiam (it is not clear whether that farm was limited to a region, viz., Babylonia, ar to a period) intervocalie y before the stress became 'aleph, as in hārā'āh for hōrāvāh 'instruction', ramma' uth for rammayuth 'trickery', ha' u for havu 'they were' (Ginsberg, MGWJ, Ixxvii, 416; Porath, ibid., Ixxviii, 306). A similar process seems to exist alsa in Amharie, where the word for 'twenty', written heya, havā, is pronounced ha'ā (Praetarius, Amhar. Spraehe, p. 54). The 'aleph in Mishnaie Hehrew does, of course, nat stand for a glottal stop, but for a hiatus or two-peak stress. This is neatly illustrated hy a spelling in a MS. with Babylonian pointing of Mishnah Berakhoth, v, 2 (HUCA, x, 202). for hödha'ah: a'na. The scribe at first felt this to be hödhah, but in pointing became doubtful and provided two a-signs. In fact he writes the same ward immediately afterwards with an 'aleph. I suggest that these forms are born out of the uncertainty created by a state of language in which hiatus and glide constantly appeared in closely related farms, or even in the same form. Thus the Hijazi dialect had badiya for badi'a 'to approach', and from this formed a new verbal noun, bidāya (Tāj, i, 42). The verbal noun of badi'a was, however, bida'a, Hijazi bida ar bidaa; the two forms are likely to have been used side by side. Perhaps the real point of departure was the forms with a-i, a-u, where either a glide or hamzat baina baina could be pronounced (cf. § bb above), only that we do not hear much af substitution of 'hamza' for y, w in those eases because they had no real representation in spelling. One such case appears to be the reading tara'inna for tarayinna < *tarai-inna 'thou wilt see' (xix, 26). The eolloquials have mostly the Eastern forms with y, but the Syrian bedauins say 'abāh, with suffixes 'abāti, etc. (Wetzstein, ZDMG, xxii, 173), which is the logical development of 'aba'a.

Il After the orthography of the Koran had become fully established, the hamza was introduced into the pronunciatian and finally into the writing of the sacred text under the influence of a Classical Arabic pronunciation based an Eastern speech. While the introduction of the hamza sign was done by grammarians and with ahsalute consistency, the adoption of the hamza in reading-style was by no means consistent, but represents various shades of compromise. No reader pronaunced every hamza; although Hijazi readers on the whole were more inclined to omit the hamza, none of them omitted it everywhere (GQ, iii, 51, n. 1). The introduction of the hamza seems to have met with some apposition. The arguments were, as often, clothed in the farm of hadith. One story asserts that the Prophet rebuked a man, who addressed him as nabī'u llāhi,31 with the words 'do not sereech' (lā tanbir) in

pronouncing my name' (Suyūṭī, 'Itqān, p. 231; cf. Ibn Jinnī, Khaṣā'iṣ, i, 388). Another statement (ibid.) informs us that 'neither the Prophet, nor 'Abū Bakr, nor 'Omar, nor the Caliphs ever sounded the hamza'. As late as the time of al-Mahdī (158-68/775-85) the Kufan grammarian Kisā'ī is said to have drawn upon himself the wrath of the Medinean populace by reciting the Koran with hamza in public service (Taj, iii, 553). There is, however, another version of the story (Yaqut, Irshad, v, 186), that the reason was that he pronounced di'afan (Koran, iv, 10) with 'imāla. It is possible that the term nabra 'screeching', which denotes the full sounding of the hamza, was at first employed by Hijazis as a term of contempt (cf. also ga'yā 'roaring', the older Massoretic term for the secondary stress, Bauer-Leander, Histor. Gramm., p. 155). Those who gave in to the demands of the grammarians advanced similar arguments. A hadith attributed to 'Alī asserts that 'the Koran was revealed in the language of Quraish, who do not sound the hamza. Had not Gabriel revealed the hamza to the Prophet, we would not sound it' (Rāfi'ī, Tārīkh, i, 104). More realistic is a statement attributed to Nafis (d. 169/785), the champion of Hijazi reading and law tradition. When asked about the correct pronunciation of words like birr, dhib (cf. § u above), he replied: 'If the 'arabiyya (i.e., the rules of Classical Arabic) demands a hamza in them, pronounce them with hamza' (Dhahabi, quoted GQ, iii, 139). Sounding the hamza seems to have become a matter of fashion, and considered a feature specific to Koran recitation. The well-known reader, Hamza of Kufa (d. 158/775), himself of the Western tribe of Taim, found it necessary to warn against overdoing hamza and madd (over-lengthening of long vowels) in recitation (Tashköprüzade, quoted by Flügel, Fihrist, ii, 20).

mm This feature of the Hijaz dialect is the subject of many anecdotes, of which we shall mention here only two, because of their special interest. A tradition in the name of 'Abū Bekr tells of a prisoner who was brought before the Prophet, trembling with cold. The Prophet said 'adfi'ūhu 'warm him', but pronounced it 'adfūhu (§ cc above). The soldiers understood this as 'kill him', and did so (Jamhara, i, 74). In another tradition the original linguistic point is spoilt in the version in which we have it (Bukhārī, 'At'ima 1; Qasṭallānī, viii, 210). 'Abū Huraira meets 'Omar in the street 'and I asked him to teach me the reading of a verse (istaqra'tuhu 'āyatan)'. 'Omar takes him in, explains the verse, and lets bim go, but immediately he has left the house he collapses with hunger. In the version of 'Abū Nu'aim, 'Abū Huraira says 'aqri'nī 'teach me some Koran.' No doubt the original point here was that A.H. said 'aqrinī 'give me some food' and Omar understands 'aqrīnī ='aqrī'nī 'teach me'. Similar stories may be hidden behind other hadiths.

nn We learn from Dānī (who was in Mecca in 397/1007) and Ibn Maṭrūḥ (quoted by Bravmann, Materialien, p. 105-6) that the Hijazis velarized the l in the neighbourhood of emphatic consonants. This is called $tafkh\bar{t}m$ $al-l\bar{a}m$. The modern Arabic pronunciation this velarized l is regularly heard in Allāh (cf. Gairdner, Phonetics, p. 19). Since only in the Hijaz \bar{a} in final position had the timbre associated with a near emphatic consonants, we may consider the holy cities the home of this pronunciation. It agrees with this that according to Tha ālibī (quoted by Bravmann) only the Egyptians and Maghribis pronounced the l with $taghl\bar{a}p$ in words other than $All\bar{a}h$.

oo The Hijazi (? dialect or readers) did not assimilate the final *l* of a word to a following *r*, as in hal ra'aita (Sîhawaihi, ii, 67). It is doubtful whether we can draw from this any conclusions concerning the articulation of either sound.

pp In the eighth conjugation of roots beginning with a dh, dh-t are mutually assimilated in the Hijaz into dd. This is the form found in the Koran (muddakir in liv, 15, etc.) and in 'Omar b. 'Abī Rabī'a (xliv, 1). In the 'Asad dialect, on the other hand, this becomes idhdhakara (Ṭabarī, Tafsīr, xxvii, 56; Farrā' on Koran, liv, 15). In the printed Ṭabarī we find Ibn Mas'ūd quoted as saying that the Prophet pronounced idhdhakara; this is a printer's error and is given correctly as iddakara in the Lisān (v, 376). The form dikr 'remembrance' for dhikr is ascribed to the Rabi'a tribes, the northeastern neighbours of 'Asad.' In spite of the Arab philologists, who consider this a wrong re-derivation from iddakara, this is perhaps nothing but an early colloquial form in the mouth of tribes who lived intermingled with an Aramaic-speaking population.

qq The rules for the spelling of the Koran given by Nīsābūri (Gharā'ib, i, 31) decree that in several cases nun before another consonant must not be written. The cases are: linangura 'that we may see' (x, 15/14), fanunjiya 'that we may deliver' (xii, 110), nunji 'we shall deliver' (xxi, 88), lananşuru 'we shall assist' (xl, 54/51). Only fanunjiya and nunji have been found spelled thus in MSS. (GQ, iii, 51). The Kairene 'Royal Koran', founded on the teaching of al-Kharraz (cf. GQ, iii, 273), writes the first fanujiya, with tashdid, the second nuit, with a nun placed above the jim. As the consonant following the nun is in each case a dental or palatal, we may assume that the nun was assimilated to it: linazzura, etc. Schwarz (ZAss., xxx, 48) compares this with a phenomenon described by Zamakhshari (Mufassal, p. 189) as the hidden or alleviated nun. This is mentioned among other products of partial assimilation, such as zh for sh and z for s, and is described as 'a humming in the nasal cavity' (ghunna fi l-khaishūm). The only example given is 'anka 'from thee'. There is little doubt that Zamakhshari is here describing the velar ng (n) in king. The velar nasal has a more pronounced nasal timbre than dental n, and is often in popular works called the 'nasal n'. In modern tajwid the term nun al-ghunna is applied to the palatal n(n) before y, which

is mostly accompanied by strong nasalization of the preceding vowel (Gairdner, Phonetics, p. 56). Schwarz is, however, going too far in identifying the 'hidden nun' simply with nasalization. In consequence of this view he reads , which in a poem by 'Omar appears for the female name Hind, as hid (Umar, iv, 112). That word is much more probably hid, i.e., a pausal form of hiddun, with the n assimilated. On the other hand the superposed n in nuit may really express nazalisation. All these phenomena are not specifically designated as Hijazi. Not so with subul (should we read subbul?) which the author of the Taj (vii, 366) asserts is Hijaz dialect for sunbul 'ears of corn'. However, the Turkish Qamus (ii, 240) quotes from the Raud alunuf of 'Abdarrahman b. 'Abdallah as-Suhaili (d. 581/1185) a statement that 'the Hijazis considered the n in sunbul additional to the root and therefore said in the plur. 'asbāl, while the Tamim said sanābila. The Hamdan said subūla.' This might perhaps he understood to imply that the Hijazis said in the sing. subul. It may be remarked that the Lisan knows nothing of dialect differences with regard to this word.

rr In the second and third persons plural imperfect with the pronoun suffixes -nī and -nā the -na- of the form itself is often elided in texts of Hijazi origin hy haplology, e.g., sa-yafqidūnī for sa-yafqidūnanī 'they will miss me' (Bukhārī, Shahādāt, 15), la-tuṣaddiqunnī for la-tuṣaddiqunnanī 'ye shall believe me' (ibid.), an energicus form. This is frequent in hadīth and sīra (Barth, ZDMG, lix, 165, 642). The only example with the third plural feminine perfect is falainī for falainanī 'they picked my lice' in a line of 'Amr b. Ma'dīkarib (Mufaḍḍaliyyāt, p. 78). Tabrīzī (Ḥamāsa, p. 110) and Mufaḍḍal (loc. cit.) say expressly that this was Hijazi usage. This haplology is frequent in the readings of the Medinean Nāfi' (Fischer, ZDMG, lix, 449).

ss On the other hand the Hijazi Koran readers assimilated the t of the imperfects of the fifth and sixth conjugations with t-prefixes to the first radical, as in taggattalu for tatagattalu, while the Kufan readers in this case read taqattalu with haplology (Tabari, Tafsir, v, 56). It will be noted that both readings are based on the same consonant text. We may assume that the Hijazi reading corresponded to the intention of the scribes who put down the forms, and that therefore the forms themselves are Hijazi dialect, The assimilation presupposes the elision of the vowel of reflexive ta-. which is the rule in the colloquials of the settled population (Brockelmann, GVG, i, 530). In the camel-hedouin dialects of the Shammar and Ruwala, however, the ta- has preserved its vowel: tehedder 'he discarded', imperf. itehedder (Cantineau, Parlers, p. 189, 190). So it has in the central-Arabian colloquials (Socin, Diwan, iii, 155). There are thus two problems: why forms with assimilation appear only after t-suffixes, and why just those modern bedouin colloquials which are in other respects so closely related to West-Arabian, have forms with full ta-, which according to the statement of Tabarī we should assign to the Eastern dialects. A further problem is offered by the forms used by the Kufans. Were these forms with haplology normal in Classical Arabie or the Eastern dialects, or do they merely constitute attempts at reading the Koranic spellings without the offensive assimilation? There is also the problem of al-muddaththir 'he who wraps himself' (lxxiv, 1), for al-mutadaththir. None of the philalngists discussing this suggests that it is dialect, yet it seems to have been felt not to be quite correct. One way out was the non-canonical reading al-mudaththir in the second enalgyation, which changes the meaning. The originality of the fifth conjugation is confirmed by the 'pre-'Othmanic' reading ('Ubayy and 'A'mash) al-mutadaththir (Jeffery, Materials, p. 174).

tt Something like partial haplnlogy seems to exist in the form $ist\bar{a}^c a$ for $istat\bar{a}^c a$ 'to he ahle', said to be Hijazi (Ibn Jinnī, Khaṣā'iṣ, i, 269). The remarkahle thing about this is that the t, not the t, has fallen nut, thus allowing the root to hecome obscured. Ihn Jinnī's statement is all the stranger as in the Koran, which after all we should suppose represented Hijazi usage in this matter, there appears once $ist\bar{a}^c\bar{a}$, with t (xviii, 96/97). According to Baidāwī, some pronounced this $ist\bar{a}^c\bar{a}$. This gives us a key to the problem of $ist\bar{a}^ca$: since s and t could not stand next to each other without some assimilation, the speaker had to choosehetween $ist\bar{a}^ca$, which obscured the formation, and $ist\bar{a}^ca$, which obscured the root. In the discussion of these forms in the Lisān (x, 112 seq.) on one raises the possibility of their heing dialect. Not even the brief quotation from Ibn Jinnī mentions this idea. We can probably dismiss the reading of Hamza az-Zayyāt, $istt\bar{a}^ca$, as a grammarian's invention.

NOTES

i.e. emphatic; c.f. § nn.

² Cf. also the Hebrew habhittim 'flat cakes' (connected with the Arabic root in the Hebrew lexicon of Brown, Driver, and Briggs, s.v.).

Muhammad is said to have used in prayer hail for haul 'power' (Lisan, xiii, 143, 208).

So in the lexica. The other form given there, suwwām, has an u due to the influence of the adjoining consonants (cf. § 10 l).

Farră' (in Lisān, xv, 405) also recognizes sayyāgh as Hijazi dialect, but analyses it as a fai'āl form (saivāgh > sayyāgh) and asserts that the Hijazis use this form 'more than any other' ('ahāu l-Ḥijāzī 'aktharu shai'in qaulan lil-fai'āli min dhawāti th-thalātha). It is not clear to me what this means. The context might imply that fai'āl was used in Hijaz more than fai'ūl, but the example of sawwāgh excludes this.

With all reserve I would like to suggest that this may also explain why South-Arabian qul 'prince' is in Arabic quil. Perhaps qul is quawal 'speaker' (cf. Hebrew naghidh 'prince' from higgidh 'to speak'). In West-Arabian this would have become quyyal. It would still remain to be explained how quyyal became quil, pl. 'aqyal.

- ⁷ To the material found in the comparative grammars, add now also the observation of E. Ullendorff (not yet published), that in Tigrigna there is an increasing tendency to do away with the glottal stop within words, which is beginning to influence the spelling.
- ⁸ One suspects that even the Eastern dialects did not preserve the *hamza* as fully as the grammarians pretend. It is certainly remarkable that none of the colloquials, with all their vigorous enunciation, has done so.
- ⁸ On the difficult Safatene spellings "mr, "sd, ef. Littmann, Safaitic Inscriptiona, p. xiii.
- ¹² Barth (Sprachwiss, Untersuch, ii, 38-42) advances rather weighty arguments against this etymology.
 - 11 I know nf.nn group of this name. Should there be an error for (Qais) 'Ailan?
- 12 According to Ibn Ya'ish (p. 1307) Farra' and Kisa'i permitted this aubstitution in Classical Arabic, so that we may perhaps be entitled to ascribe it to some Eastern dialect. Sihawaihi (ii, 175), though with some doubt, implies however that yasalu for yas'alu was used in the same dialects as siltu (§ gg).
- 12 The same may be true of the Hauran colloquial. The only instances Cantineau (Horan, p. 140) gives for assimilation of post-consonantal hamza, are dannedau' 'light' and fayy, fayye=fai', fai'a 'shadow'.
- ¹⁴ In Aramaie this type of assimilation is not only common in the ettaph'al form= *it'aph'al, but in Jewish Babylonian Aramaic also in the ethpa'al of primæ aleph roots, e.g., ittaggure ittagur 'they profited' (Bab. Talm., Abodah Zarah, 2 b).
- 18 The ta- may be due to association with the verbal noun of the accord conjugation. Maltzan (ZI)MG, xxvii, 245) has however noticed a similar addition of ta- in Yemenite colloquial: terās for rās, etc. I remember having seen cases in the lexica. Perhaps, as most cases seem to involve words beginning with sun-letters, this is nothing but the feminine construct ending of some word placed before it: . . et er-rās>terās (cf. English a napron> an apron). Cf. also Palestinian colloquial talḥamī as gentilic of Bēt (il-)laḥm (Stephen, JPOS, xiii, 235).
 - 12 For intrusive hamza after long vowel (especially with \vec{u}) cf. § 14 r.
 - 17 According to Prof. Ryckmans, this word comes from rwy and means 'offering'.
- 12 In Koran, xviii, 76/77, the Meccans Mujāhid, Ibn 'Abbās, and the Basrian 'Abū 'Amr b. al-'Alā' read la-takhidhta for la-ttakhadhta. The regular form is rejected by Tha'ālibī as contrary to the intention of the text. 'Abū Zaid read la-takhadhta, apparently a compromise (Lisān, v, 6). According to Baiḍāwī it was Ibn Kathīr and the 'two Basrians' who read la-takhidhta. In xviii, 61/60 the 'akīf is written in fa-ttakhadha, and apparently no one read fa-takhidha.
- 12 Such assimilations occur aporadically in cognate languages e.g., Hebrew makköleth < ma'köleth 'food stuff', said to be a loan from Phoenician (Rosenrauch, Revue Biblique, lv. 77).
 - 28 In the Diwan (ed. Kowalski, no. iv, 17) the verse is amended to eliminate rūs.
 - 21 So in iv, 109. The text of the Diwan has bitardband.
- ¹² His qird'a is given hy Zamakhshari as waraya, by Ibn Khalawaih (Badi', p. 83) as wara'i. Both say he read bil-qaşr.
- ²³ It is mahyā, not mahyā, because of the y (§ 10 bb). The possibility of the confusion of 'alif mamdūda and -ā is an additional proof that the latter was in Hijaz not propounced st.
- ²⁴ Perhaps tair 'a bird' in Koran iii, 43/9, where Hamza reads $t\bar{a}$ 'ir, is a similar contraction for the latter. In Sanskrit, \bar{a} and i are in Sandhi contracted to \bar{e} (=ai), not di.

- The 'aish 'what' so common in hadith and colloquials is a perfectly regular form—for the Hijazi dialect. It is 'ai-shī with the I elided in accordance with § 10 gg.
- ¹⁴ The word is first spelled miltā in the Lisān, and immediately after in a quotation, miltā.
 - 17 See note on § q.
- ²⁸ Such an example might be nāsha, yanūshu 'to fetch', as compared with na'asha, yan'ashu, but no one says the former is Hijazi dialect. Farrā' (in Lisān, viii, 254) only suggests that the Hijazis read in xxxiv, 51/52, tanāwushu 'fetching' because they derived it from nāsha, not from na'asha. In any case tanāwushu was also read by the Basrian 'Abū 'Amr and the Kufans.
 - 28 So always in early Christian Arabic (Graf, Sprachgebrauch, p. 19).
 - 30 In Taj, x, 247, the last word is assigned to the 'Aliya dialect.
 - 31 This was not an Eastern form, but one used in Hijaz (cf. § o above).
 - 13 For other versions see Kofler, WZKM, xlvii, 103.
- ²⁸ It is interesting that in colloquials with general tafkhim of consonants it is just *l* that is less subject to tafkhim than others (cf. Cantineau, Horan, p. 107).
 - 24 Cf. also the discussion in Kofler, WZKM, xlvii, 86.
- **Bravmann (Monde Oriental, xxxii, 16) advances a theory according to which haplological ellipsis of a syllable was always preceded by elision of a vowel, e.g., falainani < falainni < falaini. For taqattalu < tataqattalu Bravmann is forced to assume the improbable intermediate stage *ttaqattalu. The development taqqattalu runs altogether counter to his theory. It is not clear to me whether there is any connection between the phenomena here described and the 'great iddighām' (cf. Pretzl, Islamica, vi, 295).

Chapter 12

HIJAZ: MORPHOLOGY

a The independent pronoun of the first singular had in Hijaz the form 'ana in context and 'anā in pause (Suyūţī, Jam', i, 60), as it had in most Arabic dialects (Lisan, xvi, 179). This contrasts with the Tamim dialect (i.e., the Eastern dialects in general?), where 'and was used in context as well (Ibn Mālik, Tashīl, f. 8 b, etc.). Actually, 'anā is found in context in the poetry of Westerners, such as 'Antara, 'A'shā, Ka'b, 'Omar (Nöldeke, Zur Gramm., p. 14). The relation between the two forms is not at all clear. One would expect shortening in the pausal form: the latter would, in the nature of things, be extremely rare. Perhaps these were originally disparate forms.1 Long final a is found in Accadian, Hebrew, Aramaic, Egyptian, short a in Ethiopic. To these two must be added 'ana in the Quda'a dialect (Ibn Mālik, loc. cit.; Ibn Ya'ish, p. 414), in Syrian bedouin dialects (Cantineau, Parlers, p. 70), in Tlemsen, in Malta, in Tigrigna, and in modern Eastern Aramaic. The Mishnaie Hebrew 'ānū 'we' (invariably with qāmēs in poioted MSS.) seems to belong to the same complex. Koranic spelling confirms that the pausal form had long ā in the Hijaz.

b The suffix-pronouns of the third person, -hu, -hum, -huma, and -huma,

did not become -hl, etc., after i and y (cf. § 10 f).

c In the 'Āliya dialect the a of the suffix-pronoun of the second person singular masculine was not elided in pause. While other Arabs said lak 'to thee', 'alaik 'upon thee', fī dārik 'in thy house', the people of the 'Āliya said lakah, 'alaikah, fī dārikah ('Abū Zaid, Nawādir, p. 171). Since the hā' as-saqt often represents a length (pace Birkeland, Pausalformen, p. 31), we may conclude that -ka was long in that dialect, as it was in Massoretic Hebrew. Some Arabs lengthened the vowel of -ka and -ki before further suffixes, as in 'a'taitukāhu 'I gave him to thee' (Sībawaihi, quoted by 'Astarābādī, Kāfiya comm., ii, 11). As often, the older form was here preserved in non-final position. The same distributioo exists in Ethiopic.

d It is possible that the Classical Arabic rule with regard to the suffix of the first singular: -ī after short, -ya after long vowel or diphthong, was not observed in Hijaz. In Koran, xiv, 27/22 the Kufans 'A'mash and Yaḥyā or Ḥamza read mā 'antum bi-muṣrikhiyyi 'you cannot assist me' for muṣrikhiyya (Farrā', quoted Beck, Orientalia, xv, 190; also Zamakhsharī, Kashshāf, p. 704, 849). Bannā' (quoted by Farrā') calls this a dialect form. Farrā' then cites a line (which Zamakbsharī calls shi'r majhūl 'an uotrustworthy poem'): qāla lahā hal laki yā tā fiyyi/qālat lahu mā 'anta bilmardiyyi 'he said to her, you there, do you like me? She answered, you are not the one who pleases me.' 'Astarābādī (Kāfiya comm., i, 295) says this is in the dialect of the

Yarhū', a branch of the Ḥanzala, who belonged to Tamim. However, we shall find that $t\bar{a}$ is a distinctly West-Arabian form of the feminine demonstrative pronoun.³ In a line by the Westerner Nābigha Dhubyānī (i, 4) tradition reads 'alayyi for 'alayya (Suyūṭī, Jam', ii, 53). The two Basrians Ḥasan (Kashshāf, p. 849) and 'Abū 'Amr ('Ushmūnī, ii, 211) read in Koran, xx, 19/18, 'aṣāyi for 'aṣāya 'my staff', where the true West-Arahian reading is 'aṣayya (§ 8 t). The material is really insufficient to decide whether the -yi is West-Arabian or Eastern. The colloquials have largely -yi after long vowels, as in 'ashāyi 'my supper', kursīyi 'my chair' (cf. Driver, Grammar, p. 30). Possibly the whole feature is early colloquial rather than dialect.

e In Hijazi poetry a particle dhī (dhē, cf. § 10 aa at end) could be added to proper names at will and without influencing meaning in any way (Schwarz, Umar, iv, 145). In some cases it would produce grammatically impossible constructions if taken as genitive of dhū 'possessor' (e.g. 'Omar, poem cxxxvii, 2, cclviii, 5).4 According to 'Azharī (in Tāj, x, 436) 'otiose dhū' was common in the speech of Qais and neighbouring trihes. In fact this is probably nothing but the Yemenite demonstrative pronoun dhī (cf. § 7 s), which had become obsolete in Hijaz except with proper names (cf. the occurences with proper names in Zafar and Hebrew, loc. cit.). In normal Hijazi speech it had been replaced by the Eastern dha. As a last remnant of the former dhī we may consider the facts that dhā for hādhā occurs very frequently in hadith, that Hijazi poets often insert other words hetween ha and dhā (Schwarz, Umar, iv, 120), and that the Hijazis used huwa dhā 'there he is' instead of hā huwa dhā ('Anbārī in Lisān, xx, 341)5. In the account of the negotiations at Hudaibiyya (Bukhān, Shurūt, 15), where the dialogue is in a style markedly different from that of the narrative, and therefore presumably has some Hijazi features, we find a most illuminating passage: 'Urwa b. Mas'ud talks to the Prophet, and is interrupted by 'Abu Bakr. He asks man dhā 'who is this?'. Then Mughīra hits him, and he asks again man hādhā 'and who is that now?'. If this can be taken as typical, we obtain a distinction between dhā and hādhā much like that of hādhā and dhāka in Classical Arabic.

f The feminine form of the demonstrative, which was in strict Classical Arabic $h\bar{a}dh\bar{i}$ in context, $h\bar{a}dhih$ in pause, seems to have been borrowed into the Hijazi dialect only in the pausal form $h\bar{a}dhih$, which was here also used in context (Sībawaihi, ii, 314; cf. Birkeland, Pausalformen, p. 94 and Fischer, Islamica, iii, 47). The original West-Arabian form may bave been $t\bar{a}$, still current in the Tayyi' dialect (§ 14 u), or $t\bar{i}$, which appears in the phrase haifa $t\bar{i}hum$ 'how are you there?' used by the Prophet in addressing 'Ā'isha (Bukbārī, $Shah\bar{a}d\bar{a}t$, 15). The inscription of an-Namāra has $ty=t\bar{i}$ or tai. However, $t\bar{a}$ appears also in poems, not only of the Westerner Nābigha, but

also of the Taghlibi Quṭāmī (tālika for tilka; in Diwan, xiii, 28, hādhihi) and of Ku'b al-Ghanawi (hātā for hādhilii), all in Lisān, xx, 341.6

g The plural of the demonstrative pronoun is said to have been 'ūlā in the Tamim dialect, but 'ūlā'i in Hijaz (Ibn 'Aqīl, p. 36 and later comms. on the 'Alfiyya'). The statement of the 'Alfiyya runs: 'use les as a demonstrative pronoun for the plural, but " is better (walmaddu 'aula')'. It seems that Ibn 'Aqil's attribution of 'ūlā'i to the Hijaz is mainly hased on its occurrence in the Koran. There the form is spelled Yel, indicating a pausal form 'ūlā. However, 'ūlā'i in context would have been pronounced in the Hijaz 'ūlay (cf. § 11 dd), and one wonders why the -y disappeared in pause. The spelling let in the Tamim dialect could not be read other than 'ala (§ 10 bb), and is in fact meaningless unless it reflects the spelling of some dialect where final -ai was still pronounced. The cognate forms, Hebrew 'Elleh, etc., all point to a proto-Sensitic' oullai (cf. Barth, Pronominalbildung, p. 119).7 Classical 'ula'i does not fit in with the forms of the cognate languages (Brockelmann, GVG, i, 318). I would suggest that it arose by the same process that produced the Koranic reading (ii, 15/16) ishtara'ū d-dalālata for ishtarau d-dalālata 'they acquired error', i.e., the development of a double-peak stress and breaking up of a diphthong in order to avoid a doubly closed unstressed syllable.8 The Koran reading is said to be according to the usage of the Qais® dialect (Ibn Jinni, Muhtasah, p. 20), and it is quite likely that 'ula'i also arose in that area and thence penetrated into Classical Arabic. We have seen that in the Qais area (Fazāra) final -ai was preserved in pause, but reduced to -ē in context, a process which started most probably before lumzat al-waşl (§ 10 cc). Since 'ulai stood in Arabic normally hefore the article, i.e., hamzat al-waşl, the form used in that position was likely to spread to all positions. That 'ūlai became 'ūlā'i, not 'ūlē, may he due to its having arisen in a part of the Qais area other than Fazara, and that there -ai was treated differently; or contraction and two-peak-stress may have been possible throughout those dialects. 18 Some of the Qais dialects may have had the form ' ūlē, corresponding to the ' ūlā ascribed by Ibn 'Aqīl to the Tamim dialect. It is quite possible that 'ula was used in some Eastern dialects, as Ihn 'Aqīl says. It does not seem to be particularly frequent in poetry from that part of Arabia. In the Hijaz "'ūlai would become 'ūlā (written with 'alif') before hamzat al-waşl (GQ, iii, 36, cf. § 10 bb), and here, as in the Central-Arabian dialects, that form spread to cases where no liamzat al-wasl followed, as in hā 'antum 'ūlā('i) tuhibbūnahum 'those men, ye love them' (iii, 115/119) and in ūlā('i) 'ala' 'atharī (xx, 86/84). It was an easy matter for the Moslem massoretes to turn this 'ülā into the Classical form by adding a hamza sign. A further indication for reading the Koranic spelling 'ula and not 'ula'i seems to me to lie in the fact that it is throughout the Koran spelled with long u ("ishba"). The length of the first syllable is said by 'Astarābādī (Kāfiya comm., ii, 31) to be merely 'a permitted variant'. Zamakhsharī (Mufaṣṣal, p. 56) does not even mention that it can be short or long. In poetry the u is almost invariably short, even with the Hijazi 'Omar (Sehwarz, Umar, iv, 120). The long and short u are not merely accidental variants, but the long u represents an 'Ersatzdehnung' for the double I found in the eognate languages. The 'Eastern' and Hijazi 'ūlai were, of eourse, stressed on the first syllable, but in 'ula'i the stress was drawn on to the long a and the first syllable shortened, as in qital for qītal, (cf. Brockelmann, GVG, i, 76). The \$\vec{u}\$ in the spelling \(^2ula^2i\) (Wright, i, 265B) is thus merely a Koranic reminiscence, but in the Koran it must have represented actual pronunciation, i.e., 'ūlā < 'ūlai. Another form of proto-Semitic' *ullai was used in Hijaz as relative pronoun, cf. § i helow. It goes to confirm our view about the older form of 'ula'i that 'ula'ika 'those' is in good Korans (e.g., the 'Royal Koran') invariably spelled without 'alif, with a consistency that strongly suggests that it was pronounced 'ulaika. In early Christian MSS., where the alif is normally used to indicate long a, this word is mostly written without 'alif (cf. Graf, Sprachgebraueh, p. 16).

h 'Ushmūnī (i, 120) claims that the Hijaz dialect used dhāliha as demonstrative for the remote object, while the Tamim used dhāka. This is apparently based on the observation that the Koran has only dhālika, but does not seem to be correct. A number of the quotations for dhāka collected by Reckendorf (Syntakt. Verhāltn., p. 414-6) eome from Westerners; it also occurs in a line supposed to be in Tayyi' dialect (cf. § 4 t, second quotation). The same 'Ushmūnī (i, 122) also considers hunālika 'there' a Hijazi form, as against the more common hunāka, basing himself again on

the Koran.

i From the evidence we possess it results that the Hijaz dialect used for the relative pronoun of the singular not the Western dhī, dhū (§ 4 aa, 14 v), but the Classical Arabie alladhī, like the Hudhail dialect (§ 8 y). For the feminine plural, however, instead of the various forms appearing in poetry, the Koran employs only a form written (GQ, iii, 32) and pointed alla'i. This corresponds to a Hijazi allay or allai (§ 11 dd); such was the reading of the Basrian 'Abū 'Amr, and of al-Bazzī, rāwī of the Meccan Ibn Kathīr. 'Abū 'Amr (d. 154/771) confirms that this was the way the Quraish pronounced the word. Warsh, rāwī of the Medinean Nāfis, read in lxv, 4, allāyi, apparently a cross between the Hijazi form and the spelling-pronunciation (all from 'Astarabadi, Kafiya comm., ii, 41). There is nothing inherently feminine in the form, and it seems to have served for the masculine as well. The Syrian grammarian 'Akhfash (d. 291/904), rāwī of the Damascene Ibn 'Amir, read in ii, 226 walla'i yu'luna 'and those who forswear' for lilladhina yu'lūna. This allāy, allai, however, seems to be none other than the demonstrative 'ullai used as a relative. The form alla' ūna, aseribed-probably

rightly—to the Hudbail dialect (cf. § 8 z), may be one stage in the transition of the Central West-Arabian dialects from allai to alladhina. Another step of the same transition (not necessarily West-Arabian) can be seen in the forms al-'ula, al-'ula'i for the same, used almost exclusively in poetry (Brockelmann, GVG, i, 324). Here the article was added because it was felt that al- was the first element of alladhi, etc. It appears extremely doubtful to me that al- in alladhi is identical with the article, though this is the opinion both of Barth (Pronominalbidung, p. 157) and of Reckendorf (Syntakt. Verhältn., p. 601). Both find it difficult to account for the element -la-. It seems to me that alladhī cannot be separated from the Hebrew hallāzeh 'this' and the Amharic 'ellazih, 'these'. The latter is clearly 'ella = 'ullai plus *dhīk. The singular and plural forms of the demonstrative are here combined, as in colloquial Arabic hādhōl=hādh-'ūlā. It appears that at some point in the history of Arabic 'ullai came to be used also as a singular relative pronoun. The common colloquial illi, elli, etc., is probably derived directly from it.11 According to the grammarians alla'u ('allau, ef. § 11 ee) could be used in Classical Arabic for the singular. Subsequently this 'ullai was replaced by the synonym alladhi. Perhaps the reason is that (?by contamination with the article) 'ullai had become reduced after vowelending words to llai, lla (cf. la in Mesopotamia, li in Yemen; Brockelmann, loc. cit.), and thus was felt to have too little body. It is possible that at first alladhī was used for singular and plural, like 'ullai (cf. Brockelmann, GVG, ii, 565): the use of alladhi for both numbers in Yemen (§ 4 aa) may possibly (there are other ways of accounting for it) be due to the new form having reached Yemen just at that stage. The extension of the use of 'ullai to the singular and the ensuing developments have nothing to do with the Hijaz dialect. They belong to the dialects on which the Classical language was based. The Central or East-Arabian origin of alladhī is shown by the second a: this was reduced from ā in a dialect where final -ai had become -ā. In the Hijaz, we assume, dhū served for the singular before the arrival of alladhī, and (a)llay, (a)llai for the plural.

k Names and appellatives of the form $fa'\bar{a}li$ were treated as indeclinable in Hijaz, while they were diptote in the East (Sībawaibi, ii, 37; Mubarrad, Kāmil, p. 269). Except for a small part of the Tamim area, however (Ibn Mālik, Tashīl, f. 79 b), those nouns which ended in r were treated as indeclinable in the East, too. 'Astarābādī (Kāfiya comm., i, 46) explains that in $\bar{a}ri$ the \bar{a} had become strongly imalized, l^2 or rather that the r had taken an i-colouring. In any case the exception proves that the diptote flexion of these nouns in the East was secondary and of recent origin. In spite of the similarity of these names to infinitives used as imperatives like nazāli, we are bardly justified in analysing all these names as original commands (cf. Brockelmann, GVG, i, 345), nor can we, as B. also proposes, identify them

with the feminine fa'āl adjective of Arabic and Ethiopic, since this has normal inflection. The variety of objects named or nicknamed with nouns of this form is considerable, including men, women, places, and male and female animals ('Astarābādī, Kāfiya comnı., ii, 78). Vollers (ZAss., xxii, 223) collected a list of place names of this pattern, most of which appear to belong to Yemen and neighbourhood. It is significant that the Arahs considered $fa^{\epsilon} \bar{a} h$ a feminine of $fu^{\epsilon} \bar{a} l$ (cf. § 4 v). The latter, when used in proper names, was diptote, as were names of foreign origin, and was not considered a proper Arabic noun pattern, but substituted (ma'dūl) for the fā'il participle. If we combine this with the appearance of fu'al for fa'il in Yemenite Arabic (§ 4 o) and with the fact that $\int a^{\epsilon} d\bar{k}$ appears in Ethiopic as a masculine participle, we can hardly avoid the conclusion that fa'āli was of Yemenite, or rather South-Arabian origin and identical with Ethiopic fa'ālī, the final vowel being shortened in accordance with § 10 ii. The rather half-hearted specialization of fa'āli for the feminine gender may have taken place under the influence of the existing feminine adjective pattern fa'al.

I Sihawaihi (ii, 39) informs us that the Hijaz dialect treated 'amsi 'yesterday' as an undeclinable particle, while the Eastern dialects declined it. What this came to is shown by the shāhid: they said mudh 'amsu 'since yesterday'. In spite of the statements of grammarians to the contrary, Jauhari (Ṣaḥāḥ, i, 440) is no doubt right in saying that all Arabs declined the word when used with full nominal force. Even the Tamim did not have an accusative 'amsa, though some people treated it as a full diptote (Ibn Mālik, Tashīl, f. 38 a) the 'Uqail even as triptote when used as a noun ('Abū Zaid, Lisān, xx, 340-1). Some Arabs used 'amsa for 'amsi (Ibn Hishām in Tāj, iv, 97). The cognate languages do not help us with regard to the final vowel. It seems that the word was used in different parts of Arabia with different

adverbial endings.

m There is some probability that at least in the dialect of Mecca (i.e., the Tihāma region of Hijaz) the dual had only one form for nominative and oblique cases, as in the northern Yemen (cf. § 7 f seq.). This was tentatively suggested by Ibn Hishām (Mughnī, i, 37) as a solution to the Koranic crux 'inna hādhāmi la-sāhirāmi 'verily these two are sorcerers' (xx, 66/63). The correct oblique dual in -aini is used elsewhere in the Koran, in conformity with Classical usage. In this one passage, however, another dialect peculiarity came into play, the use of the accusative for the predicate of a nominal clause introduced by 'inna (§ 13 m). The dialect form of the sentence would have been 'inna hādhāmi (acc.) la-sāhirāmi (acc.) Mere substitution of literary for dialect forms would have produced: 'inna hādhaimi la-sāhiraini, equally incorrect. A Hijazi speaker wishing to speak correctly had to remind himself not to make the adjustment of -āni to -aini in the second word. Through a psychological process well known to everyone who learns a foreign language,

the author of that reading overshot the mark and refrained from making that adjustment already in the first word, thus producing involuntarily the pure dialect version. Our ascription of oblique -āni to the dialect does not rest on this inference alone. In Bukhārī, 'Ādhān, 145, the Krehl edition reads 'inna rijlayya lā taḥmilāni 'my two feet do not carry me', but 'Abū l-Waqt-usually a stickler for grammatical correctness—and Ibn 'Asākir read 'inna rijlāya (Qasṭallānī, ii, 126). Another tradition is quoted by 'Astarāhādī in the form 'every new-born child is born with the natural religion' ('alā l-fiṭrati') hattā yahūnu 'abāwāhu lladhāni yuhawwidānihi 'au yunaṣṣirānihi 'so that it is his parents that make him a Jew or Christian' (Kāfiya comm., ii, 27). As predicate of kāna we should expect alladhaini (but cf. § 13 n). 'Ushmūnī (i, 71) quotes a tradition lā witrāni fī lailatin 'there are no two witr-prayers in one night' (Musnad Ihn Hanbal, iv, 23, line 21). Here again there should be accusative after generic lā.

n The Khuza'a dialect had lika, etc. instead of laka 'to thee' (Ihn Mālik, Tashīl, f. 56 b). According to Liḥyānī (quoted by Rāfi'ī, Tārikh, i, 144) other dialects used the same form. It is probable that the common Arabic li before nouns was substituted for la-under the influence of bi- (Brockelmann, GVG, i, 495). In some West-Arabian dialects the analogy affected the rest of the paradigm. The Quda'a dialects are reported to have had not only lihi, but also bahu, i.e., complete inversion of the two inflections (Kisā'ī in Ibn Jinnī, Khaṣā'iṣ, i, 395, 411). A ba- before suffixes lies at the back of certain developments in Syrian bedouin and IJaḍarī dialects (Cantineau, Parlers, p. 208), i.e., in the old Quda'a area. It is somewhat improbable, though, that li- and ba- should simply have changed places. Kisā'ī's statement looks rather like a jocular distortion by neighbouring tribes, the truth being cither that the Quda'a said bahu, or that the inflection of the two particles had become mutually assimilated, as in Hebrew (Bauer-Leander, Histor Gramm., p. 636).

o Ihn Duraid (Ishtiqāq, p. 40) states that the Hijazis, contrary to the rule (Wright, i, 58C) formed from fadila 'to be gallant' the imperf. yafdulu. The only other case of this he asserts to be hadira, yahduru 'to be at hand'—which he does not designate as Hijazi. Actually there are several more such verbs (cf. Wright, loc. cit.; Brockelmann, GVG, i, 546; for possible reasons of a phonetic nature cf. G. R. Driver, Problems of the Hebrew Verbal System, p. 64). Sam'ānī (? the Koran commentator, d. 489/1096) referring to a statement of some older grammarians that in actual usage the imperfect of any fa'ila verb may be of the patterns yaf'ilu or yaf'ulu, confirms this, saying that be himself heard such forms from bedouins in Yemen and Hijaz ('Anbārī, Nuzhat al-'alibbā', p. 459). I bave not been able to ascertain whether similar forms are still current in that area. Perhaps the complete absence of any rules for the imperfect vowel in Maghrebine Arabic

(Brockelmann, GVG, i, 547) is to be connected with the large-seale immigration of Hijazi and West-Najdi bedouins into the Maghrib shortly after the time of Sam'ānī. In any case it appears that a tendency which was incipient in the third/ninth century in the West-Arabian area had fully developed in the fifth/eleventh. It was a tendency which had reached considerable proportions in North-Semitic (East and West) at a much earlier date.

p The prefixes of the a-imperfect had in the Hijaz the vowel a. This matter has been fully discussed in § 6 i. We may add here that according to Sībawaihi (ii, 275), Ibn Hishām (Bānat Su'ād, p. 97), and 'Astarābādī (Kāfiya comm., ii, 229) Hijaz was the only region where these prefixes had not the vowel i; however, the statement of 'Abū 'Amr (cf. loc. cit.) is no doubt nearer to the facts. In the canonic readings of the Koran only a-prefixes are found, but among the shādhdh-readings some i-prefixes occur (collected by Vollers, Volkssprache, p. 129). A curious feature of these is that they appear in groups. Thus a number of shādhdh-readings in ii, 33/34 makes up a whole phrase in Tamim dialect: lā tiqrabā hādhī sh-shijra 'do not go near this tree'. In xi, 115/113 two taltala forms occur in one verse: lā tirkanū 'do not incline' and fa-timassukum 'and it will touch you'.

q In the intransitive verbs prime w the w joins in the Hijazi dialect with the a-prefix into au: yaujalu 'he fears', yauja'u 'he feels pain'. The Tamim dialect with its i-prefixes assimilated the w: yījalu, yīja'u. Some Qais dialects (i.e., the Western ones, who had no 'taltala') used a form with lengthening of the a, as if from primæ hamzatæ: yājalu, yāja'u (Sibawaihi, ii, 276; Anbari in Mufaddaliyyat, p. 540; Jamhara, ii, 105). The form of the Qais dialect appears as yālaghāni 'they lap' in the Hijazi poet Ibn Qais ar-Ruqayyāt (lxi, 29)13 and as lā tājal in a variant of Koran, xv, 53 for lā taujal 'fear not'. In a line by a Tamimi poet (Naqa'id, i, 168, line 7) we find fayaija'a 'that he feel pain': this is perhaps a mixed form. Another reading of the same Koran passage has lā tūjal, and some read yūlaghāni in the line by Ibn Qais. These are the forms commonly used in the colloquials both with iand with a-imperfects.14 The u of those forms is hardly a contraction of au,15 but arose in some Eastern dialect other than Tamim, where iu in *yiwjalu became \vec{u} in conformity with § t below. The Qais forms with \vec{a} , again spread over both types of imperfect, are to-day heard in Malta, Iraq, and above all in Najd (Brockelmann, GVG, i, 599).

r In the eighth conjugation of verbs primæ w the standard language assimilates the w to the t, as in ittazara, yattaziru 'to eommit a erime'. In the Hijaz dialect the prefix vowel is said to have been lengthened instead: 'itazara, yātaziru, mūtazir (Mubarrad, Kāmil, p. 100), yātazinu 'he is equal', yāta'idūna 'they threaten each other' (Ibn Jinnī, Khaṣā'iṣ, i, 414). Forms of the eighth conjugation of this class are very few in the Koran. Those that

occur exhibit gemination of the t: ittasaqa 'is full' (lxxxiv, 18) and the frequent ittaqä 'to fear'. One feels that the forms with lengthening in the eighth and the first form ($y\bar{a}jalu$, etc.) were considered unsuitable for literary use. The whole is probably part of the confusion which existed in this dialect between roots primæ hamzatæ and primæ w (cf. § 11 ff).

- s For a discussion of the intransitive perfect of mediæ w/y cf. § 10 y seq. The Hijazi dialect also had $mitn\bar{a}$ for $mutn\bar{a}$ 'we died' ('Abū 'Ubaid, Risāla, p. 155). Most readers follow Hijazi usage. Hafs 'an 'Āṣim (the Egyptian Royal Koran) has mittu, etc., almost everywhere. In xix, 23 the Meccan Ibn Kathīr, the Damascene Ibn 'Āmir, and 'Abū Bakr—just those who normally represent Hijazi tradition—read muttu. Baidāwī cites no variants to i-forms in xxi, 35/34, xxiii, 84/82, xxiii, 37/35. The only examples of u in the $qir\bar{a}$ 'a of Hafs are two occurences of muttum in two successive verses (iii, 151/157 seq.), another instance of Eastern peculiarities coming in batches (cf. § p above). In this particular case the u may also be due to vowel-harmony, which, as we have seen (§ 10 f, seq.) had no place in Hijaz dialect. The Hijazi form is here upheld by the Medinean Nāfi' and the Kufans Ḥamza and Kisā'ī.
- t The forms of the passive perfect mediæ w with vocalic affixes had in preclassical Arabic three forms: sīṭa '(fluids) were whipped together' in Hijaz, süta (kasra bi-'ishmām ad-damma) in the Qais dialects and part of 'Asad, and suta in the dialects of Tamim and of Faq'as and Dabr, reckoned among the fusaha'u bani 'Asad (Ibn Hisham, Banat Su'ad, p. 69).16 Farra' (in Lisan, xiv, 92) only says that the 'Asad said either qīla or qūla for the passive of 'to say'. In the Koran all cases of passive media w are spelled with i (qila, ghida in xi, 46/44, sī'a in xi, 79/77, etc.). Baidāwī records no variants. The Kufan Kisā'ī, however, read in each case ū (GQ, iii, 198). Apparently the Classical language adopted the forms with ü, but with the Hijazi spelling; in the mouth of Easterners and Westerners, who had no u in their own dialects, the spelling-pronunciation won the day. The forms with \vec{u} are considered unclassical (Suyūṭī, Bahja, p. 46). The Hijazi forms agree with Biblical Aramaie fim 'was placed' (Ezra, iv, 19, etc.) and with the doubtful zirti 'I was detested' (?, gloss to 'I was hated') in the Tell Amarna letters (127, 34). The Tamim forms are paralleled by the Hebrew passive participle mūl 'circumcised', etc., 17 and by the odd Biblical Aramaic sumath (Dan., vi, 18), rejected as Hebraism by Bauer-Leander (Gramm. Bibl.-Aram., p. 145). It is thus possible that the two extreme forms are of disparate origin; in this case it would be rather difficult to account for the \bar{u} of the central area. We must, therefore, for the present keep to the old view that suta was developed from *suyita, and \vec{u} became \vec{i} in the West and \vec{u} in the East. By assuming this sound-law we gain an explanation for some other phenomena (§ q above and δ u below).

u The passive participle of the first conjugation of mediæ y takes in the Hijaz dialcet the form madin, in the dialect of Tamim the form madyūn¹⁸ (Ibn Jinni, Muḥtasab, p. 28; id., Mughtaṣah, p. 3, 23; Ibn Mālik, Tashīl, f. 109 a; Ihn Ya'īsh, p. 1419). The Tamim form is that most usual in the colloquials (Brockelmann, GVG, i, 609). The only form of this type in the Koran is mahīl 'heaped up' (lxxiii, 14), where Baidāwī registers no variants. The Hijazi form no douht goes hack to *madūn < *madūn < *madyūn with the same sound-change as in the preceding paragraph. The Central-Arahian dialects may have preserved this madūn, though we hear nothing ahout it. The frequent occurence of madīn and similar forms in Classical Arabie texts suggests that this was so. The Tanīm form need not necessarily be the old Ur-arabisch one, but may be an analogical new-formation for *madūn. This view is supported by the existence of parallel new-formations from mediæ w, such as maqwūd 'led' for maqūd, which are not specifically ascribed to any dialect, hut may he Eastern (Ibn Jinnī, Mughtaṣab, p. 3).

v The third singular masculine perfect of transitive verbs tertize y is spelled like the nouns with 'alif maqsūra (a), which, as we have seen, represents -ai (§ 10 bb). It rhymes with them, both alone and when followed by suffix-pronouns, but never with forms of tertire to. Brockelmann (GVG, i, 619) suggests that both ended in $-\bar{a}$, but the \bar{a} was 'coloured' to agree with the diphthong of the forms with affixes: banuitu, therefore banæ, but ghazautu, therefore ghaza. Such 'colouring' is a phonological impossibility, and would moreover force us to assume that final -ai sometimes stood for -æ. In view of the rhymes we must take it that the form بني was pronounced banai, i.e., that the vocalization of the forms with suffixes was bodily transferred to the third singular. That this was a secondary process can he seen hoth from the feminine banat and from the contracted forms rā 'he saw', nā 'he moved' (§ 11 ii), where the connection with the tertiæ y class was broken before the Proto-Semitie *-a of that class had changed to -ai. It is highly probable that we ought to read the Sabaean (not Minaean) forms with final w and y in the same manner talou, banai. In Ethiopie these were further assimilated to the strong verb as talawa, banaya, but in Tigrigna the older forms are still preserved as talo, bane (Leslau, Documents Tigrigna, p. 117). The same forms as in Hijazi are indicated by the spelling of Safatene, 'atai, banai (Littmann, Safaitie Inser., p. xiv). There, the y disappears before -il in theophorie names, thus indicating an older stage in which these verbs still ended in -a.19 We may thus take it that the -ai forms of the perfect developed at a very early period in 'Proto-Arabic', in West-Arabian, and in South-Arabian. The verbs tertiæ w did not develop in the same manner in West-Arabian, perhaps because ghazau 'he raided' would have given rise to confusion with ghazau 'they raided'. Only in South-Arabian were the verbs tertiæ wāw drawn into the same process.

w In northern Yemen (§ 7 d) and in Tayyi' (§ 14 i) verbs of the type bagiya became bagā. In view of the existence of the same change in Hebrew, we must consider this a common West-Arabian development, though not one common to West-Arabian and Proto-Arabic, as shown by the Safatene fny 'passed away', which can only be read faniya. In all probability the Hijaz dialect also possessed at one time the form baqa. This occurs in a well-attested variant hy Ihn at-Tin to a hadith (Bukhari, Musaqat, 9, cf. Qastallānī, iv, 202) where he reads raqā fnr raqiya 'he went up'. 20 Such forms may have been used in part of Hijaz. In Ilijazi poetry one finds forms of the type bagiya frequently treated as twn syllahles instead of three, but they rhyme with words in -ī (cf. § 10 ll). Such a form may also be 'ukhfī 'is hidden', read by Hamza and Ya'qub in xxxii, 17 for 'ukhfiya; while elsewhere an -a was added to conform with Classical Arabic grammar, the Hijazi dialect form could in this case be justified as the first singular imperfect active. Do we have here the Classical form with the final -a elided as happens in poetry necasionally with the a of accusative and aubjunctive after -i? A case of such elision occurs in a hadith (Bukhārī, Buyūc, 98, Qastallānī, iv, 100) where all except the purist 'Ahū Dharr read ishtaraitu baqaran wa-rā'īha 'I hought some cattle and its shepherd', instead of the expected rā'iyaha. The phonetic explanation, presupposing that the Classical Arabic forms had become current in the Hijaz, ia possibly confirmed by the fact that the feminine active participle of tertiæ y, in the Tayyi' dialect rādātun (§ 14 i) appears in the Koran in ita Classical Arabic form: rādiyatun, etc. (lxxxviii, 9-12), rhyming with other words of the pattern fa ilatun. Yet we must consider the possibility that baqi in the Hijaz was not derived from baqiya, but formed on the analogy of baqitu as banai was on that of banaitu. It may be instructive to tabulate again the different paradigms of the defective verbs in our dialect:

ghazautu First aing. perf.: banaitu baqītu ghazā (ghazō, § 10 r) bagī Third sing. perf.: banai yabqai (§ 10 dd) yaghzū yabn(i) (§ 10 ii)

Imperf.:

x For the passive participle of the verbs tertiæ y we have the curious statement of Farra' (on Koran, xix, 56/55, in the Nuru Osmaniyye MS. only) that instead of mardiyyun one said in Hijaz marduwwun,t hough no one read so in the Koran.

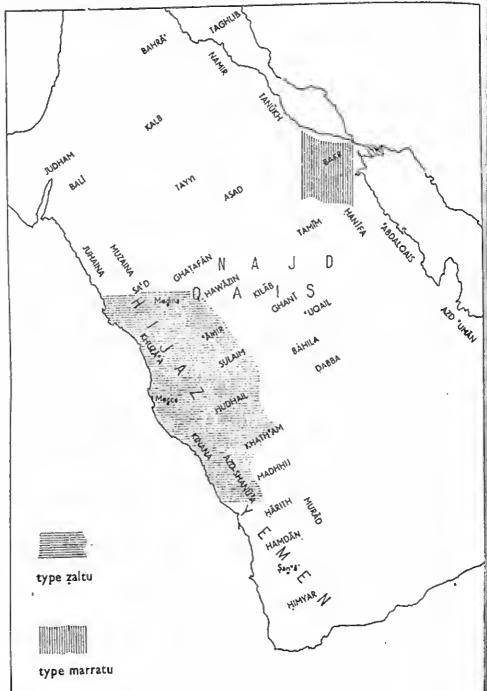

y The imperative and apocopate of verbs mediæ geminatæ were in the Hijaz dialect formed on the pattern of the strong verb, e.g., imlal 'be weary', urdud 'repel' (Sībawaihi, ii, 162; Mubarrad, Kāmil, p. 192). This was so not only in the first conjugation, but also in the third (Ibn Ya'ish, p. 1324) and in the ninth (Ibn Jinnī, Khaṣā'iṣ, i, 269), and presumably in all others. These forms were probably general West-Arabian. In a line by the Hudbali 'Abū

Kabīr, lam yuḥlali 'was not untied' occurs in rbyme, in conformity with the usage of Hijaz (Ḥamāsa, p. 38). Tabrīzī remarks on this 'this is Tamim dialect'. But the Tamim dialect was quite different, as we shall see immediately. This seems to be another case of the confusion between Hudhail and Hanzala; Tabrīzī may have preserved in this garbled form a statement to the effect that the triliteral forms were of the Hudhail dialect. In the East biliteral forms were used everywhere, but the dialects differed with regard to the final vowel. This was at first neutral (2), being merely there to avoid the meeting of three consonants. In 'Asad and part of Tamim it was heard as a when followed by hamzat al-wasl, as i otherwise (Sīhawaihi, ii, 162). The Qais dialects of Ghani, Ka'b, and 'Uqail had invariahly -i: firri, malli, ruddi (Sibawaihi, loc. cit.; Zamakhshari, Mufaşşal, p. 168). Some Tamimis harmonized the neutral vowel with the stem-vowel: firri, malla, ruddu (Sibawaihi). There is a great deal of contradiction in statements made by other authors, which need not be discussed here. The important point is that Eastern Arabic said firr(2), West-Arabian (i)frir. The West-Arabian usage is quite isolated. Those of the cognate languages which possess triliteral forms for the imperfect of the med. gem. use these also for the indicative. Mehri, which has both types, uses the uncontracted forms for the indicative,21 the contracted ones in the form which corresponds to the Arabic apocopate. The occurrence of the various forms in literature gives little support to their assignation to West and East. In the Koran we have yartadid (ii, 214/217) but also yartadda (v, 59/54) 'he revolts'; yushāqiqi llāha (viii, 13), but also yushāqqi llāha (lix, 4) 'sets himself against God'. To none of these have I found any variants. In ii, 282, Hafs reads la yudarra 'let him not be harmed', but a formidable array of early Hijazi readers: 'Umar, Fath, Ibn 'Abbas, Ibn Mas'ūd, 'Aban b. 'Uthman, 'Ikrima, Dahhak, 'Ubayy, but also the Basrian Hasan, are quoted in support of the reading $l\bar{a}$ yudārar (Zamaksharī, Kashshāf, p. 184; Jeffery, Materials, p. 30, 121). We shall hardly follow the opinion of Ibn Mālik (quoted Suyūṭī, 'Itqān, p. 314) who concluded from the existence of both types in the Koran that the Holy Book was revealed partly in the dialect of Hijaz and partly in that of Tamim. The same mixture of forms is found in the poems of 'Omar b. 'Abi Rabi'a (Schwarz, Umar, iv, 124), but also in Eastern poets. In poets, both Eastern and Western, there are also to be found uncontracted forms of the indicative which remind one of South-Arabian, Ethiopic, or Accadian. It appears, therefore, that both ways of forming the imperative and apoeopate must have been current together over a part of Arabia and were inherited simultaneously by Classical Arabic. It may be right that towards the edges of the Arab peninsula there lay areas where the one or the other was preferred or even used exclusively.

z Ibn Mālik (Tashīl, f. 90 b) claims that halumma 'come on!', when used

by the Hijazis in that form, was an exception to the usage of their dialect. We shall hardly agree with that, as we do not analyse the word as $h\bar{a}$ plus the imperative of an imaginary verb lamma. Ibn Jinnī (Khaṣā'iṣ, i, 173) goes so far as to suggest that originally the word was ulmum in the Hijaz. While these are grammarians' fancies, it is interesting to note that the Tamim and the rest of Nejd inflected this original interjection like an imperative (Sībawaihi, quoted Lisān, xvi, 101), i.e., said halummī to a woman, halummū to several people, and halmumna (according to Farrā', in 'Astarābādī, Kāfiya comm., ii, 73: halummanna or halummīna) to several women. According to Ibn Sikkīt and Laith (Lisān, loc. cit.) only the Banū Sa'd (b. Tamim, not the Sa'd b. Bakr near Medina) inflected halumma. We may take it that the Hijaz dialect did not inflect halumma. In Koran, vi, 151/150 and xxxiii, 18, halumma is addressed to several persons. No variants are cited by Baiḍāwī.

aa In the dialect of Sulaim, on the confines of Hijaz, the endings of the perfect of mediæ geminatæ verhs were affixed to a biliteral hase. (Ibn Mālik, Tashil, f. 90 b). Examples of this are given by other sources, as ziltu for zaliltu 'I did all day' (Mişbāḥ, p. 1062) and 'ahabtu for 'ahbabtu (Lihyānī in Lisan, i, 281). Ibn Mālik appears to imply that the dialect of Hijaz proper used triliteral forms, but the Misbah attributes ziltu to Hijaz and zaltu to the dialect of the 'Amir, the neighbours of Sulaim (the latter also in a line hy an 'Azdī, cf. § 6 h beginning). In the Koran we find only biliteral forms of zalla. The canonical readers read these with a: zalta (xx, 97) and zaltum (lvi, 65). Ibn Mas'ūd, Yahyā b. Ya'mar, and Qatāda read zilta; 'Ahū Haiwa and perhaps Ibn Mas'ud ziltum. Only 'Ubayy read zaliltu, only Jahdari zaliltum (Jeffery, Materials, pp. 61, 97, 147). Of other geminate verbs of the pattern fa'ila, such as hassa 'to feel', massa 'to touch', there are no relevant forms in the Koran. Of fa'ala verbs there are only triliteral forms, e.g., shaqaqnā 'we split' (lxxx, 26), madadnā 'we stretched' (xv, 19), apparently without biliteral variants. The material is too scarce for any conclusions. Biliteral forms seem to have enjoyed further extension in Central Arabia. The 'Uqail, who often appear together with the Qais tribes Ghanī and Kilāb, are said to have used ziltu in poetry, though it was not of their dialect ('Abū Zaid, quoted by Ibn Jinnī, Khaṣā'iṣ, i, 387). In the east, the Bakr dialect had a different type of biliteral form, with a vowel intervening between stem and ending, raddatu 'I gave hack', marrana 'we passed' (Sībawaihi, ii, 164).22 The a possibly denotes here no more than a neutral glide-vowel: marranā. Once this vowel existed it gave rise to a tendency towards fitting the verbs into a vowel-ending scheme. Some Arabs said raddātu (Astarābādī, Kāfiya comm., ii, 73). This and the form raddaitu, which is fully assimilated to the tertiæ infirmæ, are the patterns used in the colloquials (Brockelmann, GVG, i, 634).23 Cf. also map No. 16.

NOTES

- In older Syriac we find qāṭelnā < qāṭel ānā 'I kill', but qālēn < qālē ānā 'I roast', with the two forms distributed according to a purely rhythmical principle.
- ^a In the consonant text of the Bible the suffix -kā often has a final h. One wonders whether this is not related to the hā' as-saqt in the Arabic form just discussed. Between 300 B.C. and 700 A.D. a form -ah persistently appears in Hebrew (cf. Kahle, Geniza, p. 100), pointing perhaps to a dialect difference within Hebrew, since -kā reappears in the Tiberian tradition.
 - 4 Cf., however, § x.
 - 4 As recorded in 'Aghānī viü. 141; the Diwan reads bilmamrūkhi.
- ⁶ Ḥarīrī (Durra, p. 49) reports this as an Iraqi vulgarism. One 'Abū Bakr (Lisān, loc. cit., thinks 'Anbārī must have made a mistake. The full correct plural form appears Koran, iii, 115/9.
- In a strry describing pre-Islamic customs at Medina, however, dhih is used for the feminine (Bukhārī, ¿Iarth, 12).
 - [†] Barth writes ullä, as he believed 'alif maqsūra to have been pronounced ≥.
- ³ The hamza is, of course, hamzat baina baina (§ 11 y). Such a hamza for intervocalic w or y is not infrequent in Classical Arabic, e.g., qā'ūl 'garrulous' (root qwl), qā'im 'standing', etc. Cf. § 11 kh.
- ^o More precisely, Ghani. That dialect is said to have replaced most verbs tertiæ to/y by tertiæ hamz. This process must have started from the third pl. perf.—if the whole statement is not an unwarranted generalization from that form. Farrā' (in Lisān, i, 10) calls this hamzat at-tawahhum, 'hamza through false analogy'.
- ¹⁰ The 'Uqail dialect is said to have used hā'ulā'in (Lane, p. 947 b). This may be another attempt to have a form that could stand both before single consonant and hamzat al-waşl.
- ¹¹ Barth thought illi arose from alladhī by attrition (Zerreibung). No auch process is proved for Arabic; and Barth's idea was rightly rejected by such eminent dialect experts as Kampffmeyer and Oestrup (cf. Brockelmann, GVG, i, 324).
- 12 The r-phoneme is almost entirely isolated in the phonological system of Arabie (cf. Cantineau, BSL, xliii, 122). This may partly account for its phonetic peculiarities, especially the absorption of vowel-colouring, which is also evident in pausal phenomena (cf. also Pretzl, Islamica, vi, 323).
 - 14 Also ascribed to the Ta'ī poet 'Abû Zubaid (cf. Kofler, WZKM, xlvii, 128).
- 14 The vocalization of the imperfect forms of primæ w in modern colloquials is a very complicated subject. Frequently several forms are used side by side in one locality (Cantineau, Horân, p. 234). Perhaps in ancient Arabia, too, several forms co-existed in some dialects.
- 16 Cases of au becoming \bar{u} are rare outside the Maghrib (Brockelmann, GVG, i, 191). Ibn Mālik (Tashil, f. 108 b) attributes the change of initial 'au>' \bar{u} , as in ' \bar{u} lād <'culād'children', to the Tamīm dialect. This would not affect our case, as the Tamīm said in any case ' \bar{y} alu <*'iwjalu.
- 16 Kosser (WZKM, xlviii, 73, without indication of source) claims that \bar{u} was used in the dialects of Dubair, Faq'as, Hudhail, Dabba, and some Tamim, \bar{u} by some Qais and most 'Asad. The form $b\bar{u}'a$ 'was sold' occurs in a line by the Tamimi Ru'ba (Appendix, xiv, 3), as reported by Kisā'i (in Suyūṭī, Sh. ah. al-Mughnī, p. 277) and Ibn 'A'rābī (Ibn Ya'īsh, p. 976). The Diwan has $b\bar{z}'a$.
- ¹⁷ Brockelmann (GVG, i, 613), and more cautiously Bauer-Leander (Hist. Gramm., p. 393) explain this as contraction of *mawūl. It seems more natural to take it as a participle assimilated to the perfect, like mēth.

- ¹⁹ It is, however, also found in a line by the Westerner 'Abbās b. Mirdās of Sulaim (quoted Howell, iv, 1503).
- 19 Littmann thinks that verbs tertiæ w became tertiæ y in Safstene, as in Hebrew. The only instance is ngy 'he escaped', which is intransitive and may therefore have been *nagiwa, which became *nagiwa through purely phonetical causes.
- ²⁰ Another case may be the early Christian Arabic ghashā=ghashiya (Graf, Sprachgebrauch, p. 9).
- ²¹ Such forms are found in Classical poetry (Wright, ii, 378, Ibn 'Athīr in Lisān, vi, 232). In the Lisān a hadith is quoted where the Caliph 'Omar says ya'ruruka for ya'urruka'it affects thee'. This form may be due to the phonetic peculiarities of r.
- "Sic, not marrana (as Brockelmann writes GVG, i, 633). Similar forms appear in early Christian Arabic: احبنا , (Graf, Sprachgebrauch, p. 17). In view of the Bakri forms we should read waddat(u), 'aliabbana, and not waddet, 'aliabbena, which would in all probability have been spelled with y.
- ²³ According to Tāj, vii, 411, the Tamim said *dililtu* for *daliltu*, with vowel-harmony (§ 10 f). This at any rate suggests that the Tamim dialect used triliteral forms. It is doubtful whether the statement is reliable, as it gives triliteral forms also for Najd and Hijaz.

Chapter 13

HIJAZ: SYNTAX

a According to a statement by al-Yazidi (quoted by Suyūţi, Muzhir, ii, 177) the words tamr 'dates', burr 'wheat', sha'ir 'barley', busr 'fresh dates' were feminine in the Hijaz dialect, masculine with the Tamim. All these words are accepted in the Lisan as masculines, without any mention of their being feminine anywhere. In a line by the Hudhali al-Mutanakhkbil (ii, 1), burr appears with a masculine adjective secured by the rhyme. According to 'Akhfash (in Lisan, xii, 9) the words tariq 'way', sirāt 'road', sabīl 'path', sūg 'bazaar', zugāg 'lane', kallā' 'sheltered bay' (name of the sūg of Basra) were feminine in Hijaz and masculine in Tamim. In the Koran tarig bas a masculine adjective in xlvi, 29/30, sirāt in numerous passages, sabīl in xv, 76. According to Farra, the name of the measure sāc was feminine in the Hijaz dialect, masculine in 'Asad and Najd, but some 'Asadis used the feminine (Misbāh, s.v.). The related suwā' 'cup' in Koran, xii, 72 is masculine. In a note on the margin of Mubarrad's Kāmil (p. 666, Leyden MS.) Ibn Sikkīt is quoted as saying that 'unuq 'neck' is feminine in Hijaz and masculine in the 'Asad dialect.1 The Mişbāh (p. 1087) quotes Sijistānī as saying that the word is generally ('aghlab) treated as masculine. The same ('Addad, p. 75) says that nakhl 'palm trees' was feminine in Hijaz, masculine everywhere else. In the Koran nakhl is feminine, but in liv, 20 masculine in rhyme. Ibn Mālik (Tashīl, f. 88 b) says that in the Hijaz all collective nouns with nomina unitatis in -atun, such as tamr, were treated as feminines, in the Tamim and Najd dialects as masculines. However, Astarābādī (Kāfiya comm., ii, 162) says that such nouns were masculine in Hijaz, feminine everywhere else. This is certainly not right, and may be a mere copyist's error. The general trend of the evidence is that certain classes of words were still feminine in Hijaz, but in the East and in Classical Arabic, therefore partly also in the language of the Koran, bad followed the pull of the tendency to make gender conform with pattern. The evidence of the cognate languages only partly supports the view that the Hijazi usage is more conservative. Hebrew tāmār 'date' is feminine in Mishnaic usage (cf. Mishnah, Tebul Yom, iii, 6), though Hebrew boser, Syriac besrē 'sour grapes' are masculine; Hebrew śĕ' orāh, 'barley', like Syriac tamrěthá, may be nomina unitatis. Hebrew derekh 'way' is masculine and feminine, shěbhīl 'path' and shūq 'market' are masculine in Mishnaic Hebrew and Aramaic. For 'unuq we may compare Jewish Palestinian Aramaic 'ungëtha 'neck', and perhaps the feminine Syriac 'ĕnāqā 'sucker, branch'. Hebrew nahal, Syriac nahlā 'valley, gorge' are masculine. Some of the Hijazi words may have become feminine because partly synonymous with words originally feminine, but this in itself would bear witness to the strength of the feminine character in these words not outwardly marked as such.²

b Sibawaihi (i, 4, 202-3) repeatedly condemns the error of making the predicate of a verhal clause agree in number with a plural subject (the lughat 'akalūni l-barāghīth, Wright, ii, 294C). He admits, however, that 'some Arabs' spoke thus. 'Astarābādī (Kāfiya comm., i, 88) regards it as a dialect feature, but does not specify which dialect. However, Saffar (quoted by Ibn 'Aqīl, p. 121) ascribes it to the Hudhail dialect, and Khafājī (comm., on the Durra, p. 152) to the dialect of Tayyi' (cf. § 7 wand 14 hh). The instances of this construction which were collected by Nöldeke (Zur Gramm., p. 78), Brockelmann (GVG, ii, 174) and Reckendorf (Syntax, p. 25) are largely from Hijazi sources. It is very interesting that the one known occurrence of it in the poetry of Farazdaq (lxi, 5) is in a lampoon against the Dabba. Farazdaq occasionally uses features of his opponents' dialects to ridicule them; thus it is possible that the Dahba dialect observed the same rule of agreement. This dialect was not of the West-Arabian group. Since the agreement with regard to number is the normal procedure of the cognate languages and of the colloquials, it seems as if the strict observance of the rule that the verb of a verbal sentence must be in the singular was a peculiarity of those dialects that formed the base of Classical Arabic.

c The Hijazis said mabrūran ma'jūran 'may your action be accepted and rewarded' while the Tamim dialect used the nominative (Lisān, v, 117). The Tamim also said bu'dun lahu wa-suhqun 'may he be far removed and destroyed' instead of the common bu'dan lahu (Tāj, ii, 303; not in Lisān). The exclamatory accusative and nominative alternate a good deal in Arabic idioms, and perhaps these instances (if at all correct) are nothing but local fixations of floating usage; but they may conceal basic differences in case

usage unknown to us.

d Numerals from 3 to 10, when employed as appositions with suffix-pronouns appended, were in the Hijaz in the accusative, in Tamīm in the case of the nouns to which they belonged, e.g., 'ataunī thalāthatahum' they came to me, the three of them', in Tamīm thalāthatuhum (Sībawaihi, i, 157; Ṣaḥāb, i, 130, etc.). No instances of this seem to occur in the Koran. The Arab philologists analysed the Hijazi accusative, in accordance with their system, as a hāl (Wright, ii, 116D). We should rather take it as an attributive accusative (cf. Reckendorf, Syntax, p. 114). It is doubtful whether we can conclude from this one construction that the attributive accusative was more alive in the Hijaz than elsewhere.

e Under conditions which we shall investigate in the next sections the sentence-particles 'inna, 'anna, etc. could appear in the 'alleviated' (mukhaffafa) forms 'in, 'an. Thereby they lose their rection and their ism

will appear not in the accusative, but in the nominative. Some Arabs, however, put the ism in the accusative with the alleviated forms (Sibawaihi, i, 244, on the authority of 'one whom we trust'; Ibn Jinnī in Lisān, xvi, 175; Zamakhshari, Mufassal, p. 137). The Kufan grammarians denied that this was possible (Ibn Hisham, Mughni, i, 22), but Farra' admitted pronominal suffixes after the alleviated forms (Taj, ix, 128). Laith (Lisan, loc.c it.) asserts that in the usage of Hijaz the accusative could be employed after the alleviated forms. In the nature of things, as the ism of 'inna, etc., will hardly ever appear in rhyme, it is difficult to prove or disprove this. In the Koran alleviated 'in appears before substantives only in the phrase 'in hull' an (kullu nafsin) $lam(m)\bar{a}(n)$, which from the context seems to mean something like 'verily all together'; the commentators' views about it differ considerably (cf. also § 8 ee), but most take here 'in as alleviated 'inna. Perhaps the phrase was a dialect idiom. It runs 'in hullu(n) in xxxvi, 32/31 and 1xxxvi, 4, in each case without variants reading accusative. In xi, 113/111 most readers have nominative, but the Hijazi readers had kullan.3 The poetical examples with suffix pronouns suggest that the accusative was used after the alleviated forms. These are: a line with lau 'anki = lau 'annaki 'if thou' (Zamakhshari, Mufassal, p. 138); one containing twice 'anka 'that thou' by the Hudhaliyya 'Amra bint 'Ajlan (Diwan Hudhail, exii, 174); one with 'inkah = 'innaka 'behold thou' hy the 'Asadi al-'Uqaishir (Ibn Qutaiba, Shi'r, p. 354, line 3). The 'in is here associated with the long a in $-k\bar{a}$ which forms a feature of the 'Aliya dialect (§ 12 c). The only clear case of a noun in accusative with 'in that I have so far found, however, comes from a Western source, namely a hadith. In Bukhāri, Hiba, 6, the version of Yūnini reads 'in nisā'aka yanshudnaka llāha 'behold, thy wives adjure thee by God'. The spelling can only he read as accusative. Qastallanı (iv, 341) seems to have had some doubts about this construction as he finds it necessary to point out that this indeed is the text of that version (laisa fihā ghairuha).

f Admittedly this is hardly enough to prove the truth of Laith's statement. However, it may well be that its real meaning is that the alleviated forms as such were at home in the Hijaz, where they were employed with their full rection. Indeed, elsewhere they may not have been used at all or with wrong rection (cf. the ease of $m\vec{a}$, § l below): the restrictions placed upon them by the Kufan grammarians may have been of a purely theoretical nature. To decide this it is necessary to examine the cases in which these alleviated forms are used. As far as I know, no rule has ever been given. It would be strange if 'in and 'an, which normally had functions of their own, could at the whim of the speaker have replaced 'inna and 'anna. We must of course beware of drawing into our discussions those cases in which conditional 'in was followed by la- and was for that reason mechanically analysed as alleviated 'in. Zamakhshari (Mufaṣṣal, p. 138) does this in two Koran

passages (xii, 3; vii, 100/102) where the context definitely demands 'if'. There are borderline cases where one cannot decide whether 'in is 'behold', 'if', or 'not', as the line of the 'Asadī 'Abīd (i, 4): 'in buddilat 'ahluhā wuhūshan' 'verily/if its inhabitants have been ehanged for wild beasts', or that of 'Ātika bint Zaid of 'Adī:' in qatalta la-Musliman/wajabat 'alaika 'uqūbatu l-muta' ammidi 'verily/if thou hast killed Muslim, thou must pay the fine of the intentional killer'. It is not without good reason that Ibn Mālik ('Alfiyya 191; ef. 'Ushmūnī, i, 229) insists that where there is no la-, 'in must have a qarīna, a word in the context to clarify its function. If we ignore such eases, we can come to some definite conclusions about 'in, etc.: they can stand not only for the 'full' forms alone, but also for the full forms with pronominal suffixes, especially the danūr ash-sha'n (so already Ibn Mālik, 'Alfiyya, 193) before k and other velars, before n, and before negations (or before l). The following instances could probably be much augmented.

g Before k: 'in kidta ='innaka kidta 'thou nearly didst' (Koran, xxxvii, 54/56); 'an kullu ='anna kulla (Khansā', p. 77, line 8); bi-'an kullu = bi-'anna kulla (Ḥassān b. Thābit, p. 99, line 12); 'an kilānā ='anna kilainā ('Amr b. Jābir al-Ḥanafī, Ḥamāsa of Buḥturī, photogr. ed., p. 32, line 5); ka-'an kashḥun =ka-'anna kashḥan (Nābigha al-Ja'dī, Jamharat 'ash'ār al-'arab, p. 146, line 3 from end); 'an kullu ='anna kulla ('Abū Ṭālib in Ibn Ḥishām, Sīra, p. 249, line 15); 'in kāna ='innahu kāna (Ibn Sa'd IIB, p. 13, line 12, p. 41, line 7; IVA, 45, line 25; the Caliph 'Omar in 'Aghānī, ix, 146, line 3 from end; 'Ā'isba in Bukhārī Ṣaum, 24; 'Uthmān in Bukhārī, Faḍā'il 13); 'in kunnā ='innanā kunnā (Ka'b b. Zuhair in 'Aghānī, ix, 146); 'in kādat ='innahā kādat (Mu'āwiya b. Miḥsan al-Kindī in Ṭabarī, Annales, i, 1019, line 5); 'in kuntu ='innī kuntu (Ibn Sa'd IIB, p. 130, line 16); the three examples with suffix pronouns in the last section.

Before other velars and j: ka-'an jadwalun (the 'Asadī 'Abīd, ix, 3); 'an jurḥun='anna jurḥan (the 'Absī Dubai'a in 'Āmir, ed. Lyall, xxxiva, 5); bi-'an qaumukum=bi-'anna qaumakum (Mufaḍḍaliyyāt, ix, 30); ka-'an gharbun=ka-'anna gharban (the Tamimi 'Alqama, Ahlwardt, Six Poets, xiii, 8); ka-'an qabasun=ka-'anna qabasan (the Tamimi Mujamma' b. Hilāl, Hamāsa, p. 344). Before qad with perfeet, 'an frequently stands for 'annahu (Reekendorf, Syntax, p. 126). In Koran, xxiv, 7 and 9, for 'anna la'nata... 'anna ghaḍaba, Nāfi' and the Basrian Ya'qūb read 'an la'natu, and Nāfi' 'an ghaḍiba llāhu='annahu ghaḍiba.

We may add bere that, though the Kufans did not allow accusative after the alleviated forms, 'Akhfash and the Kufans permitted against the opinion of the Basrian⁵ phrases such as 'in qāma la-Zaidun and 'in qa'ada la-Zaidun 'behold it was Zaid who stood up', 'behold it was Zaid who sat' ('Ushmūnī, i, 230). There is nothing remarkable in the choice of the first example, but it is unusual for Arab grammarians to give a second example unless this adds

something significant to the first. In this case it is certainly odd that the second example should also bave a verb beginning with qāf. Perhaps this is some dim recollection of a Kufan statement permitting 'in for 'innahu before uvulars.

h Before n: the instance from Bukhārī in § e at end (Hiba, 6), and 'in naṣunnuka ='innanā naṣunnuka (Koran, xxvi, 186). Before l: the Koranie reading 'an la'natu, cf. preeeding paragraph (xxiv, 7); wa-'an lawi staqāmu la-'asqaināhum = wa-'annanā (Koran, lxxii, 16); 'an lau nashā'u = 'annanā (Koran, vii, 98/100). Ibn Mālik ('Alfiyya, 195) says wa-qalīlun dhihru lau, whieb I take to mean that 'alleviated 'an but rarely occurs before lau. 'Ushmūnī (i, 231), however, says it means that the grammarians rarely mention lau in this connection, although he asserts it is frequently found with alleviated 'an in the speech of the Arabs.

Before negations: ha'an lam (Koran, x, 25/24; Ibn Waqqāş of Ḥārith, quoted Howell, iv, 1577); 'an laisa (Koran, liii, 40/39); 'an lan (Koran, xc, 5); 'an with generie lā (Ḥārith b. Wa'la of Dbuhl, Ḥamāsa, p. 97; Ḥuraith b. Jābir of Tamīm, Ḥamāsa, p. 182; Ṭarafa of Bakr, ed. Ahlwardt, xiii, 16); 'an with adverbial lā ('Abū Miḥjan of Thaqīf, ed. Landberg, p. 72). Mention must also be made of the extremely common 'allā, which stands as often for 'anna lā and 'annahu lā as for 'an lā. For mā I have found only one instance: 'an mā lanā dhanbun 'that we have no guilt' ('Omar b. 'Abī Rabī'a, ccxii, 5). This makes it look as if the essential element here is the initial l, not the negation.

In a class by themselves are the cases where 'an is followed by a quotation, as in 'ākhiru da'wähum 'ani l-ḥamdu li-llāhi 'their last ery is: praise be to God' (Koran, x, 11/10), similarly Koran, iv, 139/140; xxvii, 8. Other cases defy elassification: 'an hālikun kullu (by the Bāhilī 'A'shā, Sibawaihi, i, 243); 'an 'udhnā='anna 'udhnai (the Tamimi Farazdaq, Naqā'id, li, 658; 'an 'amintu and 'an tahbiṭīna, (both by the Hijazi Qāsim b. Ma'n, 'Ainī, Maqāṣid, ii, 297); 'ini llāhu (Yaḥyā b. Naufal al-Yamanī in Ibn Qutaiba, Sbi'r, p. 465, line 16); 'ini l-ḥaqqu (anon., 'Usbmūnī, i, 229), 'in Mālikun (anon., ibid.); 'an yu'ammalūna (anon., 'Ainī, ii, 294); 'in yakādu (Koran, lxviii, 51) and the proverb 'in tazīnuka la-nafsuka wa-'in tashīnuka la-hiyah 'it is thine own soul that makes thee beautiful and it that makes thee ugly' (Zamakhsharī, Mufaṣṣal, p. 138; perhaps one should read 'illā for la-, and ya-). In some of these 'in and 'an may not be the alleviated particles.

i To explain this distribution of the alleviated forms, we may start out by accepting Reckendorf's view that 'in and 'an are the earlier forms, from which 'inna and 'anna developed under certain conditions (Syntakt. Verhältnisse, p. 354). The old forms, however, remained in combinations where the n had become changed by phonetic causes: to n as in king before

velars, assimilated before l, and perhaps before m; possibly it had also become palatal p (as in oignon) before j and y. The new forms inna and anna, however, gradually penetrated also into these combinations; both formations could be used for a while side by side, and this lcd also to some uncertainty in their use which produced the unclassifiable instances. As an interesting parallel we might adduce the Hebrew imperfect of roots primæ n. The n was assimilated to the following consonant (yinpol > yippol). The assimilation did not take place in roots where n was followed by a guttural (where genination was impossible) and, less consistently, in roots with p, q, p, and p (but not p, p) as second radical. The reason there is probably in the case of p and p0 that p1 had already become p1. For p2 and p3, see below under saufa.

k Ibn Mālik ('Alfiyya 194) gives an explanation along syntactical lines: 'when the khabar of 'an is a verb, and not a curse or blessing or an uninflected verb, then it is best to separate them by qad or a negation, or sa, saufa, or lau.' This partly covers our own rule, and in any event does not exclude it. The cases which remain unexplained by our rule cannot be

accounted for by Ibn Mālik's either.

For sa- and saufa there are some early instances: 'an sa-yakūnu (Koran, lxxiii, 2011); za'ama l-Farazdaqu 'an sa-yaqtulu 'Farazdaq asserts he is going to kill' (Jarīr, ed. Ṣāwī, p. 348, line 3); 'un saufa ya'tī kullu mā quddira 'that everything that is decreed will come' (anon., Suyūtī, Sharḥ Shawāhid al-Mughnī, p. 280). It is possible that the two particles could intervene between 'an and its predicate (hut then we should read subjunctive). Perhaps the key is given by the Hehrew parallel ahove, where s and z restrain assimilation. I cannot say what change n might have undergone before s, but it may have differed in some way.

Many of our examples come from Western sources, but there are also some undoubtedly Eastern ones. We cannot claim to have established that there is anything specifically Western in the alleviated forms. I hope, how-

ever, to have shown that these fossil forms are of some interest.

I Special conditions appear to attach to ka-'an 'as if'. It appears more frequently than 'in and 'an before initial consonants other than those mentioned. There is some difference of opinion as to whether it exercises rection, and which case it governs. Sībawaihi quotes an anonymous line: ka-'an thadyāhu huqqāni 'as if its two breasts were two wooden bowls', adding that Khalīl insisted that thadyāhu was nominative (i, 242). Khalīl takes the same attitude with regard to a line quoted immediately before this: ka-'an xabyatun ta'tū'ilā wāriqi s-salam 'as if a gazelle stretched itself towards the yellow mimosa' (by some Yashkurī, i.e., a Yemenite, cf. Schawahid-Indices, p. 220, a, 26), but Zamakhsharī heard it recited with xabyatun, xabyatin, or xabyatan—which makes one feel that Khalīl was simply laying down the law. Suyūtī (Jam', ii, 18) knows only xabyatin, and quotes the line

as an example of intrusive 'an. There seems indeed to have been some confusion between ka-'an and ka-. One cannot read anything but the accusative in the line of Ru'ba (Appendix, iv, 3): ka-'an waridaihi rishā'u khulub 'as if its jugular veins were palm-ropes'. There is no suggestion here of Hijazi dialect.

m Ibn Hishām (Mughnī, i, 35) says that the Hijazi dialect put both the subject (ism) and the predicate of a nominal clause introduced by 'inna, 'anna, etc., into the accusative. He quotes a hadith: 'inna qa'ra jahannama sab'ina kharifan 'verily the bottom of hell is seventy years' journey deep' (=Muslim, Janna 31, etc., but all printed texts have the nominative sab'una), and a line by 'Omar b. 'Abi Rabi'a (not found in his Diwan); ending: 'inna hurrāsana 'usudā 'verily our guardians are lions'. 'Ushmūnī (i, 214) quotes further a line by 'Ajjāj (Appendix, xxxiii, 1) yā laita 'ayyāma s-sibā rawāji'a 'would that the days of youth came back' and one by Muḥammad b. Dhu'aib al-'Umānī (or by 'Abū Nukhaila, cf. Khizāna, iv, 292) with double accusative after ka'anna. It has been shown (§ 12 m) that this peculiarity may help us to solve the difficulty of 'inna hādhāni la-sāhirāni (Koran, xx, 66/63). 'Ushmuni quotes Ibn Sida and others as saying that this eonstruction of the 'sisters of 'inna' was current in some dialect, although according to Sabban ad loc. most grammarians reject it altogether. We may aeeept Ibn Hishām's view that it was West-Arabian. Since it was so obviously un-Classical we need not wonder that it is so rarely found. As for laita, the double accusative was accepted as correct in Classical Arabie (cf. Fleischer, KI. Sehr., i, 467 seq.; Reekendorf, Syntax, p. 124 note). This serves to confirm the existence of the Hijazi construction, which thus merely carried to its conclusion a tendency found in other forms of Arabie, viz., to assimilate the government of the sisters of 'inna to the 'af'al al-qalb (Wright, ii, 48 seq.) with which they were apparently felt to have some connection. Indeed, if de Goeje (in a note on Wright, ii, 83) is right, then laita < ra'aita has gone along the opposite eourse, from the 'af'āl al-qalb to the sentence-particles. That feeling of the Arabic speaker is erystallized in the grammarians' term for these particles, al-huruf al-mutashabbiha bil-fi'l 'verb-like particles'.

n As against this, Khalil (quoted by Sībawaibi, i, 242) states that some Arabs put the ism of 'inna in the nominative. He gives an example, 'inna bika Zaidun ma'khūdhun, which means perhaps 'Zaid is enthralled by thee', and where 'inna may be no more than 'yes'. The poetical quotations immediately following have not 'inna, but ka'an. The whole looks rather like an attempt to account for 'inna hādhāni la-sāḥirāni (Koran, xx, 66/63; cf. last section).

o The predicate of kāna is sometimes found to be in the nominative instead of the accusative (cf. Nöldeke, Zur Gramm., p. 38; Schwarz, Umar, iv, 137; Reckendorf, Syntax, p. 97). The majority of the instances quoted is of Hijazi origin. ²¹ An instance from hadith, where the nominative is secured by

the spelling, is Bukhārī, Mazālim, 25: kāna dhālika sh-shahru tis'un wa-'ishruna 'that month was twenty-nine days'. Qastallani (iv, 274) remarks that cases of this kind are frequent in hadith. Another case, secured by rhyme, is the line ascribed to 'Umm 'Aqīl, the wife of 'Abū Tālib, of course a Hijazi: 'anta takūnu mājidun nabīlun/'idhā tahubbu sham'alun balīlun 'thou wilt be generous and noble when a damp north wind blows' (Ibn 'Aqil, p. 77, Shinqiti, i, 89). The takūnu is here taken by the Arab grammarians as za'ida, but this is most improbable and makes little sense. In this respect the Hijaz dialect (if the construction was dialect) differs not only from Classical Arabie, but also from Ethiopie and modern South-Arabian (cf. Brockelmann, GVG, ii, 357). We must hold against it those cases in which the subject of non-copulative kāna (kāna t-tāmmatu) appears to be in the accusative, e.g., 'illā 'an takūna tijāratan 'but let there be some trade' (Koran, iv, 33/29; in kanat 'illa saihatan wahidatan 'there was only one cry' (xxxvi. 28/29); 'idhā kāna hīna l-'aṣri 'when it was the time of the evening-prayer' (Bukhārī, 'Ijāra, 11, cf. Qasṭallānī, iv, 133). This is frequent in Ethiopic (cf. Brockelmann, GVG, ii, 357) and may have heen common in West-Arabian. The uncertainty thus produced with regard to the subject of noncopulative kāna may easily have led to a similar uncertainty with regard to the predicative of the copula.

p One of the best-known syntactical features of the Hijaz dialect is that it used mā (and to a smaller extent lā and 'in) in nominal clauses with the force and rection of laisa. This mā Hijāziyya was discussed in detail by Sībawaihi (i, 21-3) and by every subsequent Arabic grammarian. Nevertheless, we are neither certain about the frequency of its employment in the Ilijaz, nor about its origins. According to Ibn Hisham (Mughni, ii, 6) it was also employed in Tihāma and Najd, while Jauharī (Ṣaḥāh, ii, 577) expressly denies that it was employed in Najd. As that region was inhabited by West-Arabian tribes as well as by Easterners, both may be right. It is not at all frequent in Hijazi sources. I have found only one instance in 'Omar b. 'Abī Rabī'a (ecxii, 2, where however the edition has the nominative), and three in the Koran. Two of these are quoted by Sibawaihi (i, 22): mā hādhā basharan 'this one is not a mortal' (xii, 31) and mā hunna 'ummahātihim 'they are not their mothers' (lviii, 2). Sibawaihi adds that the Tamim, except those who knew the official spelling, pronounced these with the nominative. It appears, however, that this was not only a matter of ignorance. The Hudhali Ibn Mas'ud is said to have read nominative in the first verse (Jeffery, Materials, p. 49). In the second verse 'Asim, one of the canonical readers, read nominative (but his rāwī Ḥafs has the accusative), and Ibn Mas'ūd, Rabī' b. Khuthaim, and 'Abū Mijlaz read bi-'ummahātihim (Jeffery, p. 99, 307). The third case: mā minhum min 'ahadin 'anhu hājizīna 'not one of you can shield against it' (lxix, 47; no variants), is not mentioned by the grammarians, perhaps because they took it as $h\bar{a}l$. The construction of $m\bar{a}$ with bi-(§ q below) is frequent in the Koran (Bergsträsser, Verneinungspartikeln, p. 35).

q We have not much hetter evidence for the ma with the nominative, called hy the grammarians mā Tamīmiyya. This is unanimously declared to be more in agreement with grammatical theory ('agyas), but Ibn Ya'ish remarks (p. 132) that the mā Hijāziyya is more elegant ('afşah). 'Aşma'i (quoted by 1hn Ya'ish, p. 133) stated that be never heard ma used with the accusative in bedouin poetry. It may be noted that he did not say that he 'heard' mā used with the nominative. There are, bowever, some early instances in which the nominative is secured by the rhyme: wa-mā kullu man talqu bi-dhalika 'alimun 'not everyone you meet is aware of this' (the Tamimi 'Afif b. Mundhir in 'Aghānī, xiv, 46); wa-mā kullu mā fī n-nafsi lī minka muzharun 'not all I feel with regard to thee is evident' (an anonymous 'Asadī in Ḥamāsa, p. 618; Yāqūt, Mu'jam, iii, 805); mā kullu mā yahwā mru'un huwa na'iluhu 'not all a man desires he will achieve' (the Bakri Tarafa, ed. Ahlwardt, xiii, 20). In all three cases the construction is rather involved; the distance between mā and its predicate might be adduced as reason for the nominative. Since, however, all three are by Eastern Arabs we must let them stand, until further evidence appears, as proof that the Eastern dialects used ma with the nominative. 14 It seems therefore that we must read in Farazdaq (II, ed. Hell, No. 628, line 28) not as the edition has: mā 'ahadun min Qaisi 'Ailāna fākhiran 'alaihi 'not one of Qais 'Ailan is nobler than he', but fakhirun; and in the sentence ma' ana mu' akhidhu ka bi-shai'in taquluhu 'I shall not punish thee for anything thou sayest' spoken by the Hijazi Sa'd (Tabarī, Annales, i, 2316) mu'ākhidhaka (Ibn Hishām, in the parallel passage, reads bi-). The line of the Hawazin poet Simma al-Qushairī ('Aghānī, v. 127): fa-mā hasanun 'an ta'tiya l-'amra . . .' it is not right that thou shouldst approach the matter . . .', should perhaps be read with the accusative hasanan, in view of the West-Arabian character of the Hawazin dialect. We hardly know which to read in Imrulgais (ed. Ahlwardt, Appendix xviii, 43) wa-mā hādhā shaṭāratu lā'ībin 'this is not the skilful game of a chess-player' and (ibid., 24=xix, 19) mā 'antum qabīlun wa-mā khawal 'ye are neither tribe nor maternal uncles' (one would expect wa-la), as we do not know to which grouping the Kinda dialect belonged.

r The grammarians lay down a number of cases in which even in the Hijaz dialect $m\bar{a}$ was followed by the nominative, or as they put it, $m\bar{a}$ was prevented from exercising its rection. Most of these seem to be based on the theory which required $m\bar{a}$ to bave less full rection than laisa, the principal member of the class. The Arab writers themselves admit that most of these rules are constantly broken. The eclectic grammarian Ibn 'Abdannūr (MS. Bodl. Uri 1079, f. 96 b) retains only two of them: that the predicate

must not precede the subject and that no 'illā 'except' must intervene between mā and its predicate (lā yantaqidu n-nafyu). The most interesting case of violation of the first rule is a line by Farazdaq (ix, 34): fa-'asbahā qad 'a'āda llāhu ni'matahum/'idh hum quraishun wa-'idh mā mithlahum basharun 'thus God made their prosperity permanent, since they are Quraish and since no mortal is like them'. Some read here the accusative in mithlahum (Sībawaihi, i, 2210); as lectio difficilior this is no doubt hetter. Ibn 'Abdannūr explains that Farazdaq wanted to caricature the Hijaz dialect and erred through ignorance of true Hijazi usage. The poem is however, perfectly serious, and we should rather agree with Zajjāj (quoted Khizāna, ii, 130) who says 'true, Farazdaq was a Tamimi, but he was also a Moslem and had read the Koran'. In fact Farazdaq's language is hy no means of a pure Eastern eharacter, and he prohahly used the mā Hijāziyya as a form of Classical Arabie—without, of course, heing aware of grammarians' strictures made after his time.¹⁷

s The second rule of Ibn 'Abdannur is of some importance, since we should expect the predicate of mā after 'illā to behave the same as without illa if the accusative after $m\bar{a}$ is a real feature of the language. In the case of generic la, the noun excepted hy means of 'illa is not in the accusative, but in the nominative. The reason is, of course, that the accusative after this $lar{a}$ is the old case of exclamation, not the normal accusative ease (cf. Reekendorf, Syntax, p. 505 and § w helow). With regard to the exceptive sentence in which the major term is expressed (istithna muttaşil), Sibawaihi (i, 317) says that both in Hijazi and Tamimi usage the minor term is in the nominative, as in mā 'anta bi-shai'in 'illā shai'un lā yu'ba'u bihi 'you are nothing but a thing no one takes any notice of'. With laisa the minor term is in the accusative in the Hijaz dialect, ef. also § 2 below. In sentences where the major term is not expressed, i.e., where the excepted word is grammatically directly dependent on mā (istithnā' mufarragh), the grammarians' ruling is no less strictly observed. The predicate is in the nominative not only in verses by Central or East-Arabian poets ('Alqama, xiii, 13; Tarafa, supplement, v, 8; Shanfarā, Lāmiyya 9; Jarir, ed. Ṣāwi, p. 41, line 4 in rhyme), but also on numerous occasions in the Koran, where mā with accusative object is so rare (cf. Bergsträsser, Verneinungspartikeln, p. 35). The grammars cite two instances where the predicate is in the accusative and secured by rhyme. One is: mā d-dahru 'illā manjanūnan bi-'ahlihi/wa-mā sāḥibu l-ḥājāti 'illā mu'adhdhaban 'fate is but a wheel for those concerned with it, and he who is in need is nothing but tortured'. This line is ascribed to an anonymous 'Asadi or Sa'di, in the latter case a Hijazi (cf. Schawahid-Indices, p. 33, b, 8). The first hemistich is quoted in this form by 'Astarābādī (Kāfiya comm., i, 267), without the mā by Ibn Hishām (Mughnī, i, 69). The second instance is cited on Farra's authority (in 'Astarabadi, Kafiya comm., i, 237) in support

of his theory that 'illā can govern the accusative in any context: yuṭālibunī 'ammī thamānīna nāqatan/wa-mā lī yā 'afrā'u 'illā thamāniyā 'my uncle demands from me eighty camels, but I, o 'Afrā, have only eight'. Possihly thamāniya should here he taken as suhject and lī as predicate. Baghdādī (Khizāna, ii, 31) ascribes the poem to the 'Udhri 'Urwa b. Ḥizām, i.e., a Westerner, hut says it is wrongly quoted and should end ghaira thamāni(n).

t The Arab grammarians' opinion was that mā governed the accusative in Hijaz dialect hecause its function in the nominal clause resembled that of laisa. Reckendorf (Syntakt. Verhältn., p. 331) saw the reason in its general character as copula and consequent similarity to laisa. Actually the accusative after laisa (which is of nominal origin18 and can serve also as a verhal negation. like mā, cf. Nöldeke, Zur Gramm., p. 89) is not much easier to understand than that after mā.19 Whichever negation has the priority, it is certain that the point at which the action of analogy set in first was the construction with bi- instead of the accusative. In the Koran, as elsewhere, it is a good deal more frequent than the mā with the accusative or nominative. In contrast to the other two constructions it was current throughout Arabia. The question whether the mā bi- construction was to be identified with the Hijazi or 'Tamimi' mā, exercised the minds of the Arah grammarians a good deal. Sīhawaihi (i, 317) and Ibn Mālik denied that it had any connection with the construction of mā with the accusative, while Ahū Alī al-Fārisī and Zamakhshari (Mufassal, p. 36) held that only those who use mā with the accusative could also use it with bi- ('Ushmuni, i, 203). The latter view was held by Baidawi (ii, 317). The discussion was on a purely theoretical level. 'Ushmuni strikes a more realistic note by remarking that mā... bi- is common in the work of Tamimi poets. A survey of the Six Poets produces curious results. It occurs once only in the poems of the Westerner Nāhigha (xvii, 16) and the same in those of the Easterner (Bakri) Tarafa (iv, 98). I have not traced any occurrences in the poems of the Westerners 'Antara and Zuhair and the Tamimi 'Algama. Since no cases of mā with nominative or accusative are found in their work, this means that they did not use mā in nominal clauses at all. The only poet who uses mā bi- with any frequency is Imrulgais (xvii, 1, 18; xxiv, 4; lii, 59; lx, 2). In the poem Suppl. xviii of that poet, two cases of the construction without bi-occur (cf. § q at end), hut it is douhtful whether that piece is genuine. Farra' (quoted Khizana, ii, 134) states that many of the people of Najd put the predicate of a nominal clause negated by mā in the genitive when it was preceded by bi-, otherwise in the nominative. It is not clear what we should infer from this for the practice of the remaining Najdis: did they, as Ibn Hisham taught (cf. § p above) employ . the accusative, or should we take it, hy combining the statements of Farra' and of Jauhari (ibid.), that they did not know the use of mā in nominal clauses? The latter would fit in with the statistics referred to just now.

u The negation 'in appears to be mainly West-Arabian, if one can judge from the instances collected by Nöldeke (Neue Beiträge, p. 21; Zur Gramm... p. 89) and Reckendorf (Syntax, p. 45). Sībawaihi and Farrā' declare that in nominal clauses the predicate after 'in is in the nominative, Mubarrad and Kisā'ī that it is in the accusative (Zamakhsharī, Mufassal, p. 143; fuller Ibn Hishām, Mughnī, i, 22).20 No dialect is mentioned, but Ibn Hishām says that the accusative is heard among the people of the 'Aliya, as in: 'in 'ahadun khairan min 'ahadin 'illa bil-'afiya 'no one person is better than another except by the grace of God' or 'in dhālika nāfi'aka wa-lā dārraka 'this is neither good nor had for you'. The accusative occurs in two anonymous verses: 'in huwa mustauliyan 'ala 'ahadin 'he has no power over anyone', where the accusative is secured by the metre ('Astarābādī, Kāfiya comm., i, 270 = Khizāna, ii, 143) and 'ini l-mar'u maitan bi-nqidā'i hayātihi 'a man does not die with the expiry of his life' ('Aini, Maqasid, ii, 145). In the Koran negative 'in occurs only in association with 'illa (vi, 29; vii. 154/155, etc.) with the predicate always in the nominative (cf. the remarks in § s above). An accusative after 'in occurs, according to Baidāwī and Ibn Hishām (Mughnī, i, 22) in a variant reading of the Kufan Sa'īd b. Jubair (d. 94/713) in vii, 193/194: 'ini lladhîna tad' una min duna llahi 'ibadan 'amthāl'/ kum 'those whom ye call upon besides God are not servants like yourselves'. The right way to the appreciation of this reading was indicated by 'Abū Hayyan (quoted Khizana, ii, 146)21 who declares it to be a case of the contamination of two readings (tanāqud al-qirā'ataini). Slightly improving upon 'Abu Hayyan, we may reconstruct those two readings as follows: (a) 'inna lladhīna . . 'ibādan 'amthālakum 'verily those whom . . . are servants like yourselves', i.e., the same as the standard reading, but with the Hijazi peculiarity discussed in § m above; and (h) 'ini lladhīna ... 'ibādun 'amthālukum, where 'in is probably 'alleviated' 'in with the meaning of inna (cf. § e above). It could have been taken as such in the conflated reading but for the grammarians' theory that alleviated 'in cannot exercise rection. To take 'in as negation does not make much sense, and in any event the reading cannot serve as evidence for the case after it. The existence of accusative after 'in does not seem to agree with the rule, acknowledged by all, that mā'in cannot govern the accusative. However, there is a shāhid for accusative after mā 'in which makes the impression of being genuine: banî ghudanata ma 'in 'antumu dhahaban / wa-la saraifan walakin 'antumu l-khazafu 'o Banū Gbudāna, ye are neither gold nor silver, but ye are clay' ('Astarābādī, Kāfiya comm., i, 267 = Khizāna, ii, 124, from Ibn Sikkīt). The Banu Ghudana were a clan of Tamim, but the word saraif (so Khizana) 'silver' is of South-Arabian origin, suggesting an author from South-West Arabia. While no instances of 'in with bi- are available, there is one of mā 'in with bi- in a line by the Hudhali Mutanakhkhil (ed. Hell, iv,1).

v Zamakhsharī (Mufaṣṣal, p. 36, cf. ibid., p. 16) informs us that in the Hijaz dialect also lā was construed like laisa. He lays down a number of rules resembling those about the mā Ḥijāziyya, with the additional restriction that both subject and predicate must be indeterminate. Ihn Malik and his commentators follow Zamakhshari. Sibawaihi (i, 22) gives this rather disapprovingly as the opinion of some. 'Astarāhādī twice (Kāfiya comm., i, 112, 266) denies the possibility of this construction, against the author of the Kāfiya itself, who admitted it as shādhdh. Ihn 'Aqīl (p. 82) claims that the Tamim used la in nominal clauses with nominative of the predicate. The construction with the accusative does not occur in the Koran. There la occurs in nominal clauses only in co-ordination, where it replaces other negations (xxxi, 32/33; xxxvi, 40; lx, 10; cix, 3-5); the predicate is in each case in the nominative, apparently without any variant readings. It might he said that la is in these cases equivalent to laisa, but it certainly has not inherited the construction of the latter. We do not know whether to read nominative or accusative in the verse of 'Omar b. 'Abī Rabī'a (cexii, 4) lā d-dāru jāmi'at" an wa-lau jama'at ... 'the house shall not contain us together, and if it did . . .'. However, in the line of his fellow Westerner, Hatim Ta'i: fa-lā şahwun wa-lā l-ghaimu jā'idu 'there is neither clear sky nor does the cloud rain generously' (xxxix, 2), the nominative is secured by the rhyme. The la is in hoth cases due to co-ordination, as it is in the two shawāhid 'Ushmūnī (i, 204) quotes for the use of the accusative: ta'azzi fa-lā shai'un 'alā l-'ardi bāqiyā/wa-lā wazarun mimmā qadā llāhu wāqiyā take courage, for nothing is permanent on earth and no fortress will guard from the decree of God' (anon.) and: wa-hallat sawāda l-qalbi lā 'anā bāghiyā/siwāhā wa-lā 'an hubbihā mutarākhiyā 'she has settled in the corc of the heart; I neither desire another nor let off loving her' (ascribed to the Easterner Nabigha al-Ja'di). Both this verse and the one hy 'Omar are against the rule of Zamakhshari demanding indeterminate subject. The evidence, if anything, is rather against assigning the accusative to the Hijaz. It is to he noted that the predicate is in each of the cases hitherto cited, except Koran, Ix, 10, a participle. This makes it difficult not to connect the Arabic construction with the Mishnaic Hehrew usage of employing lo instead of 'eyn hefore participles (Segal, Grammar, p. 162). In Mishnaic Hehrew, too, this is specially frequent where negatived participles are coordinated. The usage may in both languages have arisen first from the many cases in which participles are co-ordinated with finite verh-forms (as in all the Koranic instances). As for the accusative, the verses in which it occurs are too uncertain to prove its existence. We should rather rely on the cases in the Koran where the absence of variants suggests that in early times the accusative was not used in such cases. The use of lā in nominal clauses is of different origin and has a different function from the use of mā and in. 22 We

must exclude from the discussion of this feature instances where the lā is only apparently a copula, but in fact generic la, as in the line of Sa'd b. Mālik of Bakr (Hamāsa, p. 250, line 4) which ends fa-'anā bnu Qaisin lā barāhu-a passage much discussed by Arab philologists. We best translate, with Sībawaihi (i, 310): 'I am the son of Qais-there is no fleeing'. In the same cycle of poems we find a line by the Bakri Murra b. Dhuhl 'if thou hast started a war against me' fa-la wakalun wa-la raththu s-silahi. Nöldeke (Delectus, p. 41) translates 'then I am neither a coward nor one with wornout weapons', hut perhaps one should rather take it as: '(then have no hopes, for in my tribe) there is neither a coward nor . . .'. In both these cases nominative after generic la is found, as occasionally in poetry (cf. Reckendorf, Syntax, p. 119). The same is probably true for: naşartuka 'idh lā sāhibun ghaira khādhilin 'I assisted thee when there was no friend other than a faithless one' (anon., Ihn Ilishain, Mughnī, i, 195), where ghaira ia preposition. It is also doubtful whether we should include among the cases of $l\bar{a}$ in nominal clauses those in which the subject is a dependent clause, as $l\bar{a}$ 'alaikum 'an lā taf'alū 'it will be no sin for you not to do it' (Bukhārī, Qadar, 4; cf. Qastallānī, ix, 351). In Biblical Hebrew lo was similarly employed for 'eyn when the subject was an infinitive, e.g., lo tobh heyoth hā-'ādhām lēbhaddō 'it is not good for man to be alone' (Gen., ii, 18), or lō nākhōn la'diōth kēn 'it is not proper to do so' (Ex., viii, 22).

w According to Zamakhshari (Mufassal, p. 15) the Hijaz dialect could introduce a predicate into a clause with generic la, as in la rajula fi l-baiti 'there is no man in the house', while the Tamim dialect could not have a predicate, i.e., they could only say la rajula 'there is no man'. 'Astarābādi (Kāfiya comm., i, 112) confirms that Zamakhsharī was the originator of this observation. Apparently it is based on the fact that in the Koran generic la very rarely appears without predicate, except in a few set phrases (cf. Bergsträsser, Verneinungspartikeln, p. 57). The statement was challenged by Juzuli, who modified it by saying that the Tamim dialect could have an adverbial predicate, but not an adjectival one, and by 'Andalusi, who comments: 'I do not know whence he took this information. Perhaps he derived it by analogy. The truth is that the Tamim must elide the predicate when it is an answer to a question or a qarina of some other kind points to it. If there is none, then the predicate must appear with the Tamim just as in the Hijaz' ('Astarābādī, loc. cit.). The purely theoretical character of the whole discussion is illustrated by Zamakhshari's remark on a line in the diwan of Hātim Ṭā'ī (No. 50, line 6): wa-lā karima mina l-wildāni maşbūḥu 'and no noble born of children is given a morning drink', that Hatim must have given up the usage of his own dialect for that of Hijaz. 23 Predicate after la occurs in Farazdaq, 'Akhtal, and other Eastern poets, but it may have been rarer there than in the West. The construction without predicate is, of course, the older, since the accusative was originally exclamatory (Nöldeke, Zur Gramm., p. 47; Reckendorf, Syntakt. Verhältn., p. 343). In the way in which it is used in the Koran, the generic negation did not differ in function from clauses with laisa or mā. This gives some substance to the assumption that the generic lā arose in some other part of Arabia—where it continued to serve in its original exclamatory function—and was imported to Hijaz as a Classical Arabic form.

x In negative exceptive clauses in which the minor term belongs to a different logical category from the major term, as 'no man rose, only a donkey' (istithna' munqati'),24 the Hijaz dialect is said to have employed the accusative for the minor term, while in the Tamim dialect it was in whichever case the major term happened to be (Sībawaihi, i, 319). The Hijazi construction occurs in Koran, iv, 156/157: mā lahum bihi min 'ilmin 'illā ttiba a z-zanni 'they have no knowledge concerning Him, only following their conjectures' and xcii, 19-20: wa-mā li-'ahadin 'indahu min ni'matin tujzā 'illā btighā'a wajhi rabbihi 'no one has done any good to him which requires recompense, but seeking the face of his Lord'.25 It also occurs in a line ascribed to the Sulamī 'Abbāa b. Mirdās (Ibn Hishām, Sīra, p. 865, line 8): wa-lam yakun/binā l-khaufu 'illā raghbatan wa-taḥazzuman 'there was no fear in ua, only desire and preparedness'. The instances for the nominative come all from Eastern sourcea; a Bakri (Hamāsa, p. 249, line 2 in rhyme); an 'Asadī (Tabarī, Ann. i, 1952, line 6, dto.); the Taghlibī 'Akhţal (ed. Salhānī, i, 2); the Numairī Jirān al- 'Aud (ed. Cairo 1350, p. 52); the Tamimi Farazdaq (ed. Boucher, Ixiii, 33). Sībawaihi (i, 320) quotes a few linea in which either case can be read, remarking that the Hijazis read them with accusative, the Tamimis with nominative.

y It is, however, doubtful whether the distinction between istithna? mungatic and muttasil was really the decisive factor in this connection. According to Sibawaihi (i, 318) the minor term in any negative exceptive clause with 'illa might in one dialect 'whose Arabic is trustworthy' stand in the accusative, as in mā marartu bi-'ahadin 'illā Zaidan 'I passed no one except Zaid', which is of course muttașil. Cases of the accusative occur in the Koran: iv, 49/46; iv, 69/66 (reading of Ibn 'Amir); x, 98; xi, 83/81 (all except Ibn Kathīr and 'Abū 'Amr); xi, 118/116. In all of them, except iv, 49/46 the major term is expressed. This construction did not meet with the approval of the grammariana. Baidāwī calls the majority reading in xi, 83/81 less elegant (ghair al-'afşah); Zamakhsharî (Mufaşşal, p. 31) gets out of the dilemma by attaching 'illa to an earlier positive clause (so that the accusative would be correct). The truth is probably that the real distinction in Hijazi lay not between istithna" muttasil and munqati, but between these two together and istithna' mufarragh, and that even this distinction was sometimes neglected, the tendency being to have always accusative after 'illā. 'Astarābādī

(Kāfiya comm., i, 228) replaces Sībawaihi's classification by an even more complicated one into cases where the major term can be omitted without affecting the meaning, in which case the Tamim make the minor term agree with it in case, and those in which it cannot be omitted, and where the Tamim too must have the accusative. As example for the second he gives Koran, xi, 45/43: lā 'āṣima l-yauma min 'amri llāhi 'illā man raḥima 'there is no protector to-day from the decree of God except (a protector for) those upon whom He has mercy' (where the case of man cannot he discerned).

z The m nor term in an exceptive clause negated by laisa or negative kāna was put in the accusative in the Hijaz dialect ('Ahū 'Amr b. al-'Alā', quoted by Ibn Hisham, Mughni, i, 227). These thus differ from the Hijazi mā (cf. § s above). Cases of this occur in Koran (viii, 35; x, 20/1926) and Sîra (Ibn Hishām, p. 383, line 20; Taharī, Annales, i, 1035, line 3). 'Abū 'Amr adds that the Tamim used in such cases the nominative, saying e.g., laisa į-tību 'illā l-misku 'perfume is none hut musk'. His contemporary, Isa b. Umar, was so amazed at this assertion that he confirmed it by direct inquiry from a Tamimi (cf. § 2 s). However, the Tamimi poet Aus b. Hajar (v, 1) is quoted by Sibawaihi (i, 317) as shahid for the accusative after laisa ... 'illa. This may mean no more than that the Tamimi construction was only used in Tamimi speech, not when members of that trihe employed Classical Arabic. If Hijazi Arabic was more persistent in using the accusative in the case of laisa, why did it give up the accusative after mā . . . 'illā? The answer lies perhaps in the purely accidental point that the instances with $m\bar{a}$ are almost always istithna? mufarragh, while those with laisa, etc., normally express the major term, and therefore are drawn into the tendency mentioned in the last paragraph.27

aa In a hadith (Ibn Sa'd, IVB, 46, line 7) the Prophet says: 'Usāmatu 'aḥabbu n-nāsi'ilayya mā ḥāshā Fāṭimata. This is mostly explained as: 'Usāma is the dearest to me of all men, not excepting Fāṭima'. In the version of Tabrānī the words wa-lā ghairahā 'nor anyone else', are added to make this quite unmistakable. Ibn Mālik (quoted by Ibn Hishām, Mughnī, i, 109) takes mā ḥāshā as meaning the same as hāshā 'except', adding that it might have been so employed 'in the language of the Prophet'. Ibn Mālik here contradicts his own statement ('Alfiyya, 331) that hāshā must not be accompanied by mā. His commentator 'Ushmūnī (ii, 127) prohibits a phrase like qāma I-qaumu mā hāshā Zaidan 'the people rose except Zaid': but that is just the phrase which Ibn Mālik adduces in the Mughnī quotation to prove his point, adding that it is sometimes used (qad yuqālu). Ibn Hishām and 'Ushmūnī cite as further evidence a line by the Taghlibi 'Akhṭal (p. 164, line 10): ra'aitu n-nāsa mā hāshā Quraishan/fa-'innā naḥnu 'afḍaluhum fa'ālan 'I have seen the people, except for Quraish, and we are the most excellent among them in

deeds'. It seems to me that 'Akhţal really meant 'not excepting'. In any event there seems to be no ground for assigning this usage to Hijaz.

bb This hāshā was originally a noun followed by the genitive (cf. Reekendorf, Syntakt. Verhältn., p. 426). The tendency of Arabic is to bring it into line with the verbal phrases mā khalā, mā 'adā, by adding mā, as in the last paragraph, and by putting the noun after it in the accusative. The latter usage is not reeognized by Sībawaihi, and given rather hesitantly by Zamakhsharī (Mufaṣṣal, p. 31) on the authority of Mubarrad. 'Ushmūnī (cf. last par.) cites an imposing array of scholars who admit the accusative after hāshā. The available shawāhid point to the East: 'Akhṭal (cf. above) and the 'Asadi Jumaiḥ (Mufaḍḍaliyyāt, eix, 4).

cc Besides the ordinary compound sentence (jumla dhāt wajhaini), Arabic possessed two other ways of lending emphasis to a clause by extraposing one of its elements:28 The first is by means of 'amma, which stresses the non-extraposed part, cf. Zamakhsharī (quoted by Ibn Hishām, Mughni, i, 54): 'If you wish to emphasize 'Zaid is going' and to stress that he is definitely going or contemplates going, being firmly decided on it, then you must say 'ammā Zaidun fa-dhāhibun'. The word following 'ammā is a oneterm existential clause, and therefore in the nominative (cf. Reckendorf, Syntakt. Verhältn., p. 309). The second way is by placing the extraposed word before the clause in its original case, as in 'iyyāka na'budu 'Thee we worship' (Koran, i, 5). The minor clause may be introduced by fa-, as Allaha fa-'bud 'serve God' (Koran, xxxix, 66). As will be seen from the examples, this second construction strongly emphasizes the extraposed word. The two types were subsequently confused, and words after 'ammā (always with fa-) were put in the accusative, when their place within the minor clause would have required that case. Thus we find fa-'ammā l-yatīma fa-lā taqhar 'do not wrong the orphan', etc. (xciii, 9-10); and xli, 16/17 where Ibn 'Abbas, 'A'masb, and Ibn 'Abi 'Ishaq read 'amma Thamūdan fa-hadaināhum 'Thamūd we guided aright'. This is especially common in commands and imprecations (Sibawaihi, i, 58), and does not seem connected with any particular dialect. There are, bowever, cases where 'ammā is followed by the accusative whatever the virtual case of the noun within the minor clause, and where the dialects differ. Sibawaihi (i. 162-5) discusses such cases at great length. His exposition is far from clear and operates with logical categories which seem to have little bearing on the syntactical distinctions. I sum up as well as I can:

dd In cases such as 'ammā 'ilman fa-'ālimun 'as to knowledge, he is knowledgeable' or 'ammā 'ilman fa-lā 'ilmun 'indahu 'as for knowledge, he has no knowledge', where the extraposed noun is an indeterminate verbal noun, the accusative was the rule, only the Tamim used the nominative, though even in their dialect the accusative was considered more correct.

An example of the accusative is a phrase ascribed to a man of Harith (Ḥamāsa, p. 25, line 21): 'ammā qatlan fa-lastu qātilan 'as for killing, I am not a killer'.

eo In the case of 'ammā l-'ilmu fa-'ālmun 'as for knowledge, he is knowledgeable', with a determinate verhal noun, 29 the Hijaz dialect had either accusative or nominative, the Tamim always nominative. An example is in a line by a Makhzūmī, i.e., Hijazi (cf. Schawahid-Indices, p. 24, a, 1): 'ammā l-qitāla', fa-lā qitāla ladaikum 'as for fighting, you have no fight in you'.

ff When the extraposed noun was concrete, as in 'ammā 'abīdun fa-dhū 'abīdin, or 'ammā l-'abīdu fa-dhū 'abīdin, both meaning 'as for slaves, he is a possessor of slaves', all dialects had the nominative. Sībawaihi claims to have heard from 'the Arabs' the phrase: 'ammā bnn Muzaniyyatin fa-'anā bnu Muzaniyyatin 'as for being the son of a Muzaina woman, I am the son of a Muzaina woman'. Since the Muzaina were in close contact with Medina (cf. Kowalski, Kais ibn al-Khatīm, p. xiv, n. 1) we may take this as a sentence spoken by a Hijazi. Yūnus (quoted Sīb., p. 164) knew of some Arabs who employed the accusative in this construction.

gg The next class is described by Sībawaihi as sifāt 'adjectives', but the term seems to be taken in a rather wide sense. The model is 'ammā 'āliman fa-'ālimun 'as for being knowledgeable, he is knowledgeable'. Here all dialects have accusative. Sībawsihi cites one example with a substantive: 'ammā ṣadīqan muṣāfiyan fa-laisa bi ṣadīqin muṣāfin 'as for being a sincere friend, he is not a sincere friend'. The same applies—in spite of the participial pattern of jābin—to: 'ammā jābiyan fa-lā 'as for being a tax-gatherer, no' (Balādhurī, Futūh, p. 303). The adjectival character is stronger in: 'ammā ṣādīran fa-wasīquhu jamīlun 'as for one who returns from battle, his booty is fine' (the Taghlibi Quṭāmi, vii, 5). One could, however, take the accusative as circumstantial: 'as for when he returns . . .'.

hh Sibawaihi analyses the accusatives variously as hāl and tamyīz. This is accepted by Reckendorf (Syntakt. Verhāltn., p. 793). It seems more likely that the accusative spread analogically from those cases where it was justified by the virtual place of the extraposed word. Thus the prototype of 'ammā 'ilman fa-'ālimun is huwa 'ālimun 'ilman. Sībawaihi uses this criterion himself when he rejects 'ammā 'abīdan fa-dhū 'abīdin on the ground that one cannot say huwa r-rajulu 'abīdan. Later philologists abandoned the elaborate classification of Sībawaihi. Zamakhsharī in the Mufaṣṣal does not touch upon the matter. Ibn Mālik (Tashīl, f. 43a) only says that the accusative in 'ammā 'ilman fa-'ālimun is Hijaz dialect, but the Hijazis also employed the nominative. 'Ushmūnī (iv, 34) does not mention dialect differences and treats 'ammā l-'abīda fa-dhū 'abīdin (the construction which Sībawaihi bans) and 'ammā Quraishan fa-'anā 'afdaluhum 'as for Quraish, I am their most excellent one' as cases of samā' (usage not covered by grammatical theory).

In his comment he practically rejects Sibawaihi's explanation of these constructions.

ii The word 'asa 'perhaps' has in Classical Arabic two constructions, one without inflection ('alä t-tajrīd): ar-rajulāni 'asä 'an yaf'alā, and one in which it agrees in gender and number with the subject: ar-rajulani 'asaya' an yaf'alā. Sībawaihi (i, 426) assigns them to different dialects, which he does not specify. Baidawi (ii, 263) says the inflected form is Hijaz dialect, the uninflected one Tamīm dialect; Suyūţī (Bahja, p. 33) maintains the opposite. In the Koran uninflected 'asa occurs with plural or dual subject in ii, 213/ 216 and xlix, 11; in the latter passage the Hudhali Ibn Mas'ūd and the Medinean 'Ubayy read 'asau, 'asaina (Jeffery, Materials, p. 93, 304). In both passages 'asa occurs twice, in disjunctive co-ordination. This may have contributed to the choice of the uninflected form. Inflected 'asi also occurs twice: hal 'asaitum . . . 'an tufsidū 'will ye perchance . . . cause mischief' (xlvii, 24/22) and hal 'asaitum . . . 'allā tuqātilū 'will ye perchance . . . not fight' (ii, 247/246). The meaning 'perchance' is not satisfactory: one would want something like 'dare'. This may well have been the original meaning of the verb. Nafi' reads in xlvii, 24/22 'asitum for 'asaitum. This is identical in sound with 'asiya, a dialect form of 'asā, ya'sū 'to be or become big, strong' (Lisan, xix, 283). The connecting link is 'to be able' (for the transition of meaning cf. Eth. kehla, Bibl. Aram. khl 'be able', Arabic kahala 'be mature').30 'Astarābādī (Kāfiya comm., ii, 303) quotes two cases where 'asā is followed not by 'an but by a noun: 'asaitu sā'iman, literally 'I have strength to fast' and the proverb 'asa l-ghuwairu 'ab'usan 'a small cave may bring great evils' (cf. Lisan, vi, 344).31 The uninflected 'asa is an exact parallel to the Mishnaic Hebrew yākhōl 'perhaps' = yākhōl 'he is able', e.g., yākhōl tāqēphāh 'ālāw mishnāthō 'maybe his study is too hard for him' (Aboth, iii, 8). In both cases we have here the rare phenomenon in Semitic of a truly impersonal verb. One feels that there must be more than accidental similarity here. The use of the uninflected form must have arisen somewhere in Arabia (perhaps in an area in contact with later Hebrew) and spread, though it did not superscde the older personal construction. Whether this centre of radiation was Hijaz, we cannot say.

kk Lihyānī (Tāj, i, 626), quoting Kisā'ī and 'Aṣma'ī, states that the use of asyndetic object clauses with the verb in the indicative after verbs of wishing and commanding was current (lugha fāshiya) in Hijaz. Ibn 'Athīr (quoted ibid.) adds that it is frequent in the works of Shāfi'ī. The prose examples quoted (Reckendorf, Syntax, p. 383; Brockelmann, GVG, ii, 525, etc.) come all from Western sources: Koran, xxxix, 64; ii, 77-78/83-84 (where Ibn Mas'ūd possibly read apocopate, cf. Jeffery Materials, p. 27), hadīth, sīra, a prose utterance of a Hudhail poet (Ḥamāsa, p. 40, line 22). Instances from poetry come also from the East: 'A'shā of Bāhila (iv, 30-1);

the Bakrī Ṭarafa (iv, 54). 32 Sībawaihi (i, 40) does not speak of dialect, but says the construction was hardly ever used in speech. This remark is significant, as he was mainly in contact with Arabs from Eastern tribes. The asyndetic construction was obviously the older one. In West-Arabian it continued in everyday speech, while in the East it was only used as an archaism ('poetic license') in poetry. The colloquials followed in this respect West-Arabian usage.

11 According to Sībawaihi (i, 401) one could also use the apocopate in asyndetic object clauses after verbs of command. He quotes as proof: qul . . . yuqimu ş-şalāta 'tell ... that they should hold prayers' (Koran, xiv, 36/ 31).33 We may add qul... yaghfir ū 'tell... they should forgive' (xlv, 13/ 14); kallimī rasūla llāhi yukallim . . . 'speak to the Prophet he should speak . . .' (Bukhārī, Hiba, 8); wa-d'u 'ibāda llāhi ya'tū madadan 'call on the servants of God they should come to help' (a Khuzā'i in Ibn Ilishām, Sīra, p. 806, line 4), etc. It will be seen that the verbs employed are not specific words of command. But for the use of the apocopate, there would be no indication of jussive meaning. Reckendorf (Syntakt. Verhältn., p. 62) observes 'an increasing dependence of the apocopate on the syntactical relation, strongly approaching the situation in conditional clauses'. There is in fact nothing to stop us from taking these as cases of ordinary conditional. clauses with an imperative as protasis (jawābu 'amrin, cf. Reckendorf, Syntax, p. 492), without assuming any elision (as does Wright, ii, 38A). They are parallel to phrases like 'amarahu fa-fa'ala 'he told him to do it', lit. 'he told him and he did it'; 'amara requires an object as much as qāla. There is nothing specifically Hijazi in these constructions, though all the examples given above come from Hijazi sources.

mm The Hijazi dialect seems to have employed the indicative for the apocopate even where no verb of saying or commanding was present. Farrā' (cf. Orientalia, xv, 182) adduces as examples of this: 'innā zayannā s-samā'a...lā yassama'ūna 'we adorned the sky...so that they should not listen' (Koran, xxxvii, 6-8), and kadhālika salaknāhu...lā yu'minūna bihi 'and thus we have introduced it...so that they will not believe in it' (xxvi, 200-201). He states that lā stands here for 'an lā, and that the Hijazis only used in such eases the indicative while others used the apocopate.

nn Zamakhsharī (Mufaṣṣal, p. 147) says that some Arabs used the indicative even after 'an. The Meccans Mujāhid or Ibn Muḥaiṣin read so in ii, 233: 'arāda 'an yutimmu r-ridā 'ata 'he wants the suckling to be completed', where the others read yutimma. Another example is a line by the Thaqafi 'Abū Mihjan: 'akhāfu ... 'an lā 'adhūquha (in rhyme) 'I fear ... I shall not taste it' (Tabarī, Annales, i, 2316). Perhaps we ought not to take indicative after 'an as a feature of the Hijaz dialect, but rather say that these Hijazis, being accustomed to asyndetic clauses with the indicative, occasionally used

the indicative in the unfamiliar 'an-clause as well. In the case of the Koranreading, there may have been tanāquā al-qirā atain, conflation of two readings: 'arada yutimmu and 'arada 'an yutimma. In an anonymous line (Khizāna, iii, 559): 'an taqra'āni . . . wa-'an lā tush'irā 'that ye call . . . and that ye let no one notice', there may be no more than poetic license. Ru'āsī (quoted by Suyūţī, Jam', ii, 3) states that 'the fuşahā' among the Arabs use the subjunctive after 'an, below (dūna) them are some who use the indicative, and below those some that use the apocopate'. The use of the apocopate is ascribed by Lihyānī (quoted by Ihn Hishām, Mughnī, i, 29) to the Banū Sabbah of Dabba. It seems to have been more widespread in East-Central Arabia. One case of it is in a line by Imrulqais (iv, 40),34 another in a line by the 'Udhrī Jamīl (Shinqītī, ii, 3). Lihyānī (in Suyūtī, Jam', ii, 4) goes on to say that some Arabs have the apocopate after lan, a construction permitted for literary usage by Ibn al-'A'rābī. In Sbinqītī (ii, 4) Liḥyānī is quoted as saying that some Arabs yujzimūna n-nawāsiba wa-yunsibūna l-jawāzim 'use the subjunctive where others use the apocopate and vice versa'. It must be pointed out that in the two shawahid the apocopate is not dependent on verbs of command, so that the construction there is not to be identified with that discussed in § Il above. Perhaps those dialects had no subjunctive, but employed the apocopate in dependent clauses, like Ethiopic.

oo Though the Arab grammarians refused to admit it (cf. Ibn Hishām, Mughnī, i, 59), there is little doubt that 'immā served as simple 'if' in Arabic. It is the cognate of Ethiopic 'emma. ** The examples collected in various grammars are exclusively Western: Koran (xix, 26 & fr.), 'Aswad b. Ya'fur of Naḥshal (Mufaḍḍaliyyāt, p. 451); the Ṭā'ī Jābir b. Rālān (Ḥamāsa, p. 300, line 1); Ḥassān b. Thābit (xiii, 14); the Western Qaisīs 'Antara (ii, 22) and Labīd (xlvii, 19), etc. We may thus claim the form for West-Arabian. Whether 'in was also genuine West-Arabian or imported along with Classical Arabic is impossible to say. In the instances quoted the indicative is used.

pp According to 'Akhfash (quoted by 'Astarābādī, Kāfiya comm., ii, 118) only the Hijaz knew mundhu 'since', while mudh was used both in Hijaz and elsewhere. The Koran contains no instance of either. A form mindhu is independently attested for some part of the Sulaim dialect by 'Abū Hayyan (Manbaj, f. 172a). He also quotes Lihyānī as saying that the Banū 'Abīd of Ghanī said mudhu (cf. also 'Astarābādī, loc. cit.). This looks like a compromise between Eastern mudh and Western mi/undhu, as does also midhu, ascribed to 'Ukl. A form mudhi before hamzat al-waṣl is said to be used by some.

qq There seem to have been also differences with regard to the rection of this particle. The Kufan grammarians are quoted by 'Abū Ḥayyān as saying that the 'Asad and Tamim used the nominative after mudh (Liḥyānī adds

Dabba, Ribāb, 'Abīd, and Sulaim) while the Muzaina, Ghațafān, 'Āmir' and the neighbouring Qais tribes used the genitive (cf. map No. 17). 'Akhfash says Hijaz used the genitive, Tamim the nominative, It is impossible to say how this information is related to the distinctions between the use of nominative and genitive drawn by the grammarians (cf. Wright, ii, 173), but it seems that the latter are rather artificial. Reckendorf (Syntakt. Verhältn., p. 237) analyses ra'aituhu mundhu (=min-dhū) yaumāni as 'I saw him; from that it is two days'. Accepting the identification of dhū with the demonstrative, I should prefer to connect its use in mundhu with the zeh employed with expressions of time in Biblical Hebrew (cf. Gesenius, Grammar, p. 443) and to translate 'I saw him from-it is two days' as in Hebrew (Gen., xxvii, 36) 'he hath supplanted me-it is two times'. In phrases like mundhu yaumu l-jum'ati 'since Friday' the original function is obscured and the way prepared towards equating mundhu with min and construing it with the genitive. 36 If the Western dialects have thus deviated from the earlier syntactical construction of the particle, they did keep the older form. Indeed it appears to me that even the Eastern form can be explained most easily as having arisen under West-Arabian phonetic conditions. The Eastern form of the demonstrative pronoun was dhā, which hardly could have been reduced to -dh or -dhū, but in West-Arabian it had the form dhi (cf. § 7 u, 12 e), which could in the normal phonetic development (§ 10 ii) be reduced to dhi. The resulting *mindhi was transformed to mundhi through the influence of the labials, and the final i, being a neutral vowel (as it could be elided altogether) was assimilated. Again by a law so far observed only in the West (§ 11 qq) mundh(u) became mudhdh(u), and this became mudh by simplification of final gemination. These changes may have taken place in those Qais dialects which we have already seen as home of certain developments of Classical Arabic, and reached the literary language of the East in this form.

rr In supplementary questions with man meaning 'which' the Hijazis put the noun following man in the same case as in the original statement. Thus, on being told ra'aitu Zaidan 'I saw Zaid', a Hijazi might inquire man Zaidan 'Zaid who?', while other Arabs would presumably have said man Zaidun (Sībawaihi, i, 356). This is an interesting observation of colloquial usage which it will hardly be possible to check from our literary sources. Sībawaihi asserts that only proper names could be so treated, but 'Astarābādī (Kāfiya comm., ii, 63) quotes a statement of Yūnus, handed down by Mubarrad and not found at any rate in the printed Sībawaihi, that one could also say man 'akhā Zaidin 'Zaid's brother who?'

ss Rāfi'i (Tārīkh, i, 145) says that the inflected man used mainly in supplementary questions: manū, manū, manū, manūna, etc. (cf. Wright, i, 275) was used in the Hijaz dialect. Unfortunately he does not quote his

source. If correct, this would connect the Hijaz dialect with Ethiopic $mann\bar{u}$ acc. manna and Accadian $m\bar{i}nu.^{37}$ Forms with $-\bar{u}$ are still used as subject-forms in colloquials, e.g., 'anu by Palestinian Fellahin, manu in Aleppo (Driver, Grammar, p. 38).

NOTES

- ¹ On the other hand 'Abū Zsid (Lisan, iv, 386) asserts that the Tihāma dislect forms 'uḍud, 'ujuz (cf. § 10 h) are always masculine, while the Classical 'aḍud, 'ajuz can be either gender.
- ² Ibn 'Athīr (in Lisān, i, 380) alleges that *dhahab* 'gold' was ferninine in the Hijaz dialect. But this is mere assumption (cf. 'Azharl, *ibid.*) due to failure to recognize attraction in Koran, ix, 34.
- * Sibawaihi: the Medineans; Ibn Hishām: the Meccans, Medineans, and 'Abū Bakr; Baidāwi: Nāfi', Ibn Kathīr, and 'Abū Bakr. Ibn Mas'ūd read 'in kullun illa, as all do in xxxviii, 13/14 (Jeffery, Materiala, p. 48; other readings ib., p. 137, 344).
 - 4 So in Ibn Ya 'ish (p. 1131); in the Diwan rewritten so that both have disappeared.
- ⁵ Unless otherwise indicated by the spelling, I am mechanically writing the nominative in the quotations now following; of course they may have been written with the intention of accusative.
- Lyall, in his translation, takes 'in as conditional particle, Reckendorf (Syntax, p. 129) as alleviated 'in.
- ⁷ The context suggests that 'in is conditional; Zamakhshari (Mufaşşal, p. 138) takes it as alleviated 'in because of the la-.
- In this line: 'ataghdabu 'an 'udhnā Qutaibata huzzatā / jihāran wa-lam taghdab li-qatli bni Hāzimin 'art thou wroth that the ears of Qutaiba were notched publicly, and srt not wroth at the murder of Ihn Hāzim?', 'Aşma'l and the Kufans take 'an as s conditional particle, others read 'in; Mubarrad takes it as 'an muhhaffafa. Here we have s clear case of nominative after the slleviated forms.
 - ⁴ Assimilation before k, q, and j is accepted as normal by Sibawaihi (ii, 465).
- This shows that the assimilation of n in the roots lar n took place at a very late time, after the gutturals had lost the sbility to be doubled. The latter development is itself rather late (cf. Sievers, Metrische Studien, i, 300; Bergsträaser, Hebr. Gramm., i, 152). This is also proved by the preservation of n in cases like $linp \delta l$ (Bergstr., ib., 108) where the shewd disappeared rather late. In the imperfect mph'dl the n was assimilated much earlier.
- ¹¹ Here the preceding phrase 'alima 'alian talışühü 'he knows that you will not count it right' may have exerted some influence.
- 12 The nominstive in the line by Farazdaq: fa-lau kunta Dabbiyyan 'arafta qirābatī/ walakinna zanjiyyun 'aṣīmu l-mashāfiri 'if thou wert a Dabbi, thou wouldst recognize me as a relative, but (thou art) a negro with thick lips' (ed. Ṣāwi, i, 262), is not of this kind. The second hemistich is a one-term nominal clause. However, in a similar line by the Bāhilī 'A'shā (ed. Geyer, elxxxvi=Slbawaihi, i, 243) the accusative appears by attraction.
 - 23 Only the Kufans take here kāna ss tāmma.
- ¹⁴ Fischer (ZDMG, lxi, 936 and lxiii, 597) cites further cases from Mutanabbl and Maqqari, but they are too late to prove anything.
- 18 Reckendorf (Syntakt. Verhältn., p. 331) calls these rules 'a veritable exhibition-piece of medieval scholasticism'.

3

- ¹³ As quoted by 'Astarābādī (Kāfiya comm., i, 267) and Khizana (ii, 130); in the editions the words wa-ba'du n-nāsi yansibūna mithlahum, or the like, have fallen out.
- ¹⁷ Baghdādī (Khizāna, ii, 130) denies that Farazdaq could have committed a solecism because 'a bedouin cannot make his tongue pronounce a wrong form'.
- ¹⁸ Only the Dabba dialect made laisa into a normal verb by conjugating lustu or listu (Taj, iv, 244).
- 18 The derivation of md from the interrogative pronoun (Reckendorf, Syntakt-Verhältn., p. 83) makes little sense in nominal clauses. Perhaps it is to be connected with the Egyptian 'negative verb' iml, and its verbal rection explained as a last remnant of its origin. Hebrew mah serves to express prohibitions (Cant., v, 8, viii, 4; Ecclus., xiii, 2, xxxii, 4), just like Eg. m (cf. Garoiner, Grammar, p. 260). (I wish to use this opportunity to thank Professor G. R. Driver for pointing out to me the existence of negative mah in Hebrew).
- *6 In 'AinI (Maqāṣid, ii, 145) this has become a controversy between Basrians and Kufans.
- ³¹ In the Manhaj, p. 65-6, the verse is mentioned, but the explanation quoted is not given.
- ³¹ There are instances of la... bi- (though there are none of 'in... bi-): twice in co-ordination in a line by Isma'il b. Yasār an-Nasā'ī, a contemporary of 'Abdalmalik ('Aghānī, iv, 118, line 6), and without co-ordination in a line by Ḥuṭai'a (lxviū, 5=ZDMG, xlvii, 77).
- In the notes appended to the Diwan the line is not given as Hatim's, but as made by a man of the Bana Nabit of Medina—which makes the remark even more pointless.
- ¹⁴ It has thus the same function as Mishnaie Hebrew and Syriac 'ellā 'but', German sondern.
- 13 The verse la ya'lamu man fi s-samāwāti wal-'ardi l-ghaiba 'illā llahu 'no one in heaven and earth knows the Hidden except God' (xxvii, 66/65) is taken by Ibn Mālik (quoted Khizāna, ü, 134) as an example of the Tamimi usage in the mouth of a Hijazi. But surely the reasona for taking it as istithnā' munqaji' are purely theological.
 - ⁸⁸ For Koran, xxxvi, 28/29, cf. § p above.
- ⁸⁷ The only case with *istithnā' mufarragh* and accusative is Koran, xvii, 95/93. Though a rhetorical question, it was perhaps conceived as a real question and has therefore the regular accusative.
- ¹⁰ I will be forgiven for using the term extraposition (originated by Jespersen) rather than casus pendens, nominative absolute, etc., which suggest quite wrong conceptions.
 - ³³ There was no doubt some subtle difference of meaning which we cannot appreciate.
- ³⁰ We may compsre Hebrew $h\delta$ 'il, which means 'begin, comply, dare', etc. All these meanings seem to go back to 'to be able', and the word to be a cognate of the Hudhail dialect word 'alā' to be able' (Ibn Duraid, Jamhara, i, 188). Cf. Melilah, ii, 253.
- ¹¹ In spite of the objections of Brockelmann (GVG, ii, 514, n. 1) and the difficulty of the relation of the sibilants, it seems worth while to reconsider whether 'asā is not connected with Hebrew 'āiāh (which perhaps at first also meant 'to have strength to').
- ⁸³ This line, which is given Wright, ii, 27A as example of the subjunctive in asyndetic clauses, is cited with the indicative by Baidawi (i, 70), Sibawaihi, and Tabrizi (Ḥamāsa, p. 438). Cf. De Goeje's note on Wright.
- 18 Baidāwī gives a rather artificial explanation in order to avoid admitting the construction.
- ³⁴ Quoted with ya'tinā by the grammars (cf. Shinqīṭī, ii, 3) and Yāqūt (i, 160); in the Diwan corrected into ya'tiya.

- ** Probably also of Hebrew 'im. If this had been original *'im, it would have become *'èm. The absence of lengthening cannot be due to its being proclitic: the other two instances of this adduced by Bergsträsser (Gramm., i, 148), min and 'im, are in inflection minn- and 'imm-. Perhaps 'immā and (h)in were originally disparate, and only contaminated in course of time.
- ³⁶ The next stage would be to replace mundhu by min. This happened in a line by the Westerner Zuhair (iv, 1; but some consider it forged, cf. Schawahid-Indices, p. 105, a, 23). The substitution was carried out in the colloquial of Harirl's time (cf. Durra, ed. Thorbecke, p. 76) and is complete in the colloquials of to-day (Brockelmann, GVG, ii, 542).
- ³⁷ In Ugaritic the word for who is written my. As y must be a consonant, this points to its having been inflected: miyū, miyī, miyū. Gordon's reconstruction miyū (Grammar, p. 32) for the nominative appears to have little support from forms in cognate languages.

Chapter 14

TAYYI²

a The Tayyi' were not a considerable tribe at the time of the Prophet. In their home, the region of the present-day Ha'il, they were cut off from the Fertile Crescent by the Nefud desert and their political contacts were principally with the tribes of Najd, such as the Tamim clan of Yarbū', whom they fought at Rijlat at-Tais. Yet it was the Tayyi' who supplied to Syrians, Bahylonian Jews, and Persians the name for the whole of the Arab race (cf. also Bailey, JRAS., 1939, 89). This suggests that in earlier times their area was much larger and covered part of the territory of the later Quda'a tribes. If this was so we might expect to find some traces of this hoth in the language of those tribes and in the topography. Unfortunately we know very little of the dialects of the Quda'a, who, in the words of Lammens (Arabie Occidentale, p. 308) appear to have lived outside the general development of the peninsula, one might almost say outside Arab life'. Some of the known features, however, connect the Quda'a with Tayyi', others, such as the taltala, with tribes still further east; in such cases the Tayyi' may have acted as link. Of place names suggesting a connection I have only the one instance of al-'audātu, in the territory of Kalb (Nöldeke, Zur Gramm., p. 23). If this is the same as al-'audiyatu 'the Wadis', then it shows a sound change typical for the Tayyi' dialect (cf. § i below), and might be taken as evidence of earlier Tayyi' occupation.

b Genealogically the Tayyi' are counted among the Yemenite tribes, and the usual accounts were given of their emigration from Yemen. Their former home was to have been located in the Yemenite Jauf, i.e., near the Northern Yemenite tribes, with whose language the Tayyi' dialect shows some affinities. These can of course be explained in this way, but one might also say that both dialects have preserved older West-Arabian features which were given up by the Hudhail and Hijaz dialects, which were more in contact with Najd.1 About the previous inhabitants of the Tayyi' country, two traditions existed. The more common one was that the Tayyi' expelled the 'Asad (cf. Caussin de Perceval, Essai sur l'histoire des Arabes avant l'Islam, i, 103). The other is preserved by Yāqūt (Mu'jam, i, 127): the former inhabitants of the Jabala Tayyi'in were called Suhar. The Tayyi' overcame them, but took over their language, so that the Tayyi' dialect is the language of Suhar. The name occurs as name of towns in Oman and in Yemen; 2 in the latter country, near Sa'da, there was also a tribe of that name (Hamdani, Jazira, p. 119). In Yaqut (iii, 368) it is said that the Şuhar were part of Quda'a, and they are identified with various tribes of that group. The

idea of a linguistic 'substrate' is rather striking, but may perhaps explain

some of the peculiarities of the dialect.

c The Shammar bedouins, who inhabit the Tayyi' area to-day, consider themselves descendants of that tribe. Little is known of their speech. The few items of information collected by Cantineau (Parlers, p. 230 seq.), do not on the whole suggest a close connection, except possibly for the trait discussed in § f below. Further investigation of the Shammar colloquial would in any case he highly desirable.

d Vollers (Volkssprache, p. 7) says that the Tayyi' dialect was not included among those constituting the "Arahiyya'. Nöldeke (Neue Beiträge, p. 5, n. 1) asserts that it was always included. The dialect figures in the list of 'correct' dialects by the philosopher Alfäräbi's, though it is last in the list. That the Tayyi' took part in the literary movement which carried the Classical Arabic language is proved by the comparatively large number of pre-Islamic Tā'i poets, whose works the philologists unquestioningly accepted as evidence for correct usage. The dialect shares with Hijazi the distinction of having one of its peculiar features, the dhū Tā'iyya (§ v below) admitted as a provincial variety of correct Arabic.

e Ibn Qūtiyya (Libro dei verbi, p. 5) reports that the Tayyi' had tawassu' mina l-lughāt, which may either mean 'a profusion of dialects' or 'a profusion of dialect peculiarities'. It is impossible to make anything of this statement

in its isolation.

f A general description of the character of the Tayyi' dialect may be concealed in the term qut'a. This is said in Lisan (x, 159) to denote a propensity for violent shortenings of words in the vocative, such as ya 'aba l-haka for yā 'abā l-hakami. Such tarkhīm forms were however found in poetry of all tribes, and there is nothing in Tayyi' poetry to suggest any greater tendency in this direction. In non-Tayyi' poets such forms are found, at least by the philologists, also outside the vocative. Thus the Lisan (xx, 162) mentions al-manā for al-manāzilu in a line of al-'Akhţal's and al-hamā for al-hamāmu in one by al-'Ajjāj. Moreover, the statement in the Lisan adds that al-qut'a is something like the 'an' ana of the Tamim dialect. The latter term is mostly applied by the grammarians to a tendency of making 'alif sound like 'ain, but probably refers to some more general phonetic feature (cf. § 8 q). The Shammar colloquial of our day exhibits a tendency to weaken and elide final t, m, n, l, r, and y (Cantineau, Parlers, p. 230), thus depriving a great number of words of their final consonant. Such a procedure might well be called 'the cutting-off'. It is perhaps not accidental that the one example quoted by the Lisan should have a final m. This feature may possibly also explain the development described in & z below. In the Yemenite colloquial final m, n, and l are weakened (Rossi, RSO, xvii, 236). Perbaps we are here faced with another common

TAYYI' 195

West-Arabian feature. One difficulty is to understand how the qut^a tallies with the preservation of the feminine -t (§ y below).

g There is no evidence that the Tayyi' dialect shared the tendencies of the Eastern dialects for elision of short vowels, assimilation, and vowel-harmony, due to the peculiar nature of Eastern Arabic stress (cf. § 10 m). Actually it can be observed that these tendencies are weaker in the dialect of 'Asad, the closest neighbours of Tayyi', than e.g. in the Tamim dialect. Thus no instances of vowel-elision ever seem to be recorded for this dialect. Still, the absence of these features fits in well with the generally West-Arabian character of the Tayyi' dialect.

h The lesser phonetic unity of the word in the Tayyi' dialect is also proved by the statement of a Ta'i, said to have been Hatim (Hatim, No. iii): lā 'arsū wa-lā 'atama'dadu. This is explained in the commentary as 'I do not say zagar for sagar and zirāt for sirāt, and I do not pretend to be of Ma'add'. This substitution of x for s in the neighbourhood of-not in contact with—an emphatic is generally declared to be a peculiarity of the dialect of Kalb (Zamakhshari, Muf., p. 177; Lisan, vi, 37). Exactly the same change is still found in the colloquial of Palmyra, on ancient Kalb territory, where saqf 'roof' is pronounced zaqf, saqife 'lintel' is zaqife, and even the $s\bar{a}d$ of the bedouin loanword gamas (g=q) becomes z in gamas 'to gallop'. In contact with q, on the other hand, z becomes s, as in sqoq < zuqaq 'lane' (Cantineau, Dialecte arabe de Palmyre, p. 50 seq.). A pointer to the explanation of this phenomenon is given in the colloquial of the north-Transjordanian town of es-Salt, where in the neighbourhood of emphatics the difference between s, z, and s is suspended: zirāt, sirāt, or sirāt 'way'; zagar, saqar, or şaqar 'hellfire', etc. (Littmann, Volkspoesie, p. 4). The principle at work here is the phonological tendency, so well observed by Cantineau at Palmyra and in the Syrian desert (Dialecte arabe de Palmyre, p. 39 seq.) which makes the whole word either emphatic or non-emphatic, and in the first case turns all consonants into emphatic ones (such dialects have a complete set of emphatic6 consonants covering all places of articulation). In the dialect of the Banu 1-'Anbar b. Tamim this had given rise to forms such as sūq for sūq 'market', sawīq for sawīq 'gruel' (Ibn Sikkīt, Qalb, p. 42; Jamhara, iii, 44). The last form is also recorded for the Banū 'Amr b. Tamīm (Yūnus, quoted by Ibn Sallām, Tabaqāt, p. 12). In point of fact such forms were much more widespread, as evidenced by the widely used sirāt for sirāț < Latin strata. Khalīl (quoted by Qastallānī, iv, 3) states that in correct Arabic every sad preceding a gaf in the same word could alternate with sin. In the Kalb dialect another factor came into play: that sad was a voiced sound.7 The existence of voiced sad in some dialects is attested by Ibn Khalawaih (quoted Rafi'i, Tarikh, i, 109). An s which became emphatic in this dialect would thus at the same time have had to become voiced. There

are some difficult points in this connection: Why did the tendency affect s rather than other consonants? Why did it, at least according to the philologists, operate with qāf more than with other emphatics? Finally, if the ṣād of the Kalb dialect was voiced, it became unvoiced somewhere in the history of the modern colloquials of that region. Why, then, did the z created by the velarization of s lose its emphatic character rather than its voice, and thus become dissociated from the old s? Whatever answer we may give to these questions, there is little doubt that the sound-change is connected with the greater unity of the word created by the expiratory accent, and that its absence in the old Tayyi' dialect is significant.

I While we know nothing about the simple vowel-sounds of the dialect, we are aurprisingly well informed about the sound change $iya > \bar{a}$, no doubt mainly for the reason that Tayyi' poets used such forms, and that they could not be tacitly corrected because of the metre. Sihawaihi (ii, 317) mentions rudās for rudiya 'was well received' and nuhā for nuhiya 'was prohibited' as permitted Classical forms, and knows nothing of their connection with the Tayyi'. In later works the forms are unanimously ascribed to the Tayyi' dialect. Instances are too numerous to permit enumeration in full. E.g., rudā in a line by Zaid al-Khail, secured by the rhyme (Jamhara, ii, 143); walā for waliya 'was near' (Mufaddaliyyāt, p. 767); baqā for baqiya 'remained' in a line by Zaid al-Khail (JRAS, 1907, p. 859); radā for radiya 'was pleased' (Hamasa comm., p. 77).10 The a was shortened in the feminine, as in bunat 'was built' in a line by an anonymous Tā'ī (Hamāsa, p. 77); baqat 'remained' (Sahāh, ii, 448). The same change took place in the feminine of participles, and participial forms, e.g., khāzātun for khāziyatun fem. of khārin 'eompaet' (Lisān, xviii, 254); nāṣātun for nāṣiyatun 'foreloek', ef. Mishnaie Hebrew noṣāh 'hair, down'11 ('Abū 'Uhaid, Gharîbal-muṣannaf, quoted Suyūțī, Muzhir, i, 141; Ibn Sīda in Lisān, xx, 200 with shāhid by Huraith b. 'Annab); badatun 'desert-dwellers' and qaratun 'village-dwellers' (Lisan, xx, 38, 200); jārātun for jāriyatun 'girl' (Farra' in Lisan, xx, 268). Of non-participial nominal forms I know only of the one, tausatun for tausiyatun 'testament', verbal noun of the second conjugation (Farra', ibid.). To this we may add the 'audātu mentioned in § a above.

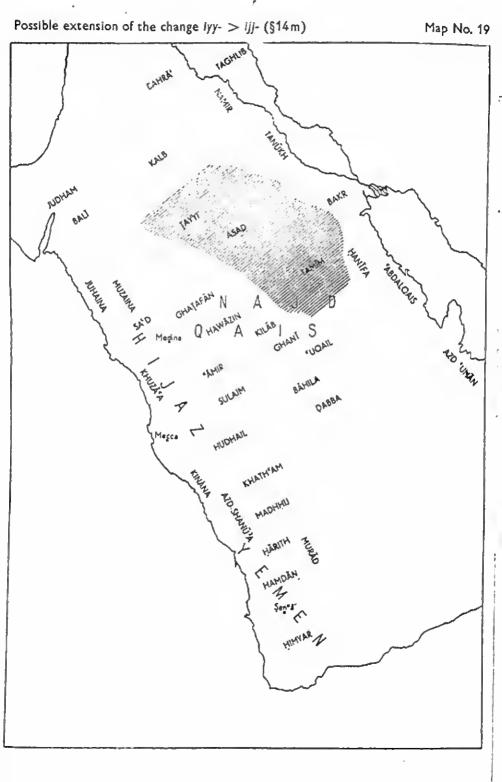

k Forms of this type are by no means restricted to the Tayyi' dialect alone. This is stated in a general way by Ibn Sallām (Ṭabaqāt, p. 12): 'baqā and fanā... are forms of the Tayyi' dialect. The Arabs used them in their speech, but in the Tayyi' dialect they are more common'. It is very doubtful whether we can accept it in this general way. It is perhaps not astonishing to find the same change in forms used by poets of the Muzaina tribe, the neighbours of Tayyi', though reckoned among the Quda'a. Thus Ma'n b. 'Aus uses 'ukhlā' was reserved' (ed. Schwarz, vii, 1), 12 and Zuhair uses fanā 'passed away' (Ibn Sallām, Ṭabaqāt, p. 12). The Muzaina dialect may have

shared the same phonetic development. As we never hear that this sound change took place in the Qais dialects or in Najd it is, however, surprising to find similar forms in the work of poets from the other extremity of Najd. Thus Tufail al-Ghanawi uses nuhā 'is stopped' (Sibawaihi, ii, 317, not in his Diwan), and fanā 'passed away' (JRAS, 1907, p. 859). The Kindi Imrulqais, one of the earliest poets known to us, uses in one line (xxix, 2) the form banatun 'eleaving to the string', of a bow: this is generally explained as standing for bāniyatun. This poet is said to have spent some time in Tayyi' territory, hut it is most unlikely that he should on that occasion have picked up the local speech. The unanimity of our sources in ascribing the soundchange to Tayyi' hardly permits us the assumption that it had taken place all over Najd. The only conclusion remaining to us is that right at the very outset of Classical Arabie poetry the Tayyi' form had become recognized as a provincial alternative which could be used as poetic license. This speaks for attributing to Tayyi' an important place in the formation of the early 'arabiyya. The sound-ehange itself seems not to have been restricted to Tayyi', however, but to have been eommon to the northern half of West-Arabian.18 At least we are told on good authority that the same change had taken place in the Harith dialect in northern Yemen (§ 7 d). The Hijaz dialect may have possessed the same form, but it was replaced by baqī (ef. § 12 w). 14 The sound change was common to northern West-Arabian and Canaanite, where we find in Hebrew bonah < baniyatu as feminine of boneh < baniyu. This sound-ehange offers also in my opinion the least forced explanation for the fact that the third singular masculine perfect is represented in Hebrew not by the expected *bano < bana, but by banah; so already in the Tell Amarna letters qabā 'he said', laqā 'he took'. In all other persons the verbs tertiæ yodh were in Hebrew throughout conjugated after the pattern of the neuter, so already in Tell Amarna baniti, lagiti (ef. Böhl, Sprache der Amarnabriefe, p. 47). There is no reason why only the third singular should in all verbs have the active form. If *baniya became bana after the change $\bar{a} > \bar{o}$ bad ceased to operate, it is easy to account for the final \bar{a} of the form. It seems to me that this explanation offers some advantages as against the ones based on analogy, found in the existing grammars. For a more detailed discussion of the Hebrew side of the problem, see Melilah, ii, 247 seq. In Hebrew there are also oceasional forms with consonantal yodh, such as bōkhiyāh (Thr., i, 16).15 These may be due to analogy, but may also represent the usage of a part of the Hebrew-speaking area where the soundehange had not taken place, or the non-Canaanite element if we accept the idea of Hebrew as a mixed language. In any event, the change is dateable in Canaanite, as both in the third singular maseuline perfect and in the feminine participle it must have taken place after the eessation of the first ehange of ā to ō (ef. § 10 s), i.e., certainly after West-Arabian and Canaanite

had begun to emerge as separate languages. We must therefore assume that part at least of the West-Arabians remained in close enough contact with speakers of Canaanite to be affected by a sound-change which took place within that language. This is not the place to work out the historical implications of this, especially as it affects the darkest part of Arab history. Cf. map No. 18.

I The change $iya > \bar{a}$ seems not to have been the only one affecting y between vowels. According to Ibn Mālik (Tashīl, f. 77a) the $y\bar{a}$ ' of the imperfect suffix, if preceded by a, was dropped before the $n\bar{u}n$ energieum. This means apparently that $tar\dot{q}ayinna$, the energicus of $tar\dot{q}aina$ 'thou (f.) desirest', became $tar\dot{q}anna$. In fact the only instance of such a change that I know is la-tughninna for la-tughniyanna 'thou art sufficient' in a line by Huraith b. 'Annāb (Shinqīṭī, ii, 45). There we would have a case of iya > i with shortening in closed syllable. However, if the suggestion put forward in $\S dd$ below, according to which i in the imperfect of tertiæ y became i in the dialect, is correct, the word in question should be read la-tughnanna, from *la-tughnayinna, and would bear out Ibn Mālik. Only further instances can decide what is right bere.

m According to Farra' (in Taj, ii, 2) the dialects of Tayyi' and part of 'Asad turn y into j in the neighbourhood of 'ain. Others (also Lisan, iii, 144) ascribe this sound-ehange only to the Quda'a. The stock example is hadha rā'ijja kharaja ma'ij for hādhā rā'iyya kharaja ma'ī 'tbis herdsman of mine went out with me'. It will be noticed that in rā'ijja it is a geminated intervocalic consonantal y which becomes jj, in ma'i there is no y at all (except in Arabie writing), but a long i becomes somehow if under the influence of 'ain. This feature is nearly everywhere confused with a well-attested soundehange of the Tamim dialect: iyy->ijj-, as in 'ijjal for 'iyyal 'mountain goat', Fuqaimijjun for Fuqaimiyyun 'member of the Fuqaim clan of Hanzala' (Sibawaihi, ii, 314, 342; Şaḥāḥ, i, 141, etc. and § 8 t). This bardening of yy16 may also have occurred in the more westerly dialects mentioned, but it is very doubtful if they ever had the change connected with 'ain. It seems rather as if this was guessed from the word 'aj'aja which was used to describe some characteristic of the Quda'a dialect. In the Lisan passage, the 'ai'aia is said to be similar to the 'an'ana of Tamīm, which has been discussed above (§ f). Just as the latter term originally described the general impression Tamim speech made upon critical neighbours, and the philologists guessed that it meant the change of 'an to 'an, so 'aj'aja must have been a general term. Since 'ajja means 'to shout', it most likely denotes some peculiarity of Quda'a intonation. Farra' is the only one to apply the term to Tayvi'. Perhaps he really bad in mind the change iyy->ijj- and guessed that 'aj'aja referred to it. It remains very doubtful whether we can take Farra's statement as evidence that the change of iyy- to ijj- occurred in Tayyi'.17

- n The Tayyi' said hauthu instead of haithu 'where' (Lihyānī in Lisān, ii, 444; Ibn Hishām, Mughnī, i, 116; in some sources the form is declared to be Tamimi) and 'aunuq for 'ainuq 'she-camels' (Ṣafadī, Lāmiyya-comm., ii, 41). Against this the dialect had mahaitu for mahautu '1 erased' (Lisān, xx, 139). We can neither conclude from this that the tertiæ wāw and the tertiæ yā' had coincided in this dialect as they did in Hebrew, nor that ai and au were confused. The form hauthu, as well as other irregularities with w and y, occur in the Hijaz dialect (cf. § 11 i). On hublau for hublā see below (§ ee).
- O Various cases of substitution of b for m and vice versa are attributed to this dialect. They said habaltu for hamaltu 'I carried' (Maidānī, quoted Freytag, Einführung, p. 98) and majaha for bajaha 'to rejoice' (Bräu in Enc. Islam, iv, 62418). The same confusion is more commonly attributed to the dialect of the Bakr or of the Māzin b. Bakr (e.g. al-Fāsī in Tāj, i, 142) and forms the subject of anecdotes (e.g. 'Aghānī, viii, 136). It occurs in South-Arabian (as in bn for min), in Amharic (Praetorius, Amh. Spr., p. 57), and in Mishnaic Hebrew (Segal, Diqdūq leshōn ba-Misbnāh, p. 38), e.g. Yabhneh—'Ιαμνια. Kofler (WZKM, xlvii, 71) gives a list of cases in Arabic not referred specifically to any dialect. Perhaps the change was not dialectal at all; certainly it was not carried through consistently in any dialect. Its special connection with Māzin b. Bakr may derive from their employing the dissimilated phrase bā smuk for mā smuk 'what is thy name', which in the form bismak is heard to-day at Ṣan'ā (Rossi, San'a, p. 8).
- p The Arab philologists say that the Tayyi' turned ss and ss into st, st, because the Tayyi' said tast for tass 'cup' (Farra' in Ṣaḥāḥ, i, 124) and last for lass 'robber' (ibid. and Liḥyānī in Lisān, viii, 356), the latter form being used also by some Medineans. There is of course no sound-change here, but the two forms are nearer to the original words in the languages from which these words were borrowed: Persian dast and Greek lēstēs. In the Tayyi' dialect these more archaic forms may bear witness to the time when that tribe was still in close contact with the non-Arab world.
- q There are some instances of 'ain becoming 'alif. Farrā' (quoted by Ibn Sikkīt, Qalb, p. 24) gives this as a general rule for the dialect and quotes as instances da'nī 'permit me' and ta'ālahu 'He is exalted'. 'Azharī (in Tāj, x, 12) knows notbing of the existence of this change in the Tayyi' dialect, and ascribes 'a'da 'he assisted' and similar forms to the Hijaz dialect. However, the shāhid he quotes, containing the form yu'dīhim 'be helps them' is by the Tā'ī poet Tirimmāḥ (xlviii, 8). We bave found de-pharyngalization of 'ain in Hijaz (§ 11 e) and elsewhere, and recognized it as a typical feature of West-Arabian. No information is available on the fate of h in the dialect.

r Whether this de-pharyngalized 'ain was pronounced as a glottal stop or simply disappeared depends of course on the fate of original hamza in this

dialect. On this 'Azharī (Taṣrīḥ, quoted Howell, iv, 824) says that some of the tribe sounded the hamza, others did not. One doubts whether this statement is the result of observations earried out on the spot. Indirect evidence is contradictory. On the one hand there is wākhā for 'ākhā 'to fraternize' (Nashwan, Extracts, p. 114) which presupposes the elision of intervocalie hamza (cf. § 11 ff). On the other there is in su'dad for sudad 'authority' (Ibn Duraid, Ishtiqaq, p. 130) a hamza not belonging to the root. Such an intrusive hamza was one of the features of the neighbouring Ouda'a dialect of Kalb, where one said da'abba for dabba 'heast of burden' and sha'abba for shabba 'young woman' ('Abū Zaid in Lisan, i, 14: Ibn Ya'ish, p. 1326). The hamza sign there does not necessarily represent a glottal stop, but may be an indication of a two-peak syllable which arose through the difficulty of pronouncing a long vowel in a closed syllable. This phonetic reason for the rise of the 'alif does not apply in sūdad. We may compare this to a phenomenon found by Rhodokanakis in the Zafar colloquial (Dhofar, ii, 89). There a word like shājá' may facultatively be pronounced sharagá. The factor which led in this case to the development of a two-peak syllable was the desire to preserve the length of the \tilde{a} against the tendency to shorten a long unstressed vowel. If this is the explanation of the Tayyi' su'dad it would make it necessary to assume that the word was stressed su'udádu, not as in Classical Arabic, súdadu. There is, however, quite a number of data suggesting the inscrtion of unorganic hamza in long syllables even where it is not possible to assume shift of stress. The dialect of Kab'az (sic) is reported to have pronounced sa'q instead of saq 'leg' (Mukhassas, ii, 52).10 In the Lisan (xii, 35) the passage dealing with this form appears to be corrupt, which is a pity, as apparently a dialect was specified there. In that passage a line by Jarir (which I have not traced) is quoted in the form 'ahabbu l-mu'qidani (cf. § 7 f) 'ilaika mu'sa 'the one of the two kindlers of fire (mūqidāni) dearer to Thee is Mūsa'.20 In Koran, liii, 51/50 Nāfi and Abū Amr are said to have read adani lu'la instead of adani Pūlu عادا الأولى 'the first 'Ad' (Baidāwī). Baidāwī (ii, 187) dealing with su'q for sua 'legs' says that the hamza is 'because of the damam that precedes it', i.e., that the tendency for replacing long vowels by short vowel plus glottal stop was more pronounced with u. However, in the colloquial of San'a' it is ā, not ū, which shows this tendency, as in ma'l for māl (Rossi, RSO, xvii, 234). The whole seems to be a phenomenon of intonation. One is vividly reminded of Danish and Latvian, where a glottal stop (the stod) replaces eertain tones of cognate languages.

s Ibn Sikkīt (quoted by Rāfi'ī, Tārīkh, i, 138) elaims that hamza sometimes beeame h in the Tayyi' dialect. As instances he quotes hin for 'in 'if' and lahinnaka for la'innaka 'verily thou art'. The former is also given by other authorities, but not attributed to the Tayyi' dialect (Quṭrub in Lisān,

xvi, 178; Zamakhsharī, Mufaṣṣal, p. 175), the second is mentioned hy Sīhawaihi (quoted Lisān, xvi, 173) with the curious remark that 'not all Arahs say so'. It is difficult to say whether we can speak here of a sound-ehange. The word for 'if' has an initial h in Ugaritie (Gordon, Grammar, p. 91), in Bihlical Aramaie, in Minaean, and in Qatahanian; the word corresponding to Arahie 'inna in Hehrew is hinneh. There seems to he no eon-sistent principle in the way the forms with 'alif and h are distributed over the various languages. It is however interesting to see the Tayyi' dialect agree with North-Semitic in this respect.

t The suffix pronoun of the third feminine singular is in pause -ah, in context -hā (Jamhara, i, 234). The shāhid is hy 'Āmir h. Juwain: fa-lam 'ara mithlahā khubāthata wājidin²¹/wa-nahnahtu nafsī ba'da mā kidtu 'af'alah 'Never have I seen a vile act like this committed in rage, hut I eheeked myself when I had nearly committed it'. The form mithlahā is secured hy the metre (tawīl). The distribution of the two forms confirms the theory of Brockelmann (GVG, i, 312) that Hehrew -āh is of pausal origin. Of the modern colloquials of N.W.-Arahia, the 'small nomads' have kept the form -hā, the Shammar and other camel-hedouins have -ah, while one section of the Khawālid, that living in Transjordan, has -ah after consonant, -hā after vowel (Cantineau, Parlers, p. 78, 182). Those hedouins which we may consider most closely connected with Tayyi' have thus inherited the old pausal form. In the inscription of an-Namāra, 'I'rb klh 'all Arahs' apparently also represents al-'araba kullah.

u The feminine of the demonstrative was in the Tayyi' dialect $t\bar{a}$, not the Eastern Arahic $h\bar{a}dhihi$ (ef. § 12 f). Although $t\bar{a}$ was also used in other parts of Arahia, it is expressly stated to he the Tayyi' dialect form hy 'Ahū 'Ubaid (quoted hy Freytag, Einleitung, p. 100). It may he noted that the authors of the inscription of an-Namāra used $ty = t\bar{a}$ or $t\bar{a}$, not $t\bar{a}$.

v The relative pronoun of the dialect was $dh\bar{u}$. The earliest mention of it is hy Farrā' (in Lisān, xx, 348) and hy the slightly younger Sijistānī (quoted Rāfi'ī, Tārīkh, i, 140). While Sijistānī, Ihn Mālik (Tashīl, f. 11 b), and most others (ef. 'Astarāhādī, Kāfiya eomm., ii, 41) assert that the one form $dh\bar{u}$ was used for all numhers, genders, and eases, 22 others maintain that it was inflected partly or altogether like $dh\bar{u}$ meaning 'possessor'. Farrā' tells of a heggar in a mosque at Kufa who used $dh\bar{a}tu$ for the feminine (Howell, i, 588), and quotes a line of poetry (hy the Tamimi Ru'ha, App. lxx, 1) with $dhaw\bar{a}tu$ for the feminine plural (Lisān, xx, 348). He suggests that various parts of Tayyi' might have had different usages in this respect, and this is the line followed in the eclectic grammars. The truth appears to he that originally $dh\bar{u}$ was used for all genders and numhers, like the Hehrew $z\bar{u}$ corresponding to it. By the time our records set in it had fallen out of use and was confused with $dh\bar{u}$ 'possessor' in the same way as the archaie Hehrew $z\bar{u}$

205

was confused with zeh 'this' (cf. Barth, Pronominalbildung, p. 153). In the inscription of an-Namāra, $dh\bar{u}$ is employed as relative: dw 'sr 'ltg = $dh\bar{u}$ 'asara 'al-tāja 'who tied on the crown'. In the Hejr inscription of A.D. 267 d' appears to be used as relative pronoun in the phrase: mn y'yr d' 'ly mnh = man yughayyir $dh\bar{u}$ (?) 'aliya minhu 'whoever destroys that of it which is above ground (or: written above it, cf. Lidzbarski, ZAss., xxii, 195). This d' is written just like the demonstrative d' in line 8; if we are right in our rendering, then the same confusion has happened here as in Hebrew.

w The use of $dh\bar{u}$ as relative particle again brings the Tayyi' dialect into clear connection with at least one of the constituent elements of the Hebrew language. Since Hebrew $z\bar{u}$ is poetical and archaic, it may be presumed, if we accept the mixture theory, to derive from the non-Canaanite side. Borrowing is improbable; the form must go back to the period before the separation of West-Arabian and that other language. However, the Tayyi' dialect is the only part of West-Arabian that possesses the pronoun in this form. In the south it appears in the form $dh\bar{u}$, which is probably of a secondary character (cf. § 4 aa), especially as there is some evidence of the former existence of $dh\bar{u}$ in Oman. In Central and Eastern Arabic we have alladh\(\bar{u}\), which presupposes the existence of simple $dh\bar{u}$ at some point (cf. also § 12i). In this way Eastern Arabic links up with Aramaic, where $z\bar{\imath} < dh\bar{\imath}$ is the oldest attainable form. We have thus an isogloss between Canaanite and Aramaic clearly continued through the Arabian peninsula (cf. map. No. 20).

x The definite article was am-, as at the other extremity of the West-Arabian area (Nashwān, Extracts, p. 39; Zamakhsharī, Mufaṣṣal, p. 169, 174, etc.). ²³ A verse by Bujair b. 'Atama (or 'Athma) of Baulān, which is quoted in Lisān, xx, 347 as shāhid for dhū, contains the forms am-sahmu and am-salama. For full discussion cf. § 4 x.

y According to Ṣāghānī (in Tāj, vi, 65) the t of the feminine ending was in this dialect preserved in pause. The parallel passages in Ṣaḥāḥ (ii, 15) and Lisān (x, 383) mention the preservation of t as a lugha, but do not connect it with Tayyi'. The shāhid, where al-ḥajafat 'the leather shield' appears in rbyme, is ascribed to a poet named Su'r adh-Dhi'b, about whom I could not discover anything. Another poem, ascribed to 'Abū n-Najm al-'Ijli (Lisān, xx, 361)—at any rate not a Ṭā'i—has several nouns with -at in rhyme, but betrays itself as a joke by the form mat for mah, mā 'what'. Proof for the connection of this feature with Tayyi' is thus weak. It is better attested for the far south (§ 4 p). In some of the north-western dialects t must have been preserved, since it appears regularly in Greek and Latin transcriptions of Arabic names made before 300 A.D., as Dumatha, Sabbatha, Maiphath, Odenathus (Vollers, Volkssprache, p. 158), Barechath = Buraika (Waddington, No. 2396) and in Nabataean spellings (cf. Cantineau, Nabatéen, ii, 171).

The Syriac and Byzantine authors of the fifth to seventh centuries, on the other hand, transcribe the Arabic feminine ending as -a (Nöldeke, Haus Gafna, p. 6, note 3). One is strongly tempted to connect this with the ousting of Tayyi' in this region by the Quda'a, but the material is really too scanty for any such conclusion.

z As against the possible preservation of singular -at, the t of the feminine plural ending $-\bar{a}t$ was dropped in pause (Quṛrub in Zamakhsharī, Mufaṣṣal, p. 176). This phenomenon is well attested in certain bedouin colloquials of the Syrian desert and Najd (Wetzstein, ZDMG, xxii, 182; Soein, Diwan, iii, 107; especially Cantineau, Parlers, p. 20). The purely phonetic character of the change is revealed by the position in the colloquial of the N'èm in eastern Syria, where the t is weak, but audible, and with the Shammar, the alleged descendants of the Tayyi', where the \bar{a} is followed by a weak y, e.g., $\bar{c}bgar\bar{a}^y = baqar\bar{a}t$, just as in the feminine singular perfect $kt\bar{c}b^wa^y = katabat$ (Cantineau, p. 133). It is in those colloquials part of the general weakening of certain final consonants, which we have (§ f above) also suspected to have been observed in the ancient Tayyi' dialect. ²⁴ For the possibility of the same phenomenon in the south, cf. § 7 k.

aa We have no information as to whether the Tayyi' dialect had in the prefixes of the a-imperfect i, like the east, or a, like the west (cf. § 6 i, 12 p). If our theory that the use of the i-prefixes developed in the Canaanite area and spread thence eastward into Arabia (cf. Journal of Jewish Studies, i, 26) is correct, it would not be unreasonable to assume that the Tayyi' dialect was affected, or indeed acted as transmitter of the new forms. It is, however, extremely doubtful whether we may adduce in favour of this the statement of Marzūqī (quoted Tāj, vii, 313) that the form 'ikhālu 'methinks' originated in the dialect of Tayyi'. This form, which was used all over Arabia, probably has nothing to do with the i-prefixes or taltala (cf. further § 8 bb).

bb The conjugation of intransitive verbs mediæ w is of an archaic pattern, as in Hijaz (cf. 12 s). The Tayyi' said mittu for muttu 'I died' (Jamhara, ii, 29) and mā dimtu for mā dumtu 'as long as I last' (ibid., iii, 485). The form mittu occurs in the Tā'ī poet Tirimmāḥ (i, 16). While the Hijaz dialect, as far as we know, had to these the imperfects yamūtu, yadūmu, the Tayyi' also had the corresponding imperfects yamātu, yadāmu (cf. Jamhara, iii, 485). In the case of yamātu, Brockelmann (GVG, i, 608) believes that the ā was restored by analogy, as the verb has ū in all other Semitic dialects, but it may just as well be that the more archaic dialects of West-Arabian had preserved the form yamātu. It is used in several modern colloquials (e.g., Syria, cf. Driver, Grammar, p. 91). Ibn Ya'īsh (p. 1257) states that the a-imperfect of mediæ w was pronounced with 'imāla. Though he mentions no dialect in this connection, this could hardly be the ordinary combinatory 'imāla of the Eastern dialects, as no i is present. I would suggest that these

forms, yamētu, yadēmu, etc., were current in some West-Arabian dialects, and were due to analogy with the perfect, which was there mēta, dēma (cf. § 10 y seq.). The full analogy of the pairs qumtu: yaqūmu and zidtu: yazīdu should have produced mittu: *yamītu. The yamētu described by Ibn Ya'īsh is a compromise between this and the ā required by the grammatical system, which can only be understood through the presence of a perfect mēta. We may assume that the ĕ in the third person existed in Tayyi', as in the other Western dialects.

cc The sound-change $iya > \overline{a}$ discussed in δ i above transformed the paradigm of the perfect of intransitive verbs tertiæ infirmæ, which ran in this dialect bagītu, bagīta, bagā, bagat. The form bagat for the third feminine singular is attested by grammarians and found in poetry. It is all the stranger to find an early authority like Lihyani declaring that the Tayyi' form was laquyat, corresponding to common laquyat. This occurs in a line of an unnamed Ta'i (Lisan, iv, 184): lam talqa khailun qablahā mā laqayat/min ghibbi hajiratin wa-sairin mus'adi 'no horses ever suffered what they suffered from extreme midday-heat and strenuous journey'. There follows the gloss: 'he means to say laqiyat, this is Tayyi' dialect'. The verb-form must have been preserved bere by tradition, as nothing would prevent reading lagiyat. It is curiously similar to the Hebrew hapax legomenon hāsāyāh (Ps. lvii, 2), which is just as difficult to account for. Without further data it is not possible to say whether one should really take it as a form of the Tayyi' dialect. One should also take into account the odd 'amsajat for 'amsat, which presupposes 'amsayat (cf. the note on § 14 m).

dd The verb qalā, qalā 'to dislike' had in the 'Tayyi' dialect the imperfect yaqla, yaqla (Lisan, xx, 59; Suyūţī, Sh. Shaw. Mughnī, p. 83). The shahid for yaqla in the Lisan is anonymous; the verse with yaqli is by 'Abu Muhammad al-Faq'asi, of the neighbouring tribe of 'Asad. This could be easily explained on the assumption that Tayyi' qalā stood for qaliya; such a form is indeed recorded for Classical Arabic by several authorities in the Lisan passage. However, Ibn Mālik (Tashil, f. 71 b) states that 'all except the Tayyi' had kasrā in the imperfect of verbs tertiæ yā' in which the second radical was not a guttural'. I cannot see any other meaning to this than that, where others said banā: yabnī, the Tayyi' said banā: yabnā, or rather in accordance with Westernusage (§ 10 ff) banai: yabnai. This is less surprising than it seems, since there are also some traces in Hebrew of a similar generalization of the intransitive type. The imperfect without affixes, -yibhneh, yirşeh-may go back to *yibnai, *yirdai as much as to *yibni, *yirdi (cf. Bauer-Leander, Hist. Gramm., p. 407), but tibhkeynāh for the third plural feminine can only be derived from *tibkaina. The few cases of forms with y preserved before suffixes show (in pause) all a: tibh'āyūn 'ye will seek', ye'ethayū 'they will come', ye'ethayenī 'be comes to me', altbough their

Arabic cognates have i-imperfects. In the proper names in Ya/i- from such roots, which no doubt represent often arehaic forms of the imperfeet (cf. Gees, AJSL, xxvii, 305 seq., and Rabin, Journal of Jewish Studies, i, 23) final i occurs in compounds (as Ya'dsi'ēl, Yahzī'ēl, Yir'iyyāh), but ā or ai in names not followed by a theophoric element: Yahdai, Ya'anai, Yimmah, Yishwah, Ye'dai, etc. The only exception to this is Yishwi, which however appears in the Septuagint as Iessai. The Arabic cognates of the roots contained in these names have mostly i-imperfects. It is therefore not entirely out of the question that Hebrew did at one stage transform not only the perfect but also the imperfect of the transitive verhs tertize y after the intransitive pattern. This lends some plausibility to Ibn Mālik's statement. If our argument is accepted, we would have here another instance of close similarity between a West-Arabian dialect and Hebrew in a development that certainly took place after the two languages had become separate.

ee Three forms are given in our sources for the Tayyi' equivalent of words of the type hubla: some said hublai, others hublau, both without making a difference between pausal and context form (Sibawaihi, ii, 314); those of Tayyi' who sounded the hamza pronounced hubla' in pause ('Azhari, Taşrih, quoted by Howell, iv, 824). The effect of the disappearance of hamza on the inflection of nouns in -ai and -a'u has been discussed in § 11 ee. After a noun like 'inā', owing to the fall of hamza, had taken in the genitive the form 'inai and in the nominative 'inau, hublai was drawn into the same paradigm. Some parts of the Tayyi' area may have retained the nominative as sole form, others the genitive, or Sibawaihi's informant, having heard such words sometimes in the one case and sometimes in the other, came to the conclusion that different Ta'i speakers used different forms. It is quite likely that in those districts where hamza was at least partly preserved the -ai nouns were similarly attracted into the paradigm of those with -a".

ff According to Ibn Qūṭiyya (Libro dei Verbi, p. 5) the Tayyi' dialect formed the masdar mimi of verbs primæ w on the pattern maf'al. Thus it had mau'ad for mau'id 'promise' and mauxan for mauxin 'weighing'. This must be combined with another piece of information, given by Ibn Mālik (Tashīl, f. 75 a), that the rule according to which nomina loci of concave verbs with sound third radical have the pattern maf'il, applies in all dialects except that of Tayyi'. According to Ibn Mālik, then, the Tayyi' said mauda' for maudi' 'place', etc. There seems to have been some principle of vowel-harmony or rhythm at work which favoured the sequence mau.a. as against mau.i.

gg The Tayyi' and Kalb said mini before 'alif al-wasl instead of mina (Lihyānī in Lisān, xvii, 311). For further discussion of the form of min, sec § 7 o.

hh The Tayyi', like the other West-Arabian dialects (cf. § 13 b) made the predicate of a verbal clause agree in number with its subject (Khafājī, Sharḥ Durrat al-ghawwāṣ, p. 152).

NOTES

- ¹ If we accept the idea that the West-Arabians migrated in several waves from the north to their historical habitations, we might even say that the north-Yemenite tribes, being the last wave of immigrants in that province, ought to show linguistic affinities with the Tayyi', who stayed nearest the original home. The existence of some Tayyi' in northern Yemen (cf. Wellhausen, Reste arab. Heidentums, p. 129) can be due to some of the tribe having taken part in that migration.
- ³ This is the place where the Suhari garments were made. It may be the shr mentioned in the South-Arabian inscription CIH. 407, line 19, of the time of Shammar Yuhar'ish.
- ³ In Al-'alfā; wal-hurūf, quoted Suyūtī, Iqtirāh (Hyderabad ed. p. 19). His opinion on this matter is particularly interesting, since it presumably is that of the educated non-philologist. He grants only part of T. the seal of correctness.
- ⁴ 'Anīs (Lahajāt, p. 7) gives a list of districts in Egypt whose dialects are known for eliding final consonants in pause. Further specification would be desirable, but the feature agrees well with the generally Western character of the Egyptian colloquial.
- ^a Kosler (WZKM, xiviii, 264) quotes one example of vowel-harmony: Tā'ī Sudūs as against Yemenite Sadūs (Lisān, vii, 410); but this is a clan name which may have been formed independently in each area, not, as K. thinks, the word for 'cloak'.
- Cantineau (Horan, p. 86) makes a distinction between these mufakhkham sounds and true emphatics.
- The sound of b was, of course, in ancient Arabic that of an emphatic dh, as is atill demanded in tajivid, not the x of modern Egyptian pronunciation. It may be noted here that in older Arabic each emphatic consonant corresponded to a pair of non-emphatic ones, one of which was voiced and the other volceless: t-d-t; s-x-t; th-dh-b; and (probably) sh-l-b (cf. § 4 m). It was therefore of no phonological aignificance whether the emphatic sound was produced with or without voice. This is why b can be a voiced sound in modern Yemenite colloquial and b voiced in most bedouin colloquials. (Cf. the detailed discussion by Cantineau, BSL, xliii, 111-12).
- ⁶ Similar processes may explain the fact that Assyrian singu 'chains' was taken over into Hebrew and Aramaic as xiqqim, xanqd. If sinqu is cognate to Arabic dank 'straitness' and Hebrew sinōq 'pillory, prison', we would have all three alternatives as in Arabic; but perhaps the cognate is Arabic shanaqa 'to strangle'. It is possible that the prothetic 'a of 'axiqqim (Jer., xl, 1, 4) points to an effort to reproduce an unfamiliar sound, viz., *x.
- ³ The vowel resulting from this contraction is in our sources spelled sometimes -d and at others -d. Since d was in this dialect probably pronounced ai, as well as for other reasons, it is practically certain that -d is the correct form and -d written through analogy with band and similar forms. In what follows I write -d throughout.
- 10 An instructive instance of how the philologists managed to get rid of dialect forms is a line Jamhara, i, 32 in which suqā 'was given to drink' occura. In Lisān, i, 465 the line is so reconstructed that the scrive saqā sppears instead.
- ¹¹ Cf. Mishnah Hullin, iii, 4 and Bab. Talmud Shabbath, f. 28 b. In Biblical Hebrew the word means 'pinion-feather'. The root new is of course connected with Hebrew new, Targumic Aramaic new to sprout'.

- 13 So Brockelmann (GVG, i, 619) who writes 'uḥlā sgainst the edition and Lisan (xviii, 261), who have 'akhlā.
- is It speaks for our theory that the forms in -d have completely replaced those in -iya in the Maghrib, where West-Arabian influence is strong, and have to some extent done so in Egypt, Iraq, and Spain, dialects with many West-Arabian elements (cf. Brockelmann, GVG, i, 621).
- 14 As far as I know, no noun-forms exhibiting this sound-change have been found in texts of Hijazi origin. This does not imply that such forms were not used in the dialect.
 - 16 On Hebrew hāsāyāh, cf. § cc below.
- 16 It is hardly necessary to point out that y and j are very close in articulation. Cf. Spanish jo=yo 'I', North-German tya=ja 'yes', and in the Semitic field rejim for reyim 'high', etc., in the Massawa dialect of Tigre (Littmann, ZAss, xiii, 149). Some unknown Arabic dialect accms also, like Tigre, to have hardened single intervocalic y into j. Ibn Ya'ish (p. 1390) quotes from 'Abū Zaid an anonymous line: hattā 'idhā 'amsajat wa-'amsajā 'until she and tho two of them reached the evening', for 'amsat, 'amsayā. The consonantal y, which "'amsayat must have had at one time, is not tho same as that in Tayyi' laqayat (§ cc below), but reminds one of South-Arabian.
 - 17 On the sound of jim in Tayyi', cf. the note on § 4 i.
 - 18 The Lisan (iii. 425) gives majjāh 'boastful' as a form of the Yeminito dialect.
- ¹⁶ The Meccan Ibn Kathīr read in xxvii, 44 'an sa'qaihā 'from her legs' for sāqaiha, and in xxxviii, 32/33 bis-su'qī' on the legs' ('Abū 'Amr read bis-su'ūqī), and in xlviii, 29 'alā su'qihi' on its stems', but apparently nowhere sa'q for sāq. Baiḍāwī thinks the hamsa in su'q is because of the ū, and was thence transferred to sa'qaiha. Hebrew shōq shows no 'aleph.
- ** Lisān, xv, 315 we are told that the Dabbi 'Ajjāj said 'a'lamun for 'ālamun' world' and kha'tamun for khātamun 'seal', but his son Ru'ba did not share this pronunciation. Perhaps we might see here a peculiarity of the older speakers of the Dabba dialect.
- ³¹ I have emended from the Jamhara's khubāsata 'apoils'. Suyūtī (Sh. ah. al-Mughnī) has hubāsata 'injustice'. Most texts, including Sībawaihi (i. 129), read khubāsata wāḥidin, which leaves the second hemistich in the air.
- 32 We find Ta'ls using dhū for the genitive in verse in Hamasa, p. 515, line 6 and in prose, ibid., p. 148, line 20.
- *A most peculiar use occurs in the oath of a Tā'l in Ḥamāsa, p. 148, line 20, wa-dhū baituhu bi-samā' 'whose dwelling is in heaven'. We should expect bim-samā' or bis-samā'. Is this perhaps some kind of Aramaic formula (dē-bhēthēh bī-shmayyā). It is certainly odd that such a form should have survived the vicisaitudes of copying.
- ³⁴ According to 'Ushmuni (iv, 160) the Tayyi' also said haihā for haihāt 'come on'. This would support our view that the change was purely phonetical, if one did not suspect that 'Ushmuni's statement rests on apriori grounds, not on tradition.

ADDENDA

- p. ix, Bibliography: Ḥammūda, 'Abdalwahhāb: Al-qirā'āt wal-lahajāt, Cairo, 1948. An important contribution to the problems discussed by Vollers. It uses extensively the Koran commentary of 'Abū Ḥayyān (on whom cf. p. 8), to which I have so far had no access, and which seems to contain many new data.
- p. 7, §d: In 1946 Şalāḥaddin Munajjad published a 'Kitāb al-lughāt fī l-Qur'ān on the authority of 'Abdallāh b. Ḥasanain', which is largely identical with our Risāla. I hope to deal with the various versions of this list in another publication.
- p. 27, No. 9. Cf. further G. Furlani, Rassegna di Studi Etiopici, vi, 1-11. The word may also occur in Hebrew if the emendation in 2 Sam. xxiii, 8 is right (cf. Driver, Notes on . . . Samuel, p. 364).
- p. 84, § m: An old example for this may be Assyrian andqdti "she-camels", if from a Proto-Arabian *yandqdt "suckling ones" (cf. Gen. xxxii, 16)=Arabie 'ainuq, cf. Zimmern, Akkad. Fremdwörter, etc. (1915), p. 50.
- p. 87, § r. Naḥḥās (d. 338) sacribes this to "many of Hawāzin and Hudhail" (Abū Ḥayyān, quoted Ḥammūda, p. 28).
- p. 98, § f: Cf. further J. Fück, Arabiya (1950), p. 10.
- p. 125: A story of the time of Ma'mūn (ca. 200/815), told by Tabarī, Tārīkh, iii, 1148, treats it as common knowledge that the substitution of k for q took place only in the Himyar dialect.
- p. 126, §c: Tibrīzī (d. 502/1108) claims that 'anta' is inherited from the 'Arab al-'Āriba, the prehistoric inhabitants of Hijāz ('Abū Ḥayyān, quoted Ḥammuda, p. 123). Does this perhaps mean the original West-Arabians?
- p. 142, § gg: The form na'a is in fact ascribed to the dialects of Hawazin, Kinana, Hudhail, and many Medineans ('Abū Shāma, 'Ibrāz al-ma'ānī, p. 379, quoted by Hammūda, p. 28).
- p. 158, § r: Perhaps this formation started from the perfect, where *iutaxara > *ūtaxara in accordance with § t, and then the long vowel was extended to the other tenses by analogy.
- p. 165, No. 2: The spelling -kāh is the rule in the Dead Sea Scrolls, which also contain such interesting archaisma as hū'āh, hī'āh, 'he, she', cf. Ugaritic, South-Arabian, and Spanish Arabic hūwat, hīyat.
- p. 194, § e: The Ță'i Ḥuraith b. 'Annāb (Ḥamāsa p. 650) accuses the Ță'i clan Banū Thu'ai of speaking a language unintelligible to other people.
- p. 202, line 9: According to Ḥammūda, p. 122, quoting (directly?) from 'Abū Zaid's Kitāb al-hamz, the dialect was not Kalb, but Kilāb. If correct, this would connect up with the change au>a'u in closed syllable reported for the neighbouring dialect of Ghani (p. 153). The transformation of Yājūj wa-Mājūj into Ya'jūj wa-Ma'jūj ia, on the other hand, ascribed to the 'Asad, the neighbours of Tayyi' (Farrā' in 'Abū Ḥayyān, quoted Ḥammūda, p. 125). This is exactly the same change as in Tayyi' su'dad.

Index I DIALECT WORDS AND FORMS

Note: 'ain is treated as last letter of the alphabet. Hamza, and the difference between \bar{a} and \ddot{a} , are ignored. Sh, s, etc., are separate from the simple letters.
